

## Year 11-12 Curriculum Handbook

**Clairvaux MacKillop College** 

2026 Edition

#### TABLE OF CONTENTS

Principal's Message	5
School Mission	6
History and Context	6
School Vision	6
School Values	6
Introduction	8
Senior Curriculum	9
Course 1: Queensland Certificate of Education (QCE)	12
QCE: Requirements	13
QCE: Completed Core Requirement	14
QCE Credit for Core Courses: General / Applied Subjects	14
Relaxation of Completed Core Credit	15
QCE Literacy and Numeracy Requirement	15
Queensland ATAR	16
Tertiary Entrance Pathways	17
Tertiary Studies Pathway 1 - ATAR Eligible (6 subjects)	17
Vocational Pathway 1 (6 subjects)	18
Vocational Pathway 2 (6 subjects)	19
Diploma and Advanced Diploma Qualifications and QCE Credit	20
VET and Tertiary Entrance	21
Additional Learning Options	21
Applied Subjects and VET Qualifications	22
VET Qualifications	22
QCE Credit and Qualifications from the same VET Training Package	22
Expected Minimum Results	23
Subject Selection Guide by Themes	25
Making Career Decisions	26
Essential Websites	28
General Syllabuses	29
Structure	29
Assessment	29
Subject Adjustment Schemes	30
Applied Syllabuses	31
Course 2: Queensland Certificate of Individual Achievement (QCIA)	34

YEAR 11 AND YEAR 12 SUBJECTS		38
Accounting	General subject	39
Ancient History	. General subject	41
Biology	General subject	43
Building & Construction Skills	Applied subject	45
Business	General subject	47
Business Studies	Applied subject	49
Certificate III in Business (BSB30120)	VET Subject	51
Certificate III in Fitness (SIS30321) + Optional Certificate II in Sport and Recreation (SIS20122)	VET Subject	53
HLT33115 Certificate III in Health Services Assistance		
(including HLT23221 Certificate II in Health Support Services)	) VET Subject	55
Certificate II in Hospitality (SIS20322) (embedded) / Certificate III in Hospitality (SIT30622)	. VET Subject	57
Certificate III in Sport Coaching (SIS30521) + Certificate II in Sport Coaching (SIS20321)	. VET Subject	59
CERTIFICATE IV in Justice Studies (10971NAT)	VET Subject	61
Chemistry	General subject	63
Chinese	. General subject	65
Dance	General subject	67
Design	General subject	69
Digital Solutions	. General subject	71
BSB50120 – Diploma of Business	VET Subject	73
Drama	General subject	74
Drama in Practice	Applied subject	76
Economics	General subject	78
Engineering	General subject	80
English	General subject	82
Essential English	Applied subject	84
Essential Mathematics	Applied subject	86
Film, Television & New Media	General subject	88
Food & Nutrition	General subject	90
Furnishing Skills	Applied subject	92
General Mathematics	General subject	94
Geography	General subject	96
Health	General subject	98
Industrial Graphics Skills	Applied subject	100
Information & Communication Technology	Applied subject	102
Japanese	General subject	104
Legal Studies	General subject	106
Literature	General subject	108
Mathematical Methods	General subject	110
Media Arts in Practice	Applied subject	112
Modern History	. General subject	114
y Music	General subject	117
Music Extension	, General subject	119
Music in Practice	Applied subject	121
Philosophy & Reason	General subject	123
Physical Education	General subject	125
•	,	-

Physics	. General subject	127
Psychology	. General subject	129
Religion & Ethics	Applied subject	131
Social & Community Studies	. Applied subject	133
Specialist Mathematics	General subject	135
Study of Religion	. General subject	137
Tourism	Applied subject	139
Visual Art	General subject	141
Visual Arts in Practice	. Applied subject	143
Appendix A Study at TAFE Options		145
Appendix B School Based Apprenticeships and Traineesh	nips	148
Appendix C Australian Qualifications Framework		150

#### **CLAIRVAUX MACKILLOP COLLEGE**

#### **Principal's Message**

Senior Schooling is both an exciting and challenging period for our learners. It is a time when our young people are required participate actively in learning processes and diligently apply themselves to their home study and assessment work. It is a time when they need to pursue excellence, to perform their best. They are required to self-direct, to plan appropriately and to access the very rich resources available to them within this College.

Our learners do this with the great support of their teachers, Curriculum Leaders, Program Leaders and Pastoral Leaders. They need to be organised and to seek assistance when they become stuck. They need to plan their down time as much as their study time and balance other distractions like technology, social media and part time work. They need to remain connected and engaged in the full life of the college.

We aim that each of our young people are able to take their next step at the completion of Year 12, whatever that may be; further study, a trade or work. The Senior Education and Training (SET) Plan process is one that aims to ensure that our learners are in the most appropriate pathway to enable a successful post school transition. Clairvaux MacKillop College is well known for its excellent learning and teaching, supported by clear policies, processes and procedures for our students.

Senior Schooling can be complex. We hope to clarify this complexity for you as your young person makes these very important decisions. It is lovely to be able to walk with you during these processes as we move into these final two years of schooling.

Wayne Chapman **Principal** 

#### **School Mission**

Our Mission is to work actively as a Catholic, Christian, inclusive learning community.

#### **History and Context**

Clairvaux MacKillop College is a co-educational Catholic Secondary College that seeks to develop a unique identity of faith, hope and love, based on the vision and person of Jesus Christ.

For over 30 years, we have built a community of students and staff working together towards common goals, striving to be welcoming, open and supportive of each other.

Over the years we have built a reputation for academic excellence, of students with a balanced outlook on life who have developed self-discipline, self-motivation, responsibility and accountability.

Our vision is to continue that work. We encourage our students to be welcoming, open and supportive. We encourage them to interact with their world with justice, respect and compassion, forgiveness and patience. These characteristics attitudes and life skills will assist them to contribute positively and openly to their community.

#### **School Vision**

Inspired by our Catholic tradition, we strive for excellence imbued by the charisms of our Founders. As witnesses to the Good News of Jesus Christ, we act with integrity and hope. Empowered by the Spirit, we embrace the future with confidence.

#### **School Values**

**Excellence** - Accepting responsibility for quality Learning and Teaching is a shared expectation.

Integrity - As witnesses to the Good News of Jesus Christ, we act ethically.

**Justice** – As people of faith, foster respectful relationships, as well as respect for the environment.

Commitment - As a community we nurture the gifts and talents of all for the common good.

**Compassion** - Advocating for and empathising in solidarity with those at the margins.

**Celebration** - As a community, honour the successes and achievements within the framework of a holistic education.

# **VISION FOR LEARNING**

Clairvaux Mackillop College is a community of transformation in the SPIRIT OF THE RISEN CHRIST. We are inspired by the visionary values of Mary Mackillop and Edmund Rice. We challenge each student to achieve their personal best in an environment which values the RESPECT AND DIGNITY of each person. We strive to develop VISIONARY YOUNG PEOPLE who embrace their changing world with confidence and hope.

# **N THE SPIRIT OF CHRIS**

 Integrating faith, life and culture • Living Gospel values Committed to the dignity of the human person Sharing a strong Catholic Identity and mission A commitment to: Social Justice

BY EFFORT AND FAILY

# **NCLUSIVE COMMUNITY** CONNECTED A community founded on:

vision • Owning the collective responsibility for the success of Honouring families as the first educators • United by a shared each person • Knowing that everyone is capable of learning • learning • Valuing the differences and infinite possibilities in Inspiring strong relationships
 Stimulating lifelong students.

7

# VISIONARY YOUNG PEOPLE

 Hope-filled young people who enrich the world around them. Creative and curious • Resilient risk takers • Seekers and creators of new knowledge and ideas Learners who are:

# **EMBRACE OUR CHANGING** WORLD

 Innovation • Contemporary pedagogies • Learning together and from A learning culture built upon:

each other • A spirit of continual learning and adaptability in using digital technology to extend learning.

# Nurturing a caring, compassionate, inclusive and connected **RELATIONSHIPS AND** CONNECTEDNESS

community.

FAITH

Celebrating a hope-filled Catholic faith which grows from reflection and leads to justice and service

Encouraging each person to commit to realising their potential

and use the gifts given to them from God. ENGAGEMENT

**COMMITMENT AND** 

# ENGAGED

participants in their own learning and staff collaborate to their students and how they learn • Flexible learning spaces are used intentionally • Learning environments are safe and supportive • A wide instructional range both activates and facilitates learning • Students are active design deep learning experiences that reflect the needs and interests of students • Learners seek local and global Pedagogical design is innovative and enhances learning A culture of understanding is evidenced by teachers who know connections.

# CHALLENGED

and enrich our world • Students are inspired and challenged to make connections in their learning, both independently and as experiences • Growth mindset, reflective practices and high create opportunities for collaboration, communication, critical agency empowers young people as active citizens who shape members of teams • Learning experiences are differentiated • In continuously critiquing, questioning and reimagining one's self and the world, there is ongoing engagement with Catholic beliefs earners thrive in a culture where there are rigorous learning. standards drive the curriculum • Contemporary pedagogies chinking, the development of character and creativity • Student

# and practices.

Me String out potential

PROGRESSING

The learning community works together to improve student achievement

progression • Assessment design is intentional • Learning progresses through feedback Learners are met at point of need, supported and inspired. Progress is recognised and celebrated.

 Strong partnerships are visible and are built on conversation and feedback drives challenging and achievable goals • Data analysis informs and enables individual

#### Introduction

The Year 11 to 12 Curriculum Handbook is a guide to planning the Senior Years education pathway. It will provide students with information regarding the next phase of Secondary schooling, including subject selection, qualifications and tertiary entrance.

Contained in this guide are outlines of all units of study offered at Clairvaux MacKillop College for students undertaking Year 11 and 12 in 2026/2027. Please note that subjects are offered where sufficient student numbers exist for a class.

Year 10 is the start of the Senior years phase of learning. In Year 10, students make important decisions about their Senior Secondary schooling and education, training and career goals. The College works with students and their parents/carers to develop a Senior Education and Training (SET) Plan. This process can support students to reflect on and make important decisions about:

- structuring their learning in Years 11 and 12 around their abilities, interests and ambitions
- mapping their pathway to a QCE or, if eligible, a QCIA.

Year 10 is the final year of the Australian Curriculum, which forms the foundation knowledge and skills required for senior schooling. Schools design and deliver their Year 10 program to ensure students:

- complete the P-10 Australian Curriculum recommended knowledge and skills
- receive the necessary advice, guidance and preparation to start senior studies

Schools may support students' preparation for senior studies by:

- identifying opportunities within the Year 10 Australian Curriculum to introduce concepts and skills that provide a foundation for the corresponding senior syllabus (for Years 11 and 12)
- selecting and modifying the assessment techniques and conditions from the senior syllabus to gather evidence of student learning in the corresponding Year 10 Australian Curriculum achievement standard and standards elaborations

- building understanding and skills necessary for success in the senior syllabus by identifying the underpinning factors and their alignment to the corresponding General Capabilities in the Year 10 Australian Curriculum
- addressing students' individual needs through differentiation.

Schools also open online learning accounts for students. For more information about senior pathway planning, see: www.qcaa.qld.edu.au/senior/certificates-and-qualifications/qce.

#### **Senior Curriculum**

Students currently in Year 10 are about to embark on the final two years of their Secondary Education journey. It marks the end of the compulsory phase of learning and the start of the earning or learning compulsory participation phase. It will require students to make decisions about possible pathways for their future and select appropriate subjects and/or courses to ensure success in their chosen pathway.

Students are already aware that the Senior phase of learning is demanding and challenging. As students move into Year 11, we encourage them to thrive on

the responsibilities and commitments that they will face and to undertake their studies knowing that their chosen pathways will provide a springboard into their future living, learning and employment.

The Senior Curriculum involves two courses:

- Queensland Certificate of Education (QCE) most students study this course.
- Queensland Certificate of Individual Achievement (QCIA) eligible students are offered this course.

#### **Curriculum Structure**

At Clairvaux MacKillop College, students in Year 11 and 12 must select a subject in the three core areas listed below:

Study of Religion	English	General Mathematics
Religion and Ethics	Literature	Mathematical Methods
	Essential English	Specialist Mathematics
		Essential Mathematics

Students will also study an additional three subjects from the wide variety offered both here at the College and with our learning partners.

#### **Attendance Requirements**

All areas of study are subject to attendance requirements. Each subject has nominal hours per study area that must be completed in order to satisfactorily complete the area of study. The expected attendance standards are, at any given point in time, a minimum of 90% attendance (as an example, over a ten-week term, one day absent is calculated at 2% at the end of term). For a student, attendance at extra-curricular activities, sporting events, excursion and incursion opportunities, camps, senior formals, social events etc. may be impacted and restricted due to low attendance rates and / or lack of assessment submission and homework completion.

#### Absence from School during the School Terms

Students are discouraged from taking un-necessary time away from learning and assessment. Learning and Assessment cannot be paused during any time away. Applications for a leave of absence can be obtained through the College Office. Students who take time off school for holidays <u>cannot be granted</u> <u>Short Term AARA, or complete examinations before they leave on vacation</u>.

#### Structure of Learning in Year 11 and 12

In Year 11, both the QCE and the QCIA is not really structured around school terms – and this is a major departure from what has happened in Years 7-10.

Below is a general representation of Units 1-4 learning for Year 11, 2026 students. Exact start and finish times for learning within Units 1-2 and within Units 3-4 may differ according to the recommended hours of learning for unit topics.

Generally, Unit 1 takes place from January to May. Unit 2 takes place from May to September. All Year 11, 2026 students will commence Unit 3 at the beginning of Term 4, Year 11.

Year 11 - 2026					
	Formative A	Assessment		Summa	tive Assessment
Unit One Unit Two		Unit T	hree / Four pair		
Term 1	Ter	Term 2 Term 3			Term 4
Year 12 - 2027					
Summative Assessment					
Unit Three / Four pair External Exams					
Term 1	Ter	m 2	Term 3		Term 4

In the QCE system, Units 3-4 are summative and contribute to subject exit levels of achievement and the calculation of ATAR scores for eligible students. For teachers to deliver the QCAA recommended learning hours before the date of external exams, students will commence <u>Unit 3 learning in Term 4, Year 11</u>.

In most subjects, Year 11 students will undertake summative assessment for Unit 3 learning in Term 4, Year 11 and these results will count towards their final exit subject achievement and ATAR calculation if applicable.

#### Subject Changes

Because of the rules around the QCE, students must complete the learning and all assessment for the entire unit. Therefore, subject changes can only take place at the end of Unit 1 and Unit 2. Because Unit 3 and 4 must be completed as a pair, the final subject changes that can be made, occur at the end of Unit 2.

The College will provide advice around subject changes as there are restrictions within the QCE rules for completion of the Core. The timing for subject changes and the procedure to be followed will be communicated clearly.

#### School-Based Apprenticeships, Traineeships and External Courses

The College values school-based apprenticeships, traineeships and Vocational Learning as providing a valuable pathway for the future of our students. Such opportunities allow students to gain:

- Acquisition of valuable skills (trade or vocational) at work and under the guidance of a training organisation.
- Opportunity to complete a nationally recognised qualification.
- Valuable learning progression towards a Queensland Certificate of Education.

In addition, with approval, students may complete external learning opportunities or have individual learning needs or personal circumstances which may be complicated by school learning requirements.

In Year 11 and 12, all students complete six subjects (which must include a Religion, English and Mathematics subject). Students who wish to complete a TAFE-at-School course or Apprenticeship / Traineeship may be considered to use that as their sixth subject – dependant on approval. Applications to complete five subjects (or fewer) will only be permitted in **exceptional circumstances**. These circumstances must be documented and must be discussed with the Assistant Principal – Teaching and Learning (Senior).

School-based apprenticeships, traineeships, external courses and work are generally not a reason that will permit a student to study five subjects.

In Year 12, all students will study six subjects (which must include a Religion, English and Mathematics subject).

There may be **exceptional circumstances** necessitating students to discontinue studying an elective subject. Such circumstances must be documented and will need to be discussed with the Assistant Principal – Teaching and Learning (Senior). Such circumstances will consider:

- Progression towards the Queensland Certificate of Education.
- Individual learning needs.
- Demonstrated willingness to work independently.
- Wellbeing and medical needs.
- Timetable requirements.
- The nature of the apprenticeship, traineeship or external learning.
- Other personal reasons.

Please be aware that Unit 3 and 4 Subjects must be studied as a pair.

It is preferable that such applications must be made before Internal Assessment 1 has been submitted by a student. Applications must be made before the due date for change of subjects and timetables have been published.

#### **Course 1: Queensland Certificate of Education (QCE)**

The Queensland Certificate of Education (QCE) is Queensland's Senior School qualification, which is

awarded to eligible students, usually at the end of Year 12. The QCE recognises broad learning options and offers flexibility in what, where and when learning occurs. It is internationally recognised and provides evidence of Senior Schooling achievements.

Clairvaux MacKillop College expects all QCE students completing Year 12 to attain the qualification as a minimum qualification standard. The **Queensland Certificate of Education (QCE)** qualification will be awarded to eligible students by the Queensland Curriculum and Assessment Authority (QCAA).

Queensland Certificate of Education Marine III Jace Clizes Marine III Sectors Marine III

Students completing Year 12 in Queensland will be issued with a Senior Education Profile. Included in this profile could be the student's

**Statement of Results** which is a transcript of a student's learning account. The Statement of Results shows all QCE-contributing studies and the results achieved that may contribute to the award of a QCE, as well as a **Queensland Certificate of Education (QCE).** 

#### About the QCE

The flexibility of the QCE means that students can choose from a wide range of learning options to suit their interests and career goals. To receive a QCE, students must achieve the set amount of learning, at the set standard, in a set pattern, while meeting literacy and numeracy requirements. The QCE is issued to eligible students when they meet all the requirements, either at the completion of Year 12, or after they have left school.

#### **QCE: Requirements**

Set pattern Within the set pattern requirement, there are three categories of learning — Core, Preparatory and Complementary. When the set standard is met, credit will accrue in a student's learning account.

To meet the set pattern requirement for a QCE, at least 12 credits must be accrued from completed Core courses of study. The remaining 8 credits may accrue from a combination of Core, Preparatory or Complementary courses of study.

#### Core: At least 12 credits must come from completed Core courses of study

COURSE	QCE CREDITS PER COURSE
QCAA General subjects and Applied subjects	up to 4
QCAA General Extension subjects	up to 2
QCAA General Senior External Examination subjects	4
Certificate II qualifications	up to 4
Certificate III and IV qualifications (includes traineeships)	up to 8
School-based apprenticeships	up to 6
Recognised studies categorised as Core	as recognised by QCAA

#### • Preparatory: A maximum of 4 credits can come from Preparatory courses of study

QCAA Short Courses	4
QCAA Short Course in Literacy     QCAA Short Course in Numeracy	1
Certificate I qualifications	up to 3
Recognised studies categorised as Preparatory	as recognised by QCAA

#### Complementary: A maximum of 8 credits can come from Complementary courses of study

<ul> <li>QCAA Short Courses</li> <li>QCAA Short Course in Aboriginal &amp; Torres Strait Islander Languages</li> <li>QCAA Short Course in Career Education</li> </ul>	1
University subjects (while a student is enrolled at a school)	up to 4
Diplomas and Advanced Diplomas (while a student is enrolled at a school)	up to 8
Recognised studies categorised as Complementary	as recognised by QCAA

#### **QCE: Completed Core Requirement**

Within the QCE set pattern requirement, students must accrue 12 credits from completed Core courses. Students must complete a Core course of study from beginning to end to contribute to the 12 credits.

Students must complete all four units of study for QCAA General or Applied subjects or all components to certificates II, III or IV for credit for the completed Core credit requirement.

In a General or Applied subject, Core credits can only contribute to the completed Core requirement if a student completes Units 1, 2, 3 and 4 and achieves a grade of C or better in the Unit 3 and 4 pair. Credit will accrue for units where the set standard is met. For example, Essential English (Core course of study) completed for all four units may contribute two, three or four QCE credits to the completed Core requirement.

In VET qualifications, credits contribute to the completed Core requirement when a student completes a Certificate II, III or IV within other VET QCE requirements. The amount of credit for each completed certificate may vary depending on the notionally agreed nominal hours of learning required (as determined by the Department of Employment, Small Business and Training).

#### **QCE Credit for Core Courses: General / Applied Subjects**

Schools and other learning providers report students' results at intervals set by the QCAA. General and Applied subject results are reported after students complete Unit 1, Unit 2, and the Unit 3 and 4 pair. QCE credit progressively accrues in students' learning accounts.

Credit from General and Applied courses of study will accrue when the set standard is met and reported. Results reported as satisfactory for Unit 1 or Unit 2 will accrue one credit each to a QCE. A grade of C or better in a Unit 3 and 4 pair will accrue two credits to a QCE. Extension subjects will accrue credit in the Core category of learning. Two credits will accrue to a QCE when the set standard of a grade of C or better is achieved in the Unit 3 and 4 pair.

General and Applied subjects Set standard		QCE credits
Unit 1	Satisfactory	1
Unit 2	Satisfactory	1
Units 3 and 4 Grade of C or be		2
Maximum credit available		4
Extension subjects	Set standard	QCE credits
Units 3 and 4	Grade of C or better	2
Maximum credit available		2

VET courses of study will accrue credit as results are reported, provided they meet all other QCE requirements. Certificates in the Core category of learning (II, III, IV) will accrue QCE credit at increments of 25%, 50%, 75% and completion. Certificate I qualifications are in the Preparatory category of learning and accrue credit on completion. VET courses of study in the Complementary category of learning (Diploma and Advanced Diploma qualifications) will accrue one QCE credit for each unit of competency reported as competent, up to eight credits (within VET credit rules).

Non-Queensland studies and recognised studies that are in the Core category of learning will accrue credit as determined by the QCAA.

#### \*\*VET courses, as well as apprenticeships, are not available to overseas students.

#### **Relaxation of Completed Core Credit**

Relaxation of the completed Core requirement will be automatically applied for students who change from a QCAA Mathematics subject to another QCAA Mathematics subject, as well as students who change from a QCAA English subject to another QCAA English subject. Credits accrue for units that meet the set standard.

Students who transfer schools during senior secondary schooling (including transferring from interstate or overseas as well as intrastate) and are unable to continue the same course of study may apply to have the requirements for completed Core relaxed.

#### **QCE Literacy and Numeracy Requirement**

The QCE literacy and numeracy requirements meet standards outlined in the Australian Core Skills Framework (ACSF) Level 3. This national framework describes the five core skills of learning, reading, writing, oral communication and numeracy. The framework is used to describe core skills relevant to the workplace and employment, and tailor approaches to teaching and learning.

The literacy and numeracy requirements can be met through a range of options, as outlined at the following link. Students at Clairvaux MacKillop College will be set up to meet the literacy and numeracy requirements through successfully studying our English and Mathematics subjects:

- Essential English (applied)
   Essential Mathematics (applied)
  - General Mathematics (general)
- Literature (general)

English (general)

- Mathematical Methods (general)
- Specialist Mathematics (general)

Students' progress towards their QCE will be monitored continuously throughout the Year 11 and 12 journey. Academic interventions will occur to manage students' successful completion of their QCE. Alternate options or pathways will be investigated in certain circumstances.

In the case where students have not met the literacy and numeracy requirements, they will be guided towards enrolment in Unit 1 Essential Maths or Essential English on the SECA days.

#### **Queensland ATAR**

The ATAR is the primary mechanism used nationally for tertiary admissions and indicates a student's position relative to other students. QTAC will calculate ATARs for Queensland school leavers.

#### What is the ATAR?

The ATAR is the standard measure of overall school achievement used Australian wide. It is a rank indicating a student's position overall relative to other students. The ATAR is expressed on a 2000-point scale from 99.95 (highest) down to 0, in increments of 0.05. ATARs below 30 will be reported as '30.00 or less'.

#### ATAR eligibility

To be eligible for an ATAR, a student must have:

- satisfactorily completed an English subject
- completed five general subjects, or four general subjects plus one applied subject or VET course at AQF certificate III or above
- accumulated their subject results within a five-year period.

While students must satisfactorily complete an English subject to be eligible for an ATAR, the result in English will only be included in the ATAR calculation if it is one of the student's best five subjects.

#### ATAR Calculation

The ATAR will be calculated by combining a student's best five subject scaled scores. Scaled scores will be derived from a student's subject results as reported to QTAC by the Queensland Curriculum and Assessment Authority (QCAA), using a process of inter-subject scaling.

Please note: While students may study both Applied (Essential) and General subjects from the same learning area, only one may contribute to ATAR calculations. E.g. If a student studies Visual Art in Practice (Applied) and Visual Art (General) only one may contribute to ATAR calculations.

#### Inter-Subject Scaling

Inter-subject scaling is where raw scores for a given subject are adjusted so the results for that subject can be compared fairly with the results of any other subject. If a student of a given ability studies an easier Maths subject, they might achieve 90/100. But if the same student studied a more difficult Maths subject, they might achieve 70/100. However, if scaling works, they should end up with the same scaled score for inclusion in their ATAR calculation. If subjects were not scaled, students could maximise their ATAR by studying what they believe are easier subjects to obtain the best five subject results to comprise their ATAR. Inter-subject scaling will not enhance or diminish a student's performance in their subjects. A student's ranking relative to other students in their subjects does not change. Scaling simply allows for performances to be compared across all subjects, and then only to include these in the calculation of a student's ATAR. Students should choose subjects that:

- they enjoy and they will achieve good results
- that they need for tertiary study and work pathways

#### Vocational Education and Training (VET) and the ATAR

Each VET qualification level (Certificate III or higher) will have a single scaled score that can be included in a student's ATAR. For example, a Certificate III in Hospitality and a Certificate III in Laboratory Skills will each have the same scaled score; this will be regardless of the duration or area of study of the certificate III. It is expected that the scaled score for a completed VET Diploma will be higher than that for a completed VET Certificate IV, which in turn will be higher than the scaled score for a completed Score for a completed VET Certificate III.

#### \*\*VET courses, as well as apprenticeships, are not available to overseas students.

#### **Tertiary Entrance**

The preferred mechanism for Tertiary entrance in Queensland in the ATAR.

However, some universities in Queensland (but not all) will use a Selection Rank.

A selection rank is a numerical value used by tertiary institutions to assess an applicant's suitability for a specific course. It is derived from various criteria, including academic achievements and other factors like adjustments for certain circumstances. The Australian Tertiary Admission Rank (ATAR) is often mistaken for the selection rank, but they are distinct.

Vocational Education and Training (VET) qualifications can also play a role in determining an applicant's Selection Rank. While not all institutions consider VET qualifications, many do assess them at the Certificate III level and higher. These qualifications are evaluated as stand-alone achievements and assigned a Selection Rank according to a specific schedule.

#### **Queensland Tertiary Admissions Centre (QTAC)**

Most school leavers wishing to enter further study apply for university or TAFE entrance through QTAC. Most students receive an offer through QTAC. Applications are made online, and generally open in early August. Several courses also have additional entry requirements, such as sitting the UMAT (Medicine), an audition (Performing Arts) or submitting a portfolio (Visual or Fine Arts). Further information about entrance requirements and course prerequisites can be found on the QTAC website.

The School will run a QTAC presentation night midway through the year to provide up to date information for Year 12 students (if permitted).

	<b>Reco</b> 1.	mmendations Students who wish to study 6 General subjects should have demonstrated an average of B standard and above (B to A) across their Semester 1, Year 10 subjects. e.g. B, B, A, B, A, A
	2.	Students who demonstrate an average of between a C standard and a B standard (C to B) across their Year 10 subjects are advised not to select 6 General subjects in Year 11. Depending on their Yr 10 subject result average, students in this category should select 4 or 5 General subjects with the addition of Applied and/or VET subjects.
	3.	Students who have demonstrated below an average of C standard (C to D) across their Semester 1, Year 10 subjects should not take an ATAR pathway. Students in this category are advised to take a Vocational 6 or 5 pathway to ensure success in their senior years. Students may work with the Academic Pathways Leader to explore alternative pathways to university or other tertiary studies in these cases.
	Requ	irements
	1.	<ul> <li>Must select 6 subjects. Either</li> <li>6 General subjects</li> <li>5 General subjects, 1 Applied subject or 1 VET subject</li> <li>4 General subjects and a combination of Applied and VET subjects</li> </ul>
	St	udents on this pathway may not undertake an Apprenticeship/Traineeship or TAFE at School.
Eligibility &	2.	A minimum of 3 core subjects must be completed from Unit 1 to Unit 4 with the unit 3-4 at a sound achievement. VET subjects also count as core subjects.
conditions	3.	Must select a Mathematics, Religion and General English subject. May select both General English and Literature.
	4.	May select Essential Mathematics but not together with General Mathematics, Mathematical Methods, or Specialist Mathematics. Must check tertiary prerequisites.
	5.	An ATAR is a student's position in a state-wide ranking system that places Year 12 students in order of merit for the purposes of tertiary entrance only.
	6.	Must pass General English or Literature at sound achievement to be awarded an ATAR. English subject results may or may not be included in the calculation of a student's ATAR.
	7.	An ATAR is awarded on the basis on assessment results from a student's best 5 General subjects in Units 3 & 4, or in a combination of four General subject results plus an Applied subject result/Certificate III, IV or Diploma qualification.
	8.	Students in this pathway cannot undertake external work or study during regular school hours without approval from the Assistant Principal – Learning and Teaching (Senior).
	9.	Students wishing to study Music Extension in Year 11, Term 4 (Units 3-4), must select 11 Music and 11 Music in Practice, or select 11 Music and exit an elective subject from Unit 3 onwards.
	10.	Elective subject choices are listed in strict order of preference.
Subject selection		Must have achieved minimum C standard for Year 10 English. Must have met minimum result for Year 10 Semester One for General subjects.

#### Vocational Pathway 1 (6 subjects)

#### No ATAR

**Combination of Applied, VET and General Subjects** 

Suitability	For students who wish to enter the workforce or post-secondary training eg TAFE, apprenticeships etc.
Eligibility & conditions	<ol> <li>Must select 6 subjects</li> <li>A minimum of 3 core subjects must be completed from Unit 1 to Unit 4 with the unit 3-4 at a sound achievement. VET subjects also count as core subjects.</li> <li>May select up to 3 General subjects if Year 10 expected minimum results have been met.</li> <li>Must select a Mathematics, Religion and General English subject</li> <li>May select Essential Mathematics but not together with Mathematical Methods, General Mathematics or Specialist Mathematics.</li> <li>May select Essential English but not together with General English or Literature</li> <li>May select a Certificate course.</li> <li>Elective subject choices are listed in strict order of preference.</li> </ol>
Subject selection	Must have met minimum expected results for Year 10 Semester One for General subjects.

\*\*VET courses, as well as apprenticeships, are not available to overseas students.

#### Vocational Pathway 2 (6 subjects)

#### No ATAR

#### Combination of school based subjects and TAFE/Apprenticeship/Traineeships

Suitability	For students who wish to enter the workforce or post-secondary training.
Eligibility & conditions	<ol> <li>Must have approval from the Program Leader – Pathways</li> <li>Must have TAFE/traineeship/apprenticeship organised prior end of Year 10</li> <li>Must select 6 subjects (TAFE at School is not included in this six).</li> <li>May select up to 2 General subjects if Year 10 expected minimum results have been met.</li> <li>Must select an English, Mathematics and Religion subject</li> <li>A minimum of 3 core subjects must be completed from Unit 1 to Unit 4 with the Unit 3-4 at a sound achievement. VET subjects also count as core subjects.</li> <li>Must maintain enrolment with external learning provider</li> <li>Elective subject choices are listed in strict order of preference.</li> </ol>
Subject selection	Must have met minimum results for Year 10 Semester One for General subjects.

#### Diploma and Advanced Diploma Qualifications and QCE Credit

Diploma and Advanced Diploma qualifications represent learning that complements core learning undertaken during senior secondary schooling and may provide valuable pathway options for many students. Credit to the QCE for a Diploma or Advanced Diploma may be accrued in the Complementary category of learning.

Where a student is eligible, they accrue credit for Diploma and Advanced Diploma qualifications. Some examples are provided below. Refer to the <u>QCE and QCIA policy and procedures handbook</u> for more information.

Examples of QCE Credit Contribution in the Complementary Category of Learning

Example student	Training package	Qualification enrolled	Competencies completed	Category of learning	QCE credit
Student 1	One qualification from training package	Diploma of Business	100%	Complementary	8
Student 2	Two qualifications	Certificate II in Business	100%	Core (completed Core)	4
	from the same training package	Diploma of Business	100%	Complementary	4
Student 3	Two qualifications from the same	Certificate III in Business	100%	Core (completed Core)	8
	training package	Diploma of Business	100%	Complementary	0
Student 4	Two qualifications from the same	Certificate III in Business	75%	Core	6
	training package	Diploma of Business	100%	Complementary	2
Student 5	Two qualifications from different	Certificate III in Fitness	100%	Core (completed Core)	8
	training packages	Diploma of Business	100%	Complementary	8

#### **VET and Tertiary Entrance**

#### \*\*VET courses, as well as apprenticeships, are not available to overseas students.

Some universities use selections ranks gained from AQF certificate III, IV or higher as well as the ATAR for ranking admissions. This is a constantly changing area and institutions apply criteria and selection ranks for entry into teritiary course.

**QTAC and university contacts and facts** 

#### **Additional Learning Options**

The flexibility of the Queensland Certificate of Education allows students to embrace a number of different pathways to education and training while still attending school. For example, students can:

- undertake a school-based traineeship or apprenticeship.
- undertake a Certificate or Diploma level course offered at school as previously mentioned.
- attend TAFE to begin or complete a Certificate I IV or Diploma course as previously mentioned.
- enroll in one or two subjects at University.
- Industry Placement students who study one or less General are required to undertake work experience.

#### School-based Certificate and Diploma Courses

Certificate II, IIII, IV and Diploma courses are offered directly through our faculties here are school as a part of the regular learning program. The benefits of selecting a certificate course offered through the school include:

- Students can access a practical course that relates directly to their future career.
- Students can gain valuable points towards their Queensland Certificate of Education.
- Students can improve their chances of tertiary study.
- Students will not be required to travel off-site to complete the qualification, as courses are undertaken at school as a part of the regular learning program.

#### VETiS Funding by the VET Investment Budget

VETiS qualifications funded by the VET Investment Budget are listed on the Queensland Training Subsidies List. These qualifications are delivered by RTOs who have been approved by the department as pre-qualified suppliers (PQS) under the Certificate 3 Guarantee. Schools, in consultation with students and their parents, can choose any PQS approved to deliver the eligible qualification.

VETiS funding is only available for one eligible Certificate I or II course. If a second Certificate VETiS-funded course is studied, additional costs will be involved.

#### Vocational Education and Training (VET) Through TAFE

If the certificate courses we offer through the school do not fit with your future plans, you can also undertake a Certificate qualification through a TAFE course or other provider. Vocational Education offers students the opportunity to complete full qualifications alongside their secondary schooling and is a great study option for students seeking work, TAFE or university entrance beyond Year 12.

For further information on available Vocational Education qualifications, please see Mr Darren Smith in the Pathways Office, in the Science Building or email smid@cvxmck.edu.au

#### **Applied Subjects and VET Qualifications**

Applied subjects and Certificate II level VET qualifications that have similar subject matter and learning goals (as determined by the QCAA) are considered duplication of learning as on the QCAA website.

QCAA - Duplication of learning

#### **VET Qualifications**

To ensure the requirements for the amount and breadth of learning for a QCE are met, limitations are placed on the amount of QCE credit that can contribute to the QCE for some VET qualifications.

Credit for the QCE is accrued when a student completes new learning. When students complete multiple VET qualifications, an RTO may transfer credit from completed units of competencies from one qualification toward completion of another qualification. New learning in VET is identified as units of competency that are recorded as competent, rather than credit transfer. Credit transfer relates to learning in VET qualifications, which is different from credit contributing to a QCE.

### QCE Credit and Qualifications from the same VET Training Package

When a student completes or partially completes multiple qualifications from the same VET training package, the highest level qualification in the Core category of learning will contribute credit to a QCE. A student who completes only a Certificate I from a training package accrues credit in the Preparatory category of learning. A student who completes a Diploma or Advanced Diploma accrues credit in the Complementary category of learning.

To ensure the breadth of learning, a maximum of eight credits from the same training package can contribute to a QCE.

All completed qualifications are recorded on the statement of results.

\*\*VET courses, as well as apprenticeships, are not available to overseas students.

#### **Expected Minimum Results**

Clairvaux MacKillop College applies expected minimum results to Senior subjects to ensure students select courses in which they have the best chance of success. These minimum results are based upon the Achievement Standard for the Australian Curriculum. *Students need to demonstrate at least a C standard in English to have the best chance of success in any General subject in Year 11.* 

Year 11 Subject	Department	Expected Minimum Result	Subject Type
Accounting	Humanities	✓ C in Year 10 English	General
Ancient History	Humanities	✓ C in Year 10 English	General
Biology	Science	<ul> <li>C in Year 10 English</li> <li>B in Year 10 Science</li> <li>B in Year 10 Maths</li> </ul>	General
Building and Construction Skills	ITD	✓ No recommendation	Applied
Business	Humanities	✓ C in Year 10 English	General
Business Studies	Humanities	✓ C in Year 10 English	Applied
Certificate II in Workplace Skills and Certificate III Business	Humanities	✓ C in Year 10 English	VET
Certificate IV in Justice	Humanities	✓ C in Year 10 English	VET
Certificate III in Fitness *	HPE	✓ C in Year 10 English	VET
Certificate III in Health Services Assistance including Certificate II in Health Support Services *	HPE	✓ C in Year 10 English	VET
Certificate II in Hospitality/Certificate III in Hospitality	Home Economics	✓ C in Year 10 English	VET
Certificate II in Sports Coaching/ Certificate III in Sports Coaching	HPE	✓ C in Year 10 English	VET
Chemistry	Science	<ul> <li>C in Year 10 English</li> <li>B in Year 10 Science</li> <li>B in Year 10 Maths and above satisfactory achievement in Algebra and Geometry assessment</li> </ul>	General
Chinese	Languages	<ul> <li>C in Year 10 Chinese</li> <li>C in Year 10 English</li> </ul>	General
Dance	The Arts	✓ C in Year 10 English	General
Design	ITD	✓ C in Year 10 English	General

Tourism	Humanities	✓ No recommendation	Applied
Visual Art	The Arts	<ul> <li>✓ C in Year 10 English</li> <li>✓ C in Year 10 Visual Art</li> </ul>	General
Visual Art in Practice	The Arts	✓ No recommendation	Applied

**N.B.:** \* These courses are VETiS-funded. Students are eligible for VETiS funding for one Certificate course only. If undertaking additional VETiS-funded courses, the listed course costs will be incurred. \*\* Students who study Specialist Mathematics must also study Mathematical Methods This information was correct at the time of printing however requirements and class availability are subject to change over the period this document is intended to cover due to responses to Australian Curriculum, QCE and ATAR updates, teacher availability and student interest.

\*\*VET courses, as well as apprenticeships, are not available to overseas students.

#### **Subject Selection Guide by Themes**

Use the following table to help understand the connection between post-secondary careers and school-based subjects. Students who are considering specific post-school pathways should use this table to guide their subject selection in Years 11-12.

The Arts	Design/Manufacturing/ Technology	Sciences/Engineering/ Information Technology	Humanities and Social Sciences	Health and Recreation	Business/ Law
Music in Practice	Building and Construction Skills	Biology	Ancient History	Cert III in Fitness (incorporating Cert II in Sport and Recreation)	Accounting
Dance	Design	Chemistry	Chinese	Food and Nutrition	Cert III in Business
Drama	Industrial Graphics Skills	Digital Solutions	Geography	Cert III in Health Services Assistance incorporating Cert II in Health Support Services	Diploma of Business
Drama in Practice	Furnishing Skills		Japanese	Physical Education	Cert IV in Crime and Justice
Film, TV and New Media	Information Communication and Technology	Physics	Modern History	Health	Economics
Music		Specialist Mathematics	Philosophy and Reason	Cert III Hospitality	Legal Studies
Music Extension (Yr 12)		Engineering	Literature		Tourism
Visual Arts in Practice		Psychology	Social and Community Studies		Business
Visual Art		Maths Methods			Business Studies
		Information Communication and Technology			
Certificate III, IV or Diploma via TAFE or SDE/Traineeship or Apprenticeship (off campus)					
English/Literature/Essential English General Mathematics/Mathematics Methods/Essential Mathematics Study of Religion/Religion and Ethics					

#### **Making Career Decisions**

#### Step 1 Understand the basic concepts

- Career decision making is not magic.
- No one else can make the decision for you.
- You must be actively involved in the process.
- It is never too late to start.
- There is not one 'ideal' occupation for you. There may be several occupations that will give you the satisfaction you want from work.
- In all likelihood you will have several occupations during your working lifetime. The career decision you are making now is not necessarily a lifetime decision.

#### Step 2 Look inwards – develop a profile of yourself

#### What do you want from a job? Think about it. Do you want to:

- Work with other people or by yourself?
- Work outdoors or indoors?
- Sit at a desk or be physically active?
- Work with ideas or apply ideas (hands on) or do both?
- Help people in some way?
- Make a lot of money?
- Be always learning on the job?
- Have lots of variety and activity?
- Have a structured, predictable workday?
- Feel that the job you have is a secure job?
- Work intensely on a project and see it through to the end?
- Feel you are contributing to the community?
- Work with particular things or people e.g. engines, animals, children, or the elderly?

#### What do you do best? What are your strengths? Are they in:

- Working in a certain field of study such as humanities, mathematics, and science?
- Working with ideas, words or things?
- Working with people?
- Working with your hands?
- Working with computers or machines?

#### What other things influence your decision? Perhaps:

- The opinions of family and friends?
- The availability of employment?
- Age?
- Staying in the local area?
- A physical or medical condition?

What occupations have you already thought of? You can add to these ideas by completing a career questionnaire from one of the following websites.

<u>www.myfuture.edu.au</u> Australian Careers - <u>Career Quiz</u> http://joboutlook.gov.au/careerquiz.aspx .

#### Step 3 Look outwards – gather information

Read about the jobs in your occupational ideas list. The following resources will help you.

- myfuture <u>www.myfuture.edu.au</u>
- jobguide book all Year 10s will receive a copy
- jobguide website https://www.education.gov.au/job-guide
- Tertiary Prerequisites all Year 10s in Term 3 receive a copy

Next you need to talk to people who are already employed in the occupations on your list. Do not be afraid to do this, as most people are prepared to help you with your career research if you are polite, prepared with questions, and do not waste their time. Use your own networks (parents' friends, your friends, parents, neighbours, etc.) to contact people in jobs you are interested in. Develop questions to ask them. Some possible questions are:

- What do you do in a typical work day?
- What do you like about the job?
- What do you dislike about the job?
- What is the recommended training to prepare for the job?
- Are there alternative training pathways?
- Are there people in the same occupation who do different things from you?
- Is there someone else you think I should speak to?
- Where do you go from here in this job?

It is helpful to discuss your findings with a friend or relative who knows you well and you feel comfortable talking with. Other peoples' insights can sometimes help us clarify our thinking. Talk to people – teachers, relatives and friends. Attend University Open Days and the Tertiary Studies Expo.

#### Step 4 Prioritise the jobs

By this time you should be able to put the jobs you have selected in order of your preference.

#### Step 5 Plan a training pathway

Because of your research, you will already know the various pathways to obtaining your occupational goal. Select the pathway that best suits you. This information will now make it easier for you to start completing your Senior Education Training Plan (SET Plan).

#### Step 6 Act on your plan and seek assistance

Seek assistance from the curriculum leaders and school counsellors if you need help with this process.

#### **Essential Websites**

#### https://myfuture.edu.au/

myfuture guides you through activities to help you explore your career. You will answer questions, explore career suggestions made by myfuture, select career favourites, clarify your career direction, and then create an action plan to help you reach your career goals.

#### https://studentconnect.qcaa.qld.edu.au

A career information service provided by the QCA and provides links to other useful sites. It also allows you to plan and track your QCE.

#### www.qcaa.qld.edu.au

Provides a wide range of information such as subjects offered by the QCAA, ATAR and QCE information. It is worthwhile to look at the various areas on this site.

#### www.qtac.edu.au

Follow the links from the 'ATAR and MyPath' menu option on the left hand menu. A number of useful information on planning ahead and ATAR.

#### **Recommended Websites**

#### www.trainandemploy.qld.gov.au

Queensland's entry point to jobs, careers and training, apprenticeships and traineeships, and employment and training government assistance.

http://www.australia.gov.au/information-and-services/jobs-and-workplace/career-information

A Federal government site with a range of career options, advice and links to useful sites.

#### www.humanmetrics.com

Take the free personality type test to discover more about your personality. This type of information can be helpful in deciding what type of career or job you would be most suited to.

#### **General Syllabuses**

#### Structure

The syllabus structure consists of a course overview and assessment.

#### **General Syllabuses Course Overview**

General syllabuses are developmental four-unit courses of study.

Units 1 and 2 provide foundational learning, allowing students to experience all syllabus objectives and begin

engaging with the course subject matter. It is intended that Units 1 and 2 are studied as a pair. Assessment in Units 1 and 2 provides students with feedback on their progress in a course of study and contributes to the award of a QCE.

Students should complete Units 1 and 2 before starting Units 3 and 4.

Units 3 and 4 consolidate student learning. Assessment in Units 3 and 4 is summative and student results contribute to the award of a QCE and to ATAR calculations.

#### **Extension Syllabuses Course Overview**

Extension subjects are extensions of the related General subjects and include external assessment. Extension subjects are studied either concurrently with, or after, Units 3 and 4 of the General course of study.

Extension syllabuses are courses of study that consist of two units (Units 3 and 4). Subject matter, learning experiences and assessment increase in complexity across the two units as students develop greater independence as learners.

The results from Units 3 and 4 contribute to the award of a QCE and to ATAR calculations.

#### Assessment

#### **Units 1 and 2 Assessments**

Schools decide the sequence, scope and scale of assessments for Units 1 and 2. These assessments should reflect the local context. Teachers determine the assessment program, tasks and marking guides that are used to assess student performance for Units 1 and 2.

Units 1 and 2 assessment outcomes provide feedback to students on their progress in the course of study. Schools should develop at least *two* but no more than *four* assessments for Units 1 and 2. At least *one* assessment must be completed for *each* unit.

Schools report satisfactory completion of Units 1 and 2 to the QCAA, and may choose to report levels of achievement to students and parents/carers using grades, descriptive statements or other indicators.

#### **Units 3 and 4 Assessments**

Students complete a total of *four* summative assessments — three internal and one external — that count towards the overall subject result in each General subject.

Schools develop *three* internal assessments for each senior subject to reflect the requirements described in Units 3 and 4 of each General syllabus.

The three summative internal assessments need to be endorsed by the QCAA before they are used in schools. Students' results in these assessments are externally confirmed by QCAA assessors. These confirmed results from internal assessment are combined with a single result from an external assessment, which is developed and marked by the QCAA. The external assessment result for a subject contributes to a determined percentage of a students' overall subject result. For most subjects this is 25%; for Mathematics and Science subjects it is 50%.

#### Instrument-Specific Marking Guides

Each syllabus provides instrument-specific marking guides (ISMGs) for summative internal assessments.

The ISMGs describe the characteristics evident in student responses and align with the identified assessment objectives. Assessment objectives are drawn from the unit objectives and are contextualised for the requirements of the assessment instrument.

Schools cannot change or modify an ISMG for use with summative internal assessment.

As part of quality teaching and learning, schools should discuss ISMGs with students to help them understand the requirements of an assessment task.

#### **External Assessment**

External assessment is summative and adds valuable evidence of achievement to a student's profile. External assessment is:

- common to all schools
- administered under the same conditions at the same time and on the same day
- developed and marked by the QCAA according to a commonly applied marking scheme.

The external assessment contributes a determined percentage (see specific subject guides — assessment) to the student's overall subject result and is not privileged over summative internal assessment.

#### **Subject Adjustment Schemes**

Several Queensland universities operate Subject Adjustment Schemes to encourage students to study subjects that require a high level of skills and knowledge. Students applying through QTAC for entry into selected courses will receive bonus rank points for Sound Achievement in a range of senior subjects. Please see the QTAC reference at: https://www.qtac.edu.au/applying/application-resources/assistance-schemes

Examples of subject adjustment schemes:

#### **Griffith University**

https://www.griffith.edu.au/apply/undergraduate-study/high-school-students/year-12-subject-adjustment Clairvaux MacKillop College Subjects

Accounting, Ancient History, Biology, Business, Chemistry, Economics, Engineering, Film, Television and New Media, Geography, Chinese, Japanese, Legal Studies, Modern History, Physics, Specialist Mathematics

The following pages have yet to be updated by the relevant institution. Please review the following links at later stage or see the QTAC link above.

#### The University of Queensland

https://future-students.uq.edu.au/admissions/undergraduate/review-admission-schemes/subject-incentive-scheme

Queensland University of Technology https://www.qut.edu.au/study/applying/adjustment-schemes

#### Australian Catholic University

https://www.acu.edu.au/study-at-acu/admission-pathways/choose-your-pathway-or-entry-program/recent-secondary-education/adjustment-factors

#### **Applied Syllabuses**

Applied Syllabuses run with a similar structure to the above with a few points of difference.

• Essential Mathematics and Essential English do not have an External Assessment at the end of Unit 3 and 4, rather they have a Common Internal Assessment (CIA) at the end of Unit 3.

• The other applied subjects do not have an external or common assessment of any type.

**NOTE:** All Applied and Essential subjects can contribute to a sudent's QCE calculation. Only 1 Applied or Essential subject may factor into a student's ATAR calculation.

The Soar Program at Clairvaux MacKillop College provides high achieving Senior students to have the opportunity to extend their studies in their final years of Secondary school by participating in University programs. The Soar Program allows students to accelerate their study and their careers by engaging in exciting University units of study.

Universities offer a variety of opportunities from holiday programs to subject offerings throughout the semesters across a variety of faculties. Students who have studied university subjects in the past have found these programs to be beneficial as they allow students to learn the differences between high school and university.

Students who elect to undertake a University course may be eligible for one or more of the following:

- Credits towards certain courses
- Subject adjustments
- Additional points towards their QCE
- No course tuition fees

Please note that the school must grant approval to study a University excellence program.

Queensland University of Technology	QUT - START QUT
	Open August – Close October
	Only available from Semester 2 of Year 11.
Australian Catholic University	Uni Step-Up   ACU Equity Pathways
	See link for further details.
University of Queensland	Enhanced Studies Program - University of Queensland (uq.edu.au)
	Open July – Close August – Only available to Year 12.
University of the Sunshine Coast	Headstart   UniSC   University of the Sunshine Coast, Queensland,
	Australia (usc.edu.au)
	Open August – Close October
Griffith University	GUESTS on-campus or online (griffith.edu.au)
	Only available from Semester 2 of Year 11.
University of Southern Queensland	Head Start - University Courses For High School Students
	University of Southern Queensland (unisq.edu.au)
	Application close in February for Semester 1.
University of Central Queensland	Start Uni Now (SUN) - CQUniversity
	Applications close in February for Semester 1.
James Cook University	JCU Now - JCU Australia
	Application close in January for Semester 1.

In Year 11, Unit 1, students who have consistently achieved the grade of A across their Year 10 studies, will be invited to study a University subject (online) as one of their 6 subjects. These students must follow an ATAR Pathway for their other 5 subjects.

From Year 11, Unit 2, as well as the beginning of Unit 3, high achieving students (on an ATAR pathway) may be able to join the program. University subjects need to be completed Online.

A study space in the College Library will be available for students to undertake their courses of study. The Program Leader: Senior Schooling will provide support.

Students interested in this program should consult with the Program Leader: Senior Schooling and must complete their own research into the programs and make application to the relevant University by the due date.

Students should be aware that studying a University subject requires:

- Motivation
- Self-directed Learning
- Management of studies and assessment
- Perseverance
- An additional time requirement outside of school time to complete coursework.

Students should be aware that they will need to balance their academic studies, work commitments, social time, rest and wellbeing.

### Course 2: Queensland Certificate of Individual Achievement (QCIA)

#### Queensland Certificate of Individual Achievement

The Queensland Certificate of Individual Achievement (QCIA), for eligible students, is an official record that students have completed at least 12 years of education. It provides students with a summary of their skills and knowledge to present to employers and training providers.

Discussions about a QCIA learning pathway take place in Year 10 as part of the Senior Education and Training (SET) planning process.

Students completing the QCIA, are studying an individual learning program:

• a school-developed program of study using curriculum organisers, learning goals and learning focuses in the QCAA's Guideline for individual learning

• is developed for students who have impairments or difficulties in learning that are not primarily due to socioeconomic, cultural and/or linguistic factors

- is recorded by the school through the QCAA Portal
- does not contribute credit to the Queensland Certificate of Education (QCE) and cannot duplicate learning from any QCE contributing studies.

The College will register QCIA-eligible students with the QCAA and develop individual learning programs for them using one or more of the five curriculum organisers, learning goals and learning focuses in the Guideline for Individual Learning (GIL).

The figure below shows how the elements of the QCIA curriculum fit together.

Schools then collect evidence of students' learning and participation throughout Years 11 and 12. This information is recorded on a student's QCIA.

Curriculum Content for the QCIA Pathway:

#### Subject Selection for the QCIA Pathway:

At SET planning, students and parents are guided about making appropriate subject choices around their goals and the Curriculum Content.

Appropriate subjects for the QCIA Pathway include:

Compulsory	Other Subject Choices
Religion and Ethics	Drama in Practice
Essential English	Media Arts in Practice
Essential Maths	Music in Practice
	Visual Arts in Practice
	Tourism
	Social and Community Studies
	Information and Communication Technology
	Business Studies
	Industrial Graphics Skills
	Furnishing (Safety considerations will need to be carefully assessed.)
	Building and Construction (Safety considerations will need to be carefully assessed.)

The Literacy and Numeracy demands of Certificate Courses, mean that they are unsuitable for the QCIA pathway. Certificate courses also accrue QCE points which mean that a QCIA pathway is not an appropriate selection.

# **YEAR 11** AND **YEAR 12** SUBJECTS

# Accounting

Accounting is a universal discipline, encompassing the successful management of financial resources of the public sector, businesses, and individuals. It is foundational to all organisations across all industries and assists in discharging accountability and Accounting way financial control. is a of systematically organising, critically analysing and communicating financial data and information for decision-making. The overarching context for this syllabus is the real-world expectation that accounting involves processing transactions to develop financial statements and reports to stakeholders. Digital technologies are integral to accounting, enabling real-time access to vital financial information.

When students study this subject, they develop an understanding of the essential role accounting plays in the successful performance of any organisation. Students learn fundamental accounting concepts in order to develop an understanding of accrual accounting, accounting for GST, managerial and accounting controls, internal and external financial statements, and analysis. Students are then ready for more complex utilisation of knowledge, allowing them to synthesise data and other financial practices of financial information. evaluate management, solve authentic accounting problems and make and communicate recommendations.

Accounting is for students with a special interest in business, commerce, entrepreneurship and the personal management of financial resources. The numerical, literacy, technical, financial, critical thinking, decision-making and problem-solving skills learned in Accounting enrich the personal and working lives of students. Problem-solving and the use of authentic and diversified accounting contexts provide opportunity for students to develop an understanding of the ethical attitudes and values required to participate more effectively and responsibly in a changing business environment.

#### Pathways

A course of study in Accounting can establish a basis for further education and employment in the fields of accounting, business, management, banking, finance, law, economics and commerce.

#### **Objectives**

By the conclusion of the course of study, students will:

- comprehend accounting concepts, principles and processes
- synthesise accounting principles and processes
- analyse and interpret financial data and information
- evaluate practices of financial management to make decisions and propose recommendations
- create responses that communicate meaning.

Unit 1	Unit 2	Unit 3	Unit 4

#### Structure

#### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Project — cash management	25%	Summative internal assessment 3 (IA3): • Examination — combination response	25%
Summative internal assessment 2 (IA2): • Examination — combination response	25%	Summative external assessment (EA): • Examination — combination response	25%

# **Ancient History**

Ancient History is concerned with studying people, societies and civilisations of the Ancient World, from the development of the earliest human communities to the end of the Middle Ages. Students explore the interaction of societies and the impact of individuals and groups on ancient events and ways of life, enriching their appreciation of humanity and the relevance of the ancient past. Ancient History illustrates the development of some of the distinctive features of modern society which shape our identity, such as social organisation, systems of law, governance and religion. Ancient History highlights how the world has changed, as well as the significant legacies that continue into the present. This insight gives context for the interconnectedness of past and present across a diverse range of societies. Ancient History aims to have students think historically and form a historical consciousness. A study of the past is invaluable in providing students with opportunities to explore their fascination with, and curiosity about, stories of the past and the mysteries of human behaviour.

Throughout the course of study, students develop an understanding of historical issues and problems by interrogating the surviving evidence of ancient sites, societies, individuals, events and significant historical periods. Students investigate the problematic nature of evidence, pose increasingly complex questions about the past and develop an understanding of different and sometimes conflicting perspectives on the past. A historical inquiry process is integral to the study of Ancient History. Students use the skills of historical inquiry to investigate the past. They devise historical questions and conduct research, analyse historical sources and evaluate and synthesise evidence from sources to formulate justified historical

#### **General subject**

arguments. Historical skills form the learning and subject matter provides the context. Learning in context enables the integration of historical concepts and understandings into four units of study: Investigating the Ancient World, Personalities in their times, Reconstructing the Ancient World, and People, power and authority.

A course of study in Ancient History empowers students with multi-disciplinary skills in analysing and evaluating textual and visual sources, constructing arguments, challenging assumptions, and thinking both creatively and critically. Ancient History students become knowledge creators, productive and discerning users of technology, and empathetic, open-minded global citizens.

#### **Pathways**

A course of study in Ancient History can establish a basis for further education and employment in the fields of archaeology, history, education, psychology, sociology, law, business, economics, politics, journalism, the media, health and social sciences, writing, academia and research.

#### **Objectives**

By the conclusion of the course of study, students will:

- devise historical questions and conduct research
- comprehend terms, concepts and issues
- analyse evidence from historical sources
- evaluate evidence from historical sources
- synthesise evidence from historical sources
- communicate to suit purpose.

# Biology

Biology provides opportunities for students to engage with living systems. In Unit 1, students develop their understanding of cells and multicellular organisms. In Unit 2, they engage with the concept of maintaining the internal environment. In Unit 3, students study biodiversity and the interconnectedness of life. This knowledge is linked in Unit 4 with the concepts of heredity and the continuity of life.

Students will learn valuable skills required for the scientific investigation of questions. In addition, they will become citizens who are better informed about the world around them and who have the critical skills to evaluate and make evidence-based decisions about current scientific issues.

Biology aims to develop students':

- sense of wonder and curiosity about life
- respect for all living things and the environment
- understanding of how biological systems interact and are interrelated, the flow of matter and energy through and between these systems, and the processes by which they persist and change
- understanding of major biological concepts, theories and models related to biological systems at all scales, from subcellular processes to ecosystem dynamics
- appreciation of how biological knowledge has developed over time and continues to develop; how scientists use biology in a wide range of applications; and how biological knowledge influences society in local, regional and global contexts

#### **General subject**

- ability to plan and carry out fieldwork, laboratory and other research investigations, including the
- collection and analysis of qualitative and quantitative data and the interpretation of evidence
- ability to use sound, evidence-based arguments creatively and analytically when evaluating claims and applying biological knowledge
- ability to communicate biological understanding, findings, arguments and conclusions using appropriate representations, modes and genres.

#### Pathways

A course of study in Biology can establish a basis for further education and employment in the fields of medicine, forensics, veterinary, food and marine sciences, agriculture, biotechnology, environmental rehabilitation, biosecurity, quarantine, conservation and sustainability.

#### Objectives

By the conclusion of the course of study, students will:

- describe ideas and findings
- apply understanding
- analyse data
- interpret evidence
- evaluate conclusions, claims and processes
- investigate phenomena.

## **Building & Construction Skills**

Technologies are an integral part of society as humans seek to create solutions to improve their own and others' quality of life. Technologies affect people and societies by transforming, restoring and sustaining the world in which we live. In an increasingly technological and complex world, it is develop the important to knowledge, understanding and skills associated with traditional and contemporary tools and materials used by Australian building and construction industries to construct structures. The building and construction industry transforms raw materials into structures wanted by society. This adds value for both enterprises and consumers. Australia has strong building and construction industries that continue to provide employment opportunities.

Building & Construction Skills includes the study of the building and construction industry's practices and production processes through students' application in, and through, trade learning contexts. Industry practices are used by building and construction enterprises to manage the construction of structures from raw materials. Production processes combine the production skills and procedures required to construct structures. Students engage in applied learning to demonstrate knowledge and skills in units that meet local needs, available resources and teacher expertise. Through both individual and collaborative learning experiences, students learn to meet customer expectations of high-quality structures at a specific price and time.

Applied learning supports students' development of transferable 21st century, literacy and numeracy skills relevant to future employment opportunities in the domestic, commercial and civil construction industrial sectors. Students learn to interpret drawings and technical information, and select and demonstrate safe practical production processes using hand and power tools, machinery and equipment. They communicate using oral, written and graphical modes and organise, calculate, plan, evaluate and adapt production processes and the structures they construct. The majority of learning is done through construction tasks that relate to business and industry. Students work with each other to solve problems and complete practical work.

#### **Pathways**

A course of study in Building & Construction Skills can establish a basis for further education and employment in civil, residential or commercial building and construction fields. These include roles such as bricklayer, plasterer, concreter, painter and decorator, carpenter, joiner, roof tiler, plumber, steel fixer, landscaper and electrician.

#### **Objectives**

By the conclusion of the course of study, students should:

- demonstrate practices, skills and procedures
- interpret drawings and technical information
- select practices, skills and procedures
- sequence processes
- evaluate skills and procedures, and structures
- adapt plans, skills and procedures.

#### Structure

Building & Construction Skills is a four-unit course of study. This syllabus contains six QCAA-developed units as options for schools to select from to develop their course of study.

Unit option	Unit title
Unit option A	Site preparation and foundations
Unit option B	Framing and cladding
Unit option C	Fixing and finishing
Unit option D	Construction in the domestic building industry
Unit option E	Construction in the commercial building industry
Unit option F	Construction in the civil construction industry

#### Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Building & Construction Skills are:

Technique	Description	Response requirements
Practical demonstration	Students perform a practical demonstration for a unit context artefact and reflect on industry practices, and production skills and procedures.	<ul> <li>Practical demonstration</li> <li>Practical demonstration: the skills and procedures used in 3–5 production processes</li> <li>Documentation</li> <li>Multimodal (at least two modes delivered at the same time): up to 3 minutes, 6 A4 pages, or equivalent digital media</li> </ul>
Project	Students construct a unit context structure and document the construction process.	Structure Structure: 1 unit-specific structure constructed using the skills and procedures in 5–7 production processes Construction process Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media

Business is multifaceted. It is a contemporary discipline with representation in every aspect of society including individuals, community and government. Business, as a dynamic and evolving discipline, is responsive to environmental changes such as emerging technologies, globalisation, sustainability, resources, economy and society.

The study of business is relevant to all individuals in a rapidly changing, technology-focused and innovation-driven world. Through studying Business, students are challenged academically and exposed to authentic practices. The knowledge and skills developed in Business will allow students to contribute meaningfully to society, the workforce and the marketplace and prepare them as potential employees, employers, leaders, managers and entrepreneurs of the future.

Students investigate the business life cycle from the seed to post-maturity stage and develop skills in examining business data and information. Students learn business concepts, theories and strategies relevant to leadership, management and entrepreneurship. A range of business environments and situations is explored. Through this exploration, students investigate the influence of and implications for strategic development in the functional areas of finance, human resources, marketing and operations.

Learning in Business integrates an inquiry approach with authentic case studies. Students become critical observers of business practices by applying an inquiry process in undertaking investigations of business situations. They use a variety of technological, communication and analytical tools to comprehend, analyse and interpret business data and information. Students evaluate strategies using business criteria that are adaptable flexible. and underpinned by leadership. creativitv communication. and sophistication of thought.

This multifaceted course creates a learning environment that fosters ambition and success, while being mindful of social and ethical values and responsibilities. Opportunity is provided to develop interpersonal and leadership skills through a range of individual and collaborative activities in teaching and learning. Business develops students' confidence and capacity to participate as members or leaders of the global workforce through the integration of 21st century skills.

Business allows students to engage with the dynamic business world (in both national and global contexts), the changing workforce and emerging digital technologies. It addresses contemporary implications, giving students a competitive edge in the workplace as socially responsible and ethical members of the business community, and as informed citizens, employees, consumers and investors.

#### Pathways

A course of study in Business can establish a basis for further education and employment in the fields of business management, business development, entrepreneurship, business analytics, economics, business law, accounting and finance, international business, marketing, human resources management and business information systems.

#### **Objectives**

By the conclusion of the course of study, students will:

- describe business situations and environments
- explain business concepts and strategies
- analyse and interpret business situations
- evaluate business strategies
- create responses that communicate meaning to suit audience, context and purpose.

#### Structure

Unit 1	Unit 2	Unit 3	Unit 4

# **Business Studies**

Business Studies provides opportunities for students to develop practical business knowledge and skills for use, participation and work in a range of business contexts. Exciting and challenging career opportunities exist in a range of business contexts.

A course of study in Business Studies focuses on business essentials and communication skills delivered through business contexts. Students explore business concepts and develop business practices to produce solutions to business situations.

Business practices provide the foundation of an organisation to enable it to operate and connect with its customers, stakeholders and community. The business practices explored in this course of study could include working in administration, working in finance, working with customers, working in marketing, working in events, and entrepreneurship.

In a course of study, students develop their business knowledge and understanding through applying business practices in business contexts, such as retail, health services, entertainment, tourism, travel and mining. Schools may offer a range of situations and experiences to engage in authentic learning experiences through connections within the school, local community or organisations, businesses and professionals outside of the school. These situations and experiences provide students with opportunities to develop skills important in the workplace to successfully participate in future employment.

Students develop effective decision-making skills and learn how to plan, implement and evaluate business practices, solutions and outcomes, resulting in improved literacy, numeracy and 21st century skills. They examine business information and apply their knowledge and skills related to business situations. The knowledge and skills developed in Business Studies enables students to participate effectively in the business world and as citizens dealing with issues emanating from business activities.

#### **Pathways**

A course of study in Business Studies can establish a basis for further education and employment in office administration, data entry, retail, sales, reception, small business, finance administration, public relations, property management, events administration and marketing.

#### **Objectives**

By the end of the course of study, students should:

- explain business concepts, processes and practices
- examine business information
- apply business knowledge
- communicate responses
- evaluate projects.

#### Structure

Business Studies is a four-unit course of study. This syllabus contains six QCAA-developed units as options for schools to select from to develop their course of study.

Unit option	Unit title
Unit option A	Working in administration
Unit option B	Working in finance
Unit option C	Working with customers
Unit option D	Working in marketing
Unit option E	Working in events
Unit option F	Entrepreneurship

#### Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Business Studies are:

Technique	Description	Response requirements
Extended response	Students respond to stimulus related to a business scenario about the unit context.	One of the following:
		• Multimodal (at least two modes delivered at the same time): up to 7 minutes, 10 A4 pages, or equivalent digital media
		• Spoken: up to 7 minutes, or signed equivalent
		• Written: up to 1000 words
Project S s t	Students develop a business solution for a scenario about the unit context.	Action plan - One of the following:
		• Multimodal (at least two modes delivered at the same time): up to 5 minutes, 6 A4 pages, or equivalent digital media
		• Spoken: up to 4 minutes, or signed equivalent
		• Written: up to 600 words
		Evaluation - One of the following:
		• Multimodal (at least two modes delivered at the same time): up to 4 minutes, 4 A4 pages, or equivalent digital media
		• Spoken: up to 3 minutes, or signed equivalent
		Written: up to 400 words

# Certificate III in Business (BSB30120) including Certificate II in Workplace Skills (BSB20120) VET Subject

DELIVERED IN CONJUNCTION WITH BINNACLE TRAINING (RTO 31319)

#### Why study this course?

This qualification reflects the role of individuals in a variety of Business Services job roles. The program will be delivered through class-based tasks as well as both simulated and real business environments at the school - involving the delivery of a range of projects and services within the school community. This program also includes student opportunities to design for a new product or service as part of our (non-accredited) Entrepreneurship Project - Binnacle Boss. An excellent work readiness program where students develop a range of essential workplace skills.

#### Students will acquire skills in:

- Leadership, innovation and creative thinking
- Customer service and teamwork

- Inclusivity and effective communication
- WHS and sustainability
- Financial literacy
- Business documentation

#### Pathway options may include:

• Pathway to Certificate IV or Diploma in Business, or University Degree pathway

#### What will students achieve?

- BSB30120 Certificate III in Business (8 QCE credits max)
- Successful completion of the Certificate III in Business may contribute towards a student's Australian Tertiary Admission Rank (ATAR).

Code	Title	Code	Title
BSBPEF201	Support personal wellbeing in the workplace	BSBXTW301	Work in a team
BSBPEF301	Organise personal work priorities	BSBCRT311	Apply critical thinking skills in a team environment
FNSFLT311	Develop and apply knowledge of personal finances	BSBTEC301	Design and produce business documents
BSBWHS311	Assist with maintaining workplace safety	BSBWRT311	Write simple documents
BSBSUS211	Participate in sustainable work practices	BSBTEC201	Use business software applications
BSBXCM301	Engage in workplace communication	BSBTEC203	Research using the internet
BSBTWK301	Use inclusive work practices		
Optional additional units of competency			
BSBCMM411	Make presentations*	BSBPEF402	Develop personal work priorities*

#### **Units of Competency**

#### How will the students be assessed?

Program delivery will combine both class-based tasks and practical components in a real or simulated Business environment at the school. This involves the delivery of a range of projects and services within their school community. A range of teaching/learning strategies will be used to deliver the competencies. These include:

- Practical tasks
- Hands-on activities including customer interactions.
- Group projects.
- e-Learning projects

#### Fees

\$395.00 Binnacle Training Fees

#### Entry Requirements

Nil

#### Language, Literacy and Numeracy Skills

A Language, Literacy & Numeracy (LLN) Screening process is undertaken at the time of initial enrolment (or earlier) to ensure students have the capacity to effectively engage with the content. Please refer to Binnacle Training's Student Information document for a snapshot of reading, writing and numeracy skills that would be expected in order to satisfy competency requirements.

#### **Product Disclosure Statement**

This Subject Outline is to be read in conjunction with Binnacle Training's Program Disclosure Statement (PDS). The PDS sets out the services and training products Binnacle Training provides, and those services carried out by the 'Partner School' (i.e., the delivery of training and assessment services).

# Certificate III in Fitness (SIS30321) including Certificate II in Sport and Recreation (SIS20122) VETSubject

DELIVERED IN CONJUNCTION WITH BINNACLE TRAINING (RTO 31319)

#### Why study this course?

This qualification provides a pathway to work as a fitness instructor in settings such as fitness facilities, gyms, and leisure and community centres. Students gain the entry-level skills required of a Fitness Professional (Group Exercise Instructor or Gym Fitness Instructor). Students facilitate programs within their school community including:

- Community fitness programs
- Strength and conditioning for athletes and teams
- 1-on-1 and group fitness sessions with male adults, female adults and older adult clients.

#### Students will acquire skills in:

- Client screening and health assessment
- Planning and instructing fitness programs
- Deliver 1-on-1 and group fitness programs
- Exercise science and nutrition
- Anatomy and physiology

#### **Units of Competency**

#### Pathway options may include:

- Group exercise instructor or gym fitness
   instructor
- Pathway into Certificate IV in Fitness or University degree

#### What will students achieve?

- SIS30321 Certificate III in Fitness (max. 8 QCE Credits)
- Entry qualification: SIS20122 Certificate II in Sport and Recreation
- The nationally recognised First Aid competency - HLTAID011 Provide First Aid
- Community Coaching Essential Skills Course (nonaccredited), issued by Australian Sports Commission
- Successful completion of the Certificate III in Fitness may contribute towards a student's Australian Tertiary Admission Rank (ATAR)

Code	Title	Code	Title
HLTWHS001	Participate in workplace health and safety	SISFFIT035	Plan group exercise sessions
BSBPEF301	Organise personal work priorities	SISFFIT036	Instruct group exercise sessions
SISXIND011	Maintain sport, fitness and recreation industry knowledge	SISFFIT032	Complete pre-exercise screening and service orientation
BSBOPS304	Deliver and monitor a service to customers	SISFFIT033	Complete client fitness assessments
BSBSUS211	Participate in sustainable work practices	SISFFIT052	Provide healthy eating information
BSBPEF202	Plan and apply time management*	SISFFIT040	Develop and instruct gym-based exercise programs for individual clients
SISSPAR009	Participate in conditioning for sport*	SISFFIT047	Use anatomy and physiology knowledge to support safe and effective exercise
SISXCCS004	Provide quality service	HLTAID011	Provide First Aid
SISXEMR003	Respond to emergency situations	SISXFAC006	Maintain activity equipment*
SISOFLD001	Assist in conducting recreation sessions*		

#### How will the students be assessed?

Program delivery will combine both class-based tasks and practical components in a real sport and fitness environment at the school. This involves the delivery of a range of practicals within their school community and to adult (18+) and older adult (55+) clients. A range of teaching/learning strategies will be used to deliver the competencies. These include:

- Practical tasks
- Hands-on activities including client interactions.
- · Group projects.
- e-Learning projects

#### Fees

**\$495.00** Binnacle Training Fees plus \$75 First Aid.

#### **Entry Requirements**

Nil.

#### Language, Literacy and Numeracy Skills

A Language, Literacy and Numeracy (LLN) Screening process is undertaken at the time of initial enrolment (or earlier) to ensure students have the capacity to effectively engage with the content and to identify support measures as required.

#### **Product Disclosure Statement**

This Course Outline is to be read in conjunction with Binnacle Training's Program Disclosure Statement (PDS). Please note that some training and assessment services are delivered by the School (as Third Party) and the PDS sets out the services and training products Binnacle Training as RTO provides and those services carried out by the School as Third Party (i.e. the facilitation of training and assessment services). To access Binnacle's PDS, please visit: www.binnacletraining.com.au/rto

# Certificate III in Health Services Assistance (HLT33115) including Certificate II in Health Support Services(HLT23221)

DELIVERED IN PARTNERSHIP WITH CONNECT 'N' GROW® RTO number: 40518

#### **VET Subject**

#### **Qualification description**

Health and community services training is linked to the largest growth industry in Australia, estimated to grow by 20% over the next five years. These programs combine to provide students with entry level skills necessary for a career in the health sector and also provide a pathway to pursue further study. Skills acquired in this course include first aid, effective communication, workplace health and safety, infection control, understanding common medical terminology, conducting health checks, recognising healthy body systems and working with diverse people.

Refer to training.gov.au for specific information about the qualification.

#### **Entry requirements**

There are no entry requirements to commence the first year of this qualification; however successful completion of the Certificate II in Health Support Services is required to continue into the Certificate III coursework.

International students may be able to enrol depending on their visa and/or the school's CRICOS registration. Contact the VET Coordinator for more information.

#### **Duration and location**

This is a two-year course delivered on site to senior school students and in partnership with Connect 'n' Grow®.

#### **Delivery modes**

A range of delivery modes will be used during the teaching and learning of this qualification. These include:

- · face-to-face training
- · practicals and scenarios
- online learning

#### Fees

The total Fee For Service cost of these courses [Cert II and Cert III] is \$1198.

Students may be able to access funding to help subsidise the cost of their training. Contact the VET Coordinator or Connect 'n' Grow® to explore potential options.

#### **QCE** Points

Maximum 8 (up to 4 points for completion of the Certificate II and up to a further 4 points for completion of the Certificate III).

Maximum 8 (up to 4 points for completion of the Certificate II and up to a further 4 points for completion of the Certificate III).

#### Assessment

Assessment is competency based. Assessment techniques include:

- observation
- folios of work
- questionnaires
- written and practical tasks

#### Work experience

Students are highly encouraged to complete a minimum of 20 hours work experience in a health or community service facility to strengthen their skills, knowledge and employability.

Connect 'n' Grow<sup>®</sup> considers industry experience to be a very important inclusion of the Certificate III qualifications.

#### Pathways

Potential options may include:

- Various Certificate IV qualifications
- Diploma of Nursing
- Bachelor Degrees (B.Nursing)
- entry level employment within the health industry.

#### **Course units Year 1 (Certificate II units)**

	· · · · · · · · · · · · · · · · · · ·
Unit code	Title
CHCCOM005	Communicate and work in health or community services *
HLTWHS001	Participate in workplace health and safety *
CHCDIV001	Work with diverse people *
HLTINF006	Apply basic principles and practices of infection prevention and control *
CHCCCS010	Maintain a high standard of Service *
HLTHSS011	Maintain stock inventory
BSBPEF202	Plan and apply time management
BSBINS201	Process and maintain workplace information
HLTHSS009	Perform general cleaning tasks in a clinical setting
HLTWHS005	Conduct manual tasks safely
BSBOPS203	Deliver a service to customers
CHCPRP005	Engage with health professionals and the health system *

#### \*units Credit Transferred from Cert II into the Cert III

#### **Course units Year 2 (Certificate III units)**

Unit code	Title
HLTAAP001	Recognise healthy body systems
BSBMED301	Interpret and apply medical terminology
BSBWOR301*	Organise personal work priorities and development
BSBPEF301	Organise personal work priorities
HLTAID011	Provide first aid
HLTAID009	Provide cardiopulmonary resuscitation
HLTAID010	Provide basic emergency life support
CHCINM002	Meet community information needs
CHCCCS009	Facilitate responsible behaviour
CHCDIV002	Promote Aboriginal and/or Torres Strait Islander cultural safety

#### Obligation

Students will be provided with every opportunity to complete this qualification. Employment is not guaranteed upon completion. Students deemed competent in all units of competency will be awarded the qualification and a record of results by Connect 'n' Grow®. Students who achieve at least one unit of competency (but not the full qualification) will receive a Statement of Attainment

# Certificate II in Hospitality (SIS20322) including Certificate III in Hospitality (SIT30622)

#### **VET Subject**

RTO: This program of study is run in partnership with Blueprint Career Development RTO 30978.

Develop legendary service skills, industry smarts and the confidence to shine in places like restaurants, hotels, cafes, bars or even industrial food production operations — anywhere in the world!

This qualification is crafted for school students eager to elevate their customer care abilities and industry know-how. It shapes them into savvy professionals, blending personal judgment with wisdom from seasoned mentors for an exceptional learning journey.

Learning Zones:

- Beverage preparation
- Coaching others in work tasks
- Customer service & Assistance
- Food safety & hygiene
- Kitchen cleanliness
- Preparing and presenting food items
- Responsible service practices
- Safe work routines
- Social & cultural awareness

#### Job Opportunities:

- Barista
- Bartende
- Event assistant
- Food and beverage assistant
- Gaming assistant
- Receptionist

Could lead to opportunities such as:

- Shift supervisor
- Team leader

This program extends beyond the traditional classroom, plunging students into exhilarating real-life experiences. They will engage in hands-on projects and activities that link them to their school's vibrant community, offering a taste of authentic business and hospitality environments. Get ready for an adventure that's just around the corner!

This program also includes the following:

- Develop key competencies for immediate employability in a licensed venue RSA & RSG
- Engage in a minimum of 36 hospitality service periods
- Exclusive access to our immersive learning environment Bluey's Café
- Student opportunities to take part in a 5-star Hospitality Experience Program

#### **Learning Modes**

Program Structure – 12 units in total (maximum of 4 QCE credits available) Units of Competency- SIT20322 Certificate II in Hospitality			
SITXFSA005	Use hygienic practices for food safety	Group	
SITXWHS005	Participate in safe work practices	Core	
BSBTWK201	Work effectively with others	Core	
SITHCCC024	Prepare and present simple dishes	Group	
SITXCCS011	Interact with customers	Core	
SITHFAB021	Provide responsible service of alcohol	Group	
SITXCOM007	Show social and cultural sensitivity	Core	
SITHFAB025	Prepare and serve espresso coffee	Group	
SITHCCC025	Prepare and present sandwiches	Group	
SITHFAB024	Prepare and serve non-alcoholic beverages	Group	
SITHIND006	Source and use information on the tourism and travel industry	Core	
SITHIND007	Use hospitality skills effectively	Core	

Program Structure - 15 units in total - (maximum of 8 QCE credits available) Additional Units of Competency – SIT30622 – Certificate III in Hospitality			
SITHIND008	Work effectively in hospitality service	Core	
SITXCCS014	Provide service to customers	Core	
SITXHRM007	Coach others in job skills	Core	
SITHCCC024	Prepare and present simple dishes	Group B	

This is an example delivery plan only and is subject to change to meet individual school requirements.

#### Study Modes

Learning modes may include classroom, online, self-paced, simulated environment, projects and work placement. Requirements for student in-class and independent learning commitments are detailed in the program's Master Training & Assessment Strategy.

#### **Customised Learning Options**

Blueprint offers a wide selection of units and those listed below can be integrated into this program to support the unique requirements of specific cohorts. Any adjustments to the core program structure may require a recalculation of the expected training duration and must be guided by job outcome, local industry requirements and AQF level.

These elective units can be swapped with other Group B units from the main course structure only, they cannot be added – the total number of units cannot be increased.

#### **Optional Units of Competency**

Code	Description
HLTAID011	Provide first aid
SITHCCC025	Prepare and present sandwiches
SITHCCC028	Prepare appetisers and salads
SITHFAB027	Serve food and beverage
SITXCCS010	Provide visitor information
SITXFIN007	Process financial transactions

**NOTE:** The Core and Group A unit cannot be swapped - the program must include at least 3 Group B units.

**FEES:** Maximum fees payable. SIT20322 Certificate II in Hospitality \$1260. SIT30622 Certificate II and III in Hospitality \$1600. Annual program fees may be payable – approximately \$50 (dependent on student numbers).

# Certificate III in Sport Coaching (SIS30521) VET Subject Including Certificate II in Sport Coaching (SIS20321)

DELIVERED IN CONJUNCTION WITH BINNACLE TRAINING (RTO 31319)

#### Why study this course?

This qualification reflects the role of individuals who apply the skills and knowledge to coach participants up to an intermediate level in a specific sport. Students assist with facilitation of sport and coaching programs within their school community including:

- Officiating games
- Conducting individual and team coaching sessions
- Delivering conditioning sessions

#### Students will acquire skills in:

- Officiating games or competitions
- Coaching beginner and intermediate participants to develop skills
- Effective communication skills
- Managing risks in an SFR environment

#### Pathway options may include:

- Club level coach or official (When combined with individual sport's National Officiating / Coaching Accreditation Scheme (NOAS/NCAS) technical requirements)
- Pathway into Certificate IV in Fitness, Diploma in Sport or University degree

#### What will students achieve?

- SIS30521 Certificate III in Sport Coaching plus entry qualification: SIS20321 Certificate II in Sport Coaching (8 QCE Credits max)
- The nationally recognised First Aid competency - HLTAID011 Provide First Aid
- Community Coaching Essential Skills Course (nonaccredited), issued by Australian Sports Commission
- Successful completion of the Certificate III in Sports Coaching may contribute towards a student's Australian Tertiary Admission Rank (ATAR)

Code	Title	Code	Title
HLTAID011	Provide First Aid	SISXEMR003	Respond to emergency situations
SISXIND011	Maintain sport, fitness and recreation knowledge	BSBOPS403	Apply business risk management processes
BSBPEF301	Organise personal work priorities	SISSSCO001	Conduct sport coaching sessions with foundation level participants
SISSPAR009	Participate in conditioning for sport	SISSSCO002	Work in a community coaching role
SIRXWHS001	Work safely	SISSSCO003	Meet participant coaching needs
BSBSUS211	Participate in sustainable work practices	SISSSCO005	Continuously improve coaching skills and knowledge
HLTWHS001	Participate in workplace health and safety	SISSSCO012	Coach sport participants up to an intermediate level

#### **Units of Competency**

#### How will the students be assessed?

Program delivery will combine both class-based tasks and practical components in a real sport and coaching environment at the school. This involves the delivery of a range of practicals within their school community. A range of teaching/learning strategies will be used to deliver the competencies. These include:

- Practical tasks
- Hands-on activities including client interactions.
- · Group projects.
- e-Learning projects

#### Fees

**\$495.00** Binnacle Training Fees plus \$75 First Aid.

#### **Entry Requirements**

Nil.

#### Language, Literacy and Numeracy Skills

A Language, Literacy and Numeracy (LLN) Screening process is undertaken at the time of initial enrolment (or earlier) to ensure students have the capacity to effectively engage with the content and to identify support measures as required.

#### **Product Disclosure Statement**

This Course Outline is to be read in conjunction with Binnacle Training's Program Disclosure Statement (PDS). Please note that some training and assessment services are delivered by the School (as Third Party) and the PDS sets out the services and training products Binnacle Training as RTO provides and those services carried out by the School as Third Party (i.e. the facilitation of training and assessment services). To access Binnacle's PDS, please visit: www.binnacletraining.com.au/rto

# Certificate IV in Justice Studies (10971NAT) VET Subject

DELIVERED IN CONJUNCTION WITH PROFESSIONAL INVESTIGATORS COLLEGE OF AUSTRALASIA (RTO 40789)

#### **Qualification Description**

Certificate IV in Justice Studies is a nationally accredited course. The Certificate IV in Justice Studies is designed by justice professionals for people who would like to achieve employment in the criminal justice system and wish to develop a deeper understanding of the justice system.

**Aims:** The Certificate IV in Justice Studies course is designed to

- Provide students with a broad understanding of the justice system
- Develop the personal skills and knowledge that underpin employment in the justice system.

#### **Entry Requirements**

**Academic** - There are no formal entry requirements for this course. It is recommended that students have a pass in Year 10 English to demonstrate sufficient spoken and written comprehension to successfully complete all study and assessment requirements.

Attitude – students need to demonstrate independent learning skills

Students may be required to undertake an LLN test to determine suitability and any support needs.

QCE Credits: 8 Credits

#### Qualification

To attain this certificate, 10 units of competency (6 core and 4 elective) must be completed.

#### Learning experiences:

Content is delivered in a classroom environment through Legal Studies/Certificate IV in Justice Studies classes or via independent study in Study Lines at school. Course content is provided by the trainer and assessor. This can be in the format of online reading and activities, video/face-to-face workshops.

Technology required: access to the internet

#### Assessment:

Evidence contributing towards competency will be collected throughout the program. This process allows a student's competency to be assessed in a holistic approach that integrates a range of competencies. Evidence is gathered through the following: written projects, online quizzes, observation of skills, oral and written questions.

#### Pathways:

The Certificate IV in Justice Studies is recommended for students looking to gain employment or further study opportunities in justice and law-related fields such as the police service, justice-related occupations, corrective services, courts, legal offices, customs service, security industry and private investigations.

Code	Description
NAT10971001	Provide information and referral advice on justice-related issues
NAT10971002	Prepare documentation for court proceedings
NAT10971003	Analyse social justice issues
BSBXCM401	Apply communication strategies in the workplace
PSPREG033	Apply Regulatory Powers
BSBLEG421	Apply understanding of the Australian Legal System
PSPREG006	Produce formal record of interview
PSPREG010	Prepare a brief of evidence
PSPLEG002	Encourage compliance with legislation in public sector
PSPETH007	Uphold and support the values and principles of public service

#### Units of Competency delivered:

**Course Costs:** \$750 up-front fee (current at 30th April 2025)

#### Further information

Refund Policy: Please refer to the Student Handbook on the PICA website for the refund policy. Please note: Partial refunds will only be issued for extenuating circumstances at the discretion of the PICA CEO. A refund fee will be applied as an administration fee for requests for refund that are approved by PICA.

# Chemistry

Chemistry is the study of materials and their properties and structure. In Unit 1, students study atomic theory, chemical bonding, and the structure and properties of elements and compounds. In Unit 2, students explore intermolecular forces, gases, aqueous solutions, acidity and rates of reaction. In Unit 3, students study equilibrium processes and redox reactions. In Unit 4, students explore organic chemistry, synthesis and design to examine the characteristic chemical properties and chemical reactions displayed by different classes of organic compounds.

Chemistry aims to develop students':

- interest in and appreciation of chemistry and its usefulness in helping to explain phenomena and solve problems encountered in their ever-changing world
- understanding of the theories and models used to describe, explain and make predictions about chemical systems, structures and properties
- understanding of the factors that affect chemical systems and how chemical systems can be controlled to produce desired products
- appreciation of chemistry as an experimental science that has developed through independent and collaborative research, and that has significant impacts on society and implications for decision-making
- expertise in conducting a range of scientific investigations, including the collection and analysis of qualitative and quantitative data, and the interpretation of evidence
- ability to critically evaluate and debate scientific arguments and claims in order to solve problems and generate informed, responsible and ethical conclusions
- ability to communicate chemical understanding and findings to a range of audiences, including through the use of appropriate representations, language and nomenclature.

#### **Pathways**

A course of study in Chemistry can establish a basis for further education and employment in the fields of forensic science, environmental science, engineering, medicine, pharmacy and sports science.

#### **Objectives**

By the conclusion of the course of study, students will:

- describe ideas and findings
- apply understanding
- analyse data
- interpret evidence
- evaluate conclusions, claims and processes
- investigate phenomena.

#### Structure

Chemical fundamentals — structure, properties and reactionsMolecular interactions and reactionsEquilibrium, acids and redox reactionsStructure, synthe and design• Properties and structure of atoms• Intermolecular forces and gases• Chemical equilibrium systems• Properties and structure of organization• Chemical equilibrium systems• Properties and structure of organization• Properties and structure of materials• Aqueous solutions and acidity• Oxidation and reduction• Chemical synthe and design• Chemical reactions — reactants, products and energy obago• Rates of chemical reactions• Chemical synthe and design• Chemical synthe and design	<b>esis</b> Inic Esis

#### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4		
Summative internal assessment 1 (IA1): • Data test	10%	Summative internal assessment 3 (IA3): • Research investigation	20%	
Summative internal assessment 2 (IA2):2• Student experiment				
Summative external assessment (EA): 50% • Examination — combination response				

The need to communicate is the foundation for all language development. People use language achieve to their personal communicative needs \_\_\_\_ to express. exchange, interpret and negotiate meaning, and to understand the world around them. The central goal for additional language acquisition is communication. Students do not simply learn a language — they participate in a range of interactions in which they exchange meaning and become active participants in understanding and constructing written, spoken and visual texts.

Additional language acquisition provides students with opportunities to reflect on their understanding of a language and the communities that use it, while also assisting in the effective negotiation of experiences and meaning across cultures and languages. Communicating with people from Chinesespeaking communities provides insight into the purpose and nature of language and promotes greater sensitivity to, and understanding linauistic structures. of. including the linguistic structures of English. As students develop the ability to explore cultural diversity and similarities between another language and their own, this engagement with other languages and cultures fosters intercultural understanding.

Language acquisition occurs in social and cultural settings. It involves communicating across a range of contexts for a variety of purposes, in a manner appropriate to context. As students experience and evaluate a range of different text types, they reorganise their thinking to accommodate other linguistic and intercultural knowledge and textual conventions. This informs their capacity to create texts for a range of contexts, purposes and audiences.

Central to the capacity to evaluate and create texts are the skills of critical and creative thinking, intellectual flexibility and problemsolving. Acquiring an additional language provides the opportunity to develop these interrelated skills, and requires students to use language in a meaningful way through the exchange of information, ideas and perspectives relevant to their life experiences.

For exchanges to be relevant and useful, additional language acquisition must position students at the centre of their own learning. When students communicate their own aspirations, values, opinions, ideas and relationships, the personalisation of each student's learning creates a stronger connection with the language. Activities and tasks are developed to fit within the student's life experience.

The ability to communicate in an additional language such as Chinese is an important 21st century skill. Students develop knowledge, understanding and skills that enable successful participation in a global society. Communication in an additional language expands students' horizons and opportunities as national and global citizens.

Additional language acquisition contributes to and enriches intellectual, educational, linguistic, metacognitive, personal, social and cultural development. It requires intellectual discipline and systematic approaches to learning, which are characterised by effective planning and organisation, incorporating processes of selfmanagement and self-monitoring.

#### Pathways

A course of study in Chinese can establish a basis for further education and employment in many professions and industries, particularly those where the knowledge of an additional language and the intercultural understanding it encompasses, could be of value, such as business, hospitality, law, science, technology, sociology and education.

#### **Objectives**

By the conclusion of the course of study, students will:

- comprehend Chinese to understand information, ideas, opinions and experiences
- identify tone, purpose, context and audience to infer meaning

- analyse and evaluate information and ideas to draw conclusions
- apply knowledge of language elements of Chinese to construct meaning
- structure, sequence and synthesise information to justify opinions and perspectives
- communicate using contextually appropriate Chinese.

Summative internal assessment 2 (IA2): Examination — extended response	25%	Summative external assessment (EA): Examination — combination response	25%

Dance uses the body as an instrument for expression and communication of ideas. It encourages the holistic development of a person, providing a way of knowing about oneself, others and the world. It is a means by which cultural heritage is preserved and translated through time.

Engaging in dance allows students to develop provides important, lifelong skills. Dance opportunities for students to critically examine and reflect on their world through higher order thinking and movement. Through studying Dance as both artist and as audience, students will develop a range of interrelated concepts, understanding and skills in dance as an art form and as a means of social inclusion. Students will study dance in various genres and styles, embracing a variety of societal and historical viewpoints cultural. integrating new technologies in all facets of the subject. Historical, current and emerging dance practices, works and artists are explored in global contexts and Australian contexts, including the dance of Aboriginal peoples and Torres Strait Islander peoples. Students will learn about dance as it is now and explore its origins across time and cultures.

Exploring dance through the lens of making (choreography and performance) and responding engages students in creative and critical thinking. As students create and communicate meaning through dance they develop aesthetic and kinaesthetic intelligence in addition to personal and social skills. Self-confidence is developed alongside an awareness of, and respect for, the body. The study of this subject increases the quality of personal and physical wellbeing and fosters social inclusion through focused experiences of valued collaborative practice.

#### **Pathways**

This subject prepares young people for participation in the 21st century. Dance has the means to prepare students for future possibilities, with transversal skills and the capacity for flexible thinking and doing. The study of dance enables the application of critical thinking and literacy skills through which students create, demonstrate, express and reflect on meaning made through movement. Critical thinking and literacy skills are essential skills for the artist as both maker and audience, and learning in Dance prepares students to engage in a multimodal world. Dance

develops individuals who are culturally intelligent, creative, and complex and critically reflective thinkers.

A course of study in Dance can establish a basis for further education and employment in the field of dance, and to broader areas in creative industries, cultural institutions, administration and management, health, communications, education, public relations, research, science and technology.

#### **Objectives**

By the conclusion of the course of study, students will:

- demonstrate an understanding of dance concepts and skills
- apply literacy skills
- organise and apply the dance concepts
- analyse and interpret dance concepts and skills
- apply technical skills
- realise meaning through expressive skills
- create dance to communicate meaning
- evaluate dance, justifying the use of dance concepts and dance skills.

#### Structure

Unit 1	Unit 2	Unit 3	Unit 4
Moving bodies	Moving through environments	Moving statements	Moving my way
How does dance communicate meaning for different purposes and in different contexts?	How does the integration of the environment shape dance to communicate meaning?	How is dance used to communicate viewpoints?	How does dance communicate meaning for me?

#### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4		
Summative internal assessment 1 (IA1): • Performance	20%	Summative internal assessment 3 (IA3): • Dance work	35%	
Summative internal assessment 2 (IA2): • Choreography	20%			
Summative external assessment (EA): 25% • Examination — extended response				

# Design

The Design subject focuses on the application of design thinking to envisage creative products, services and environments. Designing is a complex and sophisticated form of problem-solving that uses divergent and convergent thinking approaches that can be practised and improved. Designers are separated from the constraints of production processes to allow them to appreciate and exploit innovative ideas.

In Unit 1, students will learn about and experience designing in the context of stakeholder-centred design. They will be introduced to the range and importance of stakeholders and how the design process is used to respond to their needs and wants. In Unit 2, students will learn about and experience designing in the context of commercial design, considering the role of the client and the influence of economic, social and cultural issues. They will use a collaborative design approach. In Unit 3, students will learn about and experience designing in the context of human-centred design. They will use designing with empathy as an approach as they respond to the needs and wants of a particular person. In Unit 4, students will learn about and experience designing in the context of sustainable design. They will explore design opportunities and design to improve economic, social and ecological sustainability.

The teaching and learning approach uses a design process grounded in the problem-based learning framework. This approach enables students to learn about and experience design through exploring needs, wants and opportunities; developing ideas and design concepts; using sketching and low-fidelity prototyping skills; and evaluating ideas. Students communicate design proposals to suit different audiences.

Students will learn how design has influenced the economic, social and cultural environment in which they live. They will understand the agency of humans in conceiving and imagining possible futures through design. Students will develop valuable 21st century skills in critical thinking, creative thinking, communication, collaboration and teamwork, personal and social skills, and information & communication technologies (ICT) skills. Collaboration, teamwork and communication are crucial skills needed to work in design teams and liaise with stakeholders. The design thinking students learn is broadly applicable to a range of professions and supports the development of critical and creative thinking.

#### **General subject**

Students will develop an appreciation of designers and their role in society. They will learn the value of creativity and build resilience as they experience iterative design processes, where the best ideas may be the result of trial and error and a willingness to take risks and experiment with alternatives. Design equips students with highly transferrable, future-focused thinking skills relevant to a global context.

#### Pathways

A course of study in Design can establish a basis for further education and employment in the fields of architecture, digital media design, fashion design, graphic design, industrial design, interior design and landscape architecture.

#### **Objectives**

By the conclusion of the course of study, students will:

- describe design problems and design criteria
- represent ideas, design concepts and design information using visual representation skills
- analyse needs, wants and opportunities using data
- devise ideas in response to design problems
- evaluate ideas to make refinements
- propose design concepts in response to design problems
- make decisions about and use modeappropriate features, language and conventions for particular purposes and contexts.

#### Structure

Unit 1	Unit 2	Unit 3	Unit 4
Stakeholder-centred design	Commercial design	Human-centred	Sustainable design
	influences	design	influences
Designing for others	<ul> <li>Responding to needs</li></ul>	<ul> <li>Designing with</li></ul>	<ul> <li>Responding to</li></ul>
	and wants	empathy	opportunities

#### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Design challenge	20%	Summative internal assessment 3 (IA3): • Project	25%
Summative internal assessment 2 (IA2): • Project	30%	Summative external assessment (EA): • Examination — extended response	25%

## **Digital Solutions**

Digital In Solutions, students learn about algorithms, computer languages and user interfaces through generating digital solutions to problems. They engage with data, information and applications to generate digital solutions that filter and present data in timely and efficient ways while understanding the need to encrypt and protect data. They understand computing's personal, social and economic impact, and the issues associated with the ethical integration of technology into our daily lives.

Students engage in problem-based learning that enables them to explore and develop ideas, generate digital solutions, and evaluate impacts, components and solutions. They understand that solutions enhance their world and benefit society. To generate digital solutions, students analyse problems and apply computational, design and systems thinking processes. Students understand that progress in the development of digital solutions is driven by people and their needs.

Learning in Digital Solutions provides students with opportunities to develop, generate and repurpose solutions that are relevant in a world where data and digital realms are transforming entertainment, education, business, manufacturing and many Australia's workforce other industries. and economy requires people who are able to collaborate, use creativity to be innovative and entrepreneurial, and transform traditional approaches in exciting new ways.

By using the problem-based learning framework, students develop confidence in dealing with complexity, as well as tolerance for ambiguity and persistence in working with difficult problems that may have many solutions. Students are able to communicate and work with others in order to achieve a common goal or solution. Students write computer programs to generate digital solutions that use data; require interactions with users and within systems; and affect people, the economy and environments. Solutions are generated using combinations of readily available hardware and software development environments, code libraries or specific instructions provided through programming. Some examples of digital solutions

include instructions for a robotic system, an instructional game, a productivity application, products featuring interactive data, animations and websites.

Digital Solutions prepares students for a range of careers in a variety of digital contexts. It develops thinking skills that are relevant for digital and nondigital real-world challenges. It prepares them to be successful in a wide range of careers and provides them with skills to engage in and improve the society in which we work and play. Digital Solutions develops the 21st century skills of critical and creative thinking, communication, collaboration and teamwork, personal and social skills, and information and communication technologies (ICT) skills that are critical to students' success in further education and life.

#### Pathways

A course of study in Digital Solutions can establish a basis for further education and employment in the fields of science, technologies, engineering and mathematics.

#### **Objectives**

By the conclusion of the course of study, students will:

- recognise and describe elements, components, principles and processes
- symbolise and explain information, ideas and interrelationships
- analyse problems and information
- determine solution requirements and criteria
- synthesise information and ideas to determine possible digital solutions
- generate components of the digital solution
- evaluate impacts, components and solutions against criteria to make refinements and justified recommendations
- make decisions about and use modeappropriate features, language and conventions for particular purposes and contexts.

#### Structure

Unit 1	Unit 2	Unit 3	Unit 4
Creating with code	Application and data solutions	Digital innovation	Digital impacts
<ul> <li>Understanding digital problems</li> <li>User experiences and interfaces</li> <li>Algorithms and programming techniques</li> <li>Programmed solutions</li> </ul>	<ul> <li>Data-driven problems and solution requirements</li> <li>Data and programming techniques</li> <li>Prototype data solutions</li> </ul>	<ul> <li>Interactions between users, data and digital systems</li> <li>Real-world problems and solution requirements</li> <li>Innovative digital solutions</li> </ul>	<ul> <li>Digital methods for exchanging data</li> <li>Complex digital data exchange problems and solution requirements</li> <li>Prototype digital data exchanges</li> </ul>

#### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1):	25%	Summative internal assessment 3 (IA3):	25%
Summative internal assessment 2 (IA2): • Digital solution	25%	Summative external assessment (EA): • Examination — combination response	25%
# Diploma of Business (BSB50120)

# Vet Subject

DELIVERED IN CONJUNCTION WITH PRESTIGE SERVICES TRAINING (RTO 31981)

This qualification would apply to individuals with a vision to enter into various job titles including Managers, Executive Officers, Program Consultants, and Program Co-ordinators. Individuals in these roles may possess substantial experience in a range of settings, but seek to further develop their skills across a wide range of business functions.

The course provides an in-depth understanding of fundamental business concepts and practices.

#### **Delivery:**

BSB50120 Diploma of Business consists of five (5) core units and seven (7) electives tailored based on your target outcomes.

#### QCE and ATAR:

The course contributes 8 credits towards the QCE and can contribute to a student's ATAR.

#### **Tertiary Education:**

The Course may be credited towards a Bachelor's degree.

#### **Expected Year 10 Minimum Result:**

A C in Year 10 English and an independent work ethic.

#### Structure

The program is structured to provide a balanced mix of theoretical learning and practical application, ensuring you're well-equipped to handle real-world business challenges.

Core			
Code	Description		
BSBCRT511	Develop critical thinking in others		
BSBFIN501	Manage budgets and financial plans		
BSBOPS501	Manage business resources		
BSBXCM501	Lead communication in the workplace		
BSBSUS511	Develop workplace policies and procedures for sustainability		

Elective			
Code	Description		
BSBTWK503	Manage meetings		
BSBOPS504	Manage business risk		
BSBPMG430	Undertake project work		
BSBPEF501	Manage personal and professional development		
BSBSTR502	Facilitate continuous improvement		
BSBMKG541	Identify and evaluate marketing opportunities		
BSBCMM411	Make presentations		

Cost: \$2,799.00

#### **Enrolment and Eligibility**

To enrol with Prestige Service Training, applicants must have completed Year 10 or equivalent, and demonstrate proficiency in English by the course start date. Enrolment confirmation includes completing the LLN Assessment, sent via email. A USI and proof of identity are required. Reliable internet, basic computer skills, and access to necessary software are essential.

# Drama

Drama interrogates the human experience by investigating, communicating and embodying stories, experiences, emotions and ideas that reflect the human experience. It allows students to look to the past with curiosity, and explore inherited traditions of artistry to inform their own artistic practice and shape their world as global citizens. Drama is created and performed in diverse spaces, including formal and informal theatre spaces, to achieve a wide range of purposes. Drama engages imaginative students in meaning-making processes and involves them using a range of artistic skills as they make and respond to dramatic works. The range of purposes, contexts and audiences provides students with opportunities to experience, reflect on, understand, communicate, collaborate and appreciate different perspectives of themselves, others and the world in which they live.

Across the course of study, students will develop a range of interrelated skills of drama that will complement the knowledge and processes needed to create dramatic action and meaning. They will learn about the dramatic languages and how these contribute to the creation, interpretation and critique of dramatic action and meaning for a range of purposes. A study of a range of forms and styles in a variety of inherited traditions, current practice and emerging trends, including those from different cultures and contexts, forms a core aspect of the learning. Drama provides opportunities for students to learn how to engage with dramatic works as both artists and audience through the use of critical literacies.

In Drama, students engage in aesthetic learning experiences that develop the 21st century skills of critical thinking, creative thinking, communication, collaboration and teamwork, personal and social skills, and digital literacy. They learn how to reflect on their artistic, intellectual, emotional and kinaesthetic understanding as creative and critical thinkers and curious artists. Additionally, students will develop personal confidence, skills of inquiry and social skills as they work collaboratively with others.

Drama engages students in the making of and responding to dramatic works to help them realise their creative potential as individuals. Learning in Drama promotes a deeper and more empathetic understanding and appreciation of others and communities. Innovation and creative thinking are at the forefront of this subject, which contributes to equipping students with highly transferable skills that encourage them to imagine future perspectives and possibilities.

### Pathways

A course of study in Drama can establish a basis for further education and employment in the field of drama, and to broader areas in creative industries. cultural institutions, administration and management, law, communications, education, public relations, research, science and technology. The understanding and skills built in Drama connect strongly with careers in which it is important to understand different social and cultural perspectives in a range of contexts, and to communicate meaning in functional and imaginative ways.

### **Objectives**

- demonstrate skills of drama
- apply literacy skills
- interpret purpose, context and text
- manipulate dramatic languages
- analyse dramatic languages
- evaluate dramatic languages.

Unit 1	Unit 2	Unit 3	Unit 4
Share	Reflect	Challenge	Transform
How does drama promote shared understandings of the human experience?	How is drama shaped to reflect lived experience?	How can we use drama to challenge our understanding of humanity?	How can you transform dramatic practice?

## Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Performance	20%	Summative internal assessment 3 (IA3): • Practice-led project	35%
Summative internal assessment 2 (IA2): 2 • Dramatic concept			
Summative • Exami	external ination —	assessment (EA): 25% - extended response	

# **Drama in Practice**

The arts are woven into the fabric of community. They have the capacity to engage and inspire students, enriching their lives, stimulating curiosity and imagination, and encouraging them to reach their creative and expressive potential. Arts subjects provide opportunities for students to learn problem-solving processes, design and create art, and use multiple literacies to communicate intention with diverse audiences.

Drama exists wherever people present their experiences, ideas and feelings through re-enacted stories. From ancient origins in ritual and ceremony to contemporary live and mediated presentation in formal and informal theatre spaces, drama gives expression to our sense of self, our desires, our relationships and our aspirations. Whether the purpose is to entertain, celebrate or educate, engaging in drama enables students to experience, reflect on, communicate and appreciate different perspectives of themselves, others and the world they live in.

Drama in Practice gives students opportunities to make and respond to drama by planning, creating, adapting, producing, performing, interpreting and evaluating a range of drama works or events in a variety of settings. A key focus of this syllabus is engaging with school and/or local community contexts and, where possible, interacting with practising artists.

As students gain practical experience in a number of onstage and offstage roles, they recognise the role drama plays and value the contribution it makes to the social and cultural lives of local, national and international communities.

Students participate in learning experiences in which they apply knowledge and develop creative and technical skills in communicating ideas and intention to an audience. They also learn essential workplace health and safety procedures relevant to the drama and theatre industry, as well as effective work practices and industry skills needed by a drama practitioner. Individually and in groups, where possible, they shape and express dramatic ideas of personal and social significance that serve particular purposes and contexts.

## **Pathways**

Drama in Practice students identify and follow creative and technical processes from conception to realisation, which foster cooperation and creativity, and help students to develop problemsolving skills and gain confidence and resilience. Learning is connected to relevant industry practice and opportunities, promoting future employment, and preparing students as agile, competent, innovative, and safe workers who can work collaboratively to solve problems and complete project-based work in various contexts.

A course of study in Drama in Practice can establish a basis for further education and employment areas across a range of fields such as creative industries, education, venue and event management, marketing, communications, humanities, health, sciences and technology.

### **Objectives**

- use drama practices
- plan drama works
- communicate ideas
- evaluate drama works.

Drama in Practice is a four-unit course of study. This syllabus contains four QCAA-developed units as options for schools to combine in any order to develop their course of study.

Unit option	Unit title
Unit option A	Collaboration
Unit option B	Community
Unit option C	Contemporary
Unit option D	Commentary

## Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Drama in Practice are:

Technique	Description	Response requirements
Devising project	Students plan, devise and evaluate a scene for a	<b>Devised scene</b> Up to 4 minutes (rehearsed)
	to the unit.	Planning and evaluation of devised scene One of the following:
		<ul> <li>Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media</li> </ul>
		• Written: up to 600 words
		• Spoken: up to 4 minutes, or signed equivalent
Directorial project	Students plan, make and evaluate a director's brief for an excerpt of a published script relevant to the unit.	<b>Director's brief</b> Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media
		Planning and evaluation of the director's brief One of the following:
		<ul> <li>Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media</li> </ul>
		Written: up to 600 words
		• Spoken: up to 4 minutes, or signed equivalent
Performance	Students perform an excerpt of a published script or a devised scene connected to the directorial or devising project.	<b>Performance</b> Performance (live or recorded): up to 4 minutes

# **Economics**

The discipline of economics is integral to every aspect of our lives: our employment opportunities, business operations and living standards. The subject challenges us to use evidence and be innovative when solving problems in a world of complex global relationships and trends, where a knowledge of economic forces and flows leads to better decisions. In Economics, decision-making is core: how to allocate and distribute scarce resources to maximise well-being.

Economic literacy is essential for understanding current issues to make informed judgments and participate effectively in society. Students develop knowledge and cognitive skills to comprehend, apply analytical processes and use economic knowledge. They examine data and information to determine validity and consider economic policies from various perspectives. Economic models and analytical tools are used to investigate and evaluate outcomes to make decisions. In the process, students appreciate ideas, viewpoints and values underlying economic issues.

The field of economics is typically divided into two: microeconomics being the study of individuals, businesses: households and and macroeconomics, the study of economy-wide phenomena. Within this context, students study opportunity costs, economic models and the market forces of demand and supply. These concepts are applied to real-world issues of how and why markets may be modified, and the effects of government strategies and interventions. The final units of the course dissect and interpret the complex nature of international economic relationships and the dynamics of Australia's place in the global economy. This segues to Australian economic management, as students analyse trends and evaluate economic policies.

Curiosity is essential when studying Economics how can we best use and allocate resources and production, and what are the consequences of trade-offs? Accordingly, learning is centred on an inquiry approach that facilitates reflection and metacognitive awareness. Intellectual rigour is sharpened by the appraisal of a variety of oftencontradictory data and information, which tests the role of assumptions in economic models, ideas and perspectives. In the 21st century, the study of economics develops the transferable skills of critical thinking and questioning of assumptions. As students develop intellectual flexibility, digital literacy and economic thinking skills, they increase the tertiary pathways and opportunities in the workplace open to them.

Economics is based on possibility and optimism. It appeals to students from Humanities and Business, and those interested in the broader relevance of Mathematics, Technology and Science because of their connections with economic forces. The subject positions students to think deeply about the challenges that confront individuals, business and government, and provides students with tools to think creatively beyond what is known and predictable.

Economics is an excellent complement for students who want to solve real-world science or environmental problems and participate in government policy debates. It provides a competitive advantage for career options where students are aiming for management roles and developing their entrepreneurial skills to create business opportunities as agents of innovation.

## Pathways

A course of study in Economics can establish a basis for further education and employment in the fields of economics, econometrics, management, data analytics, business, accounting, finance, actuarial science, law and political science.

## **Objectives**

- comprehend economic concepts, principles and models
- analyse economic issues
- evaluate economic outcomes
- create responses that communicate economic meaning to suit the intended purpose.

Unit 1	Unit 2	Unit 3	Unit 4
Markets and models	Modified markets	International economics	Contemporary macroeconomics
<ul><li>The basic economic problem</li><li>Economic flows</li><li>Market forces</li></ul>	<ul> <li>Markets and efficiency</li> <li>Case options of market measures and strategies</li> </ul>	<ul> <li>International trade</li> <li>Global economic issues</li> </ul>	<ul> <li>Macroeconomic objectives and theory</li> <li>Economic indicators and past budget stances</li> <li>Economic management</li> </ul>

## Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Examination — combination response	25%	Summative internal assessment 3 (IA3): • Examination — extended response	25%
Summative internal assessment 2 (IA2):	25%	Summative external assessment (EA): • Examination — combination response	25%

# Engineering

Engineering includes the study of mechanics, materials science and control technologies through real-world engineering contexts where students engage in problem-based learning. Students learn to explore complex, open-ended problems and develop engineered solutions. They recognise and describe engineering problems, determine solution success criteria, develop and communicate ideas and predict, generate, evaluate and refine real-world-related solutions. Students justify their decision-making and acknowledge the societal, economic and environmental sustainability of their engineered solutions. The problem-based learning framework in Engineering encourages students to become self-directed learners and develop beneficial collaboration and management skills.

students Engineering provides with an opportunity to experience, first-hand and in a practical way, the exciting and dynamic work of Students real-world engineers. learn transferrable 21st century skills that support their life aspirations, including critical thinking, creative thinking, communication, collaboration and teamwork, personal and social skills, and information & communication technologies (ICT) skills. The study of Engineering inspires students to become adaptable and resilient. They appreciate the engineer's ability to confidently and purposefully generate solutions that improve the quality of people's lives in an increasingly complex and dynamic technological world.

## Pathways

A course of study in Engineering can establish a basis for further education and employment in

the field of engineering, including, but not limited to, civil, mechanical, mechatronic, electrical, aerospace, mining, process, chemical, marine, biomedical, telecommunications, environmental, micro-nano and systems. The study of engineering will also benefit students wishing to pursue post-school tertiary pathways that lead to careers in architecture, project management, aviation, surveying and spatial sciences.

## **Objectives**

- recognise and describe engineering problems, concepts and principles
- symbolise and explain ideas and solutions
- analyse problems and information
- determine solution success criteria for engineering problems
- synthesise information and ideas to predict possible solutions
- generate prototype solutions to provide data to assess the accuracy of predictions
- evaluate and refine ideas and solutions to make justified recommendations
- make decisions about and use modeappropriate features, language and conventions for particular purposes and contexts.

Unit 1	Unit 2	Unit 3	Unit 4
Engineering fundamentals	Emerging technologies	Civil structures	Machines and mechanisms
<ul> <li>Engineering in society</li> <li>Engineering communication</li> <li>Introduction to engineering mechanics</li> </ul>	<ul> <li>Emerging needs in society</li> <li>Emerging processes, machinery and automation</li> <li>Emerging materials</li> </ul>	<ul> <li>Civil structures in society</li> <li>Civil structures and forces</li> <li>Civil engineering materials</li> </ul>	<ul> <li>Machines in society</li> <li>Machines, mechanisms and control</li> <li>Materials</li> </ul>
<ul> <li>Introduction to engineering materials</li> </ul>			

# Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Engineered solution	25%	Summative internal assessment 3 (IA3): • Engineered solution	25%
Summative internal assessment 2 (IA2): • Examination — combination response	25%	Summative external assessment (EA): • Examination — combination response	25%

The subject English focuses on the study of both literary texts and non-literary texts, developing students as independent, innovative and creative learners and thinkers who appreciate the aesthetic use of language, analyse perspectives and evidence, and challenge ideas and interpretations through the analysis and creation of varied texts.

Students have opportunities to engage with language and texts through a range of teaching and learning experiences to foster:

- skills to communicate effectively in Standard Australian English for the purposes of responding to and creating literary and nonliterary texts
- skills to make choices about generic structures, language, textual features and technologies for participating actively in literary analysis and the creation of texts in a range of modes, mediums and forms, for a variety of purposes and audiences
- enjoyment and appreciation of literary and nonliterary texts, the aesthetic use of language, and style
- creative thinking and imagination, by exploring how literary and non-literary texts shape perceptions of the world and enable us to enter the worlds of others
- critical exploration of ways in which literary and non-literary texts may reflect or challenge social and cultural ways of thinking and influence audiences
- empathy for others and appreciation of different perspectives through studying a range of literary and non-literary texts from diverse cultures and periods, including Australian texts by Aboriginal writers and/or Torres Strait Islander writers.

### **Pathways**

A course of study in English promotes openmindedness, imagination, critical awareness and intellectual flexibility — skills that prepare students for local and global citizenship, and for lifelong learning across a wide range of contexts.

### **Objectives**

- use patterns and conventions of genres to achieve particular purposes in cultural contexts and social situations
- establish and maintain roles of the writer/speaker/designer and relationships with audiences
- create and analyse perspectives and representations of concepts, identities, times and places
- make use of and analyse the ways cultural assumptions, attitudes, values and beliefs underpin texts and invite audiences to take up positions
- use aesthetic features and stylistic devices to achieve purposes and analyse their effects in texts
- select and synthesise subject matter to support perspectives
- organise and sequence subject matter to achieve particular purposes
- use cohesive devices to emphasise ideas and connect parts of texts
- make language choices for particular purposes and contexts
- use grammar and language structures for particular purposes
- use mode-appropriate features to achieve particular purposes.

Unit 1	Unit 2	Unit 3	Unit 4
Perspectives and texts	Texts and culture	Textual connections	Close study of literary texts
<ul> <li>Texts in contexts</li> <li>Language and textual analysis</li> </ul>	<ul><li>Texts in contexts</li><li>Language and textual analysis</li></ul>	<ul> <li>Conversations about issues in texts</li> <li>Conversations about concepts in texts</li> </ul>	<ul> <li>Creative responses to literary texts</li> <li>Critical responses to</li> </ul>
<ul> <li>Responding to and creating texts</li> </ul>	<ul> <li>Responding to and creating texts</li> </ul>	concepts in texts.	Critical responses to literary texts

## Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Spoken persuasive response	25%	Summative internal assessment 3 (IA3): • Examination — extended response	25%
Summative internal assessment 2 (IA2):	25%	Summative external assessment (EA): • Examination — extended response	25%

# **Essential English**

The subject Essential English develops and refines students' understanding of language, literature and literacy to enable them to interact confidently and effectively with others in everyday, community and social contexts. The subject encourages students to recognise language and texts as relevant in their lives now and in the future and enables them to understand, accept or challenge the values and attitudes in these texts.

Students have opportunities to engage with language and texts through a range of teaching and learning experiences to foster:

- skills to communicate confidently and effectively in Standard Australian English in a variety of contemporary contexts and social situations, including everyday, social, community, further education and workrelated contexts
- skills to choose generic structures, language, language features and technologies to best convey meaning
- skills to read for meaning and purpose, and to use, critique and appreciate a range of contemporary literary and non-literary texts
- effective use of language to produce texts for a variety of purposes and audiences
- creative and imaginative thinking to explore their own world and the worlds of others
- active and critical interaction with a range of texts, and an awareness of how language positions both them and others
- empathy for others and appreciation of different perspectives through a study of a range of texts from diverse cultures, including Australian texts by Aboriginal writers and/or Torres Strait Islander writers
- enjoyment of contemporary literary and nonliterary texts, including digital texts.

# **Pathways**

A course of study in Essential English promotes open-mindedness, imagination, critical awareness and intellectual flexibility — skills that prepare students for local and global citizenship, and for lifelong learning across a wide range of contexts.

## **Objectives**

- use patterns and conventions of genres to suit particular purposes and audiences
- use appropriate roles and relationships with audiences
- construct and explain representations of identities, places, events and/or concepts
- make use of and explain opinions and/or ideas in texts, according to purpose
- explain how language features and text structures shape meaning and invite particular responses
- select and use subject matter to support perspectives
- sequence subject matter and use modeappropriate cohesive devices to construct coherent texts
- make language choices according to register informed by purpose, audience and context
- use mode-appropriate language features to achieve particular purposes across modes.

Unit 1	Unit 2	Unit 3	Unit 4
Language that works	Texts and human experiences	Language that influences	Representations and popular culture texts
<ul><li>Responding to texts</li><li>Creating texts</li></ul>	<ul><li>Responding to texts</li><li>Creating texts</li></ul>	<ul> <li>Creating and shaping perspectives on community, local and global issues in texts</li> <li>Responding to texts that seek to influence audiences</li> </ul>	<ul> <li>Responding to popular culture texts</li> <li>Creating representations of Australian identifies, places, events and concepts</li> </ul>

### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. Schools develop three summative internal assessments and the common internal assessment (CIA) is developed by the QCAA.

Unit 3	Unit 4
Summative internal assessment 1 (IA1):	Summative internal assessment 3 (IA3):
• Spoken response	• Multimodal response
Summative internal assessment 2 (IA2):	Summative internal assessment (IA4):
• Common internal assessment (CIA)	

# **Essential Mathematics**

Mathematics is a unique and powerful intellectual discipline that is used to investigate patterns, order, generality and uncertainty. It is a way of thinking in which problems are explored and solved through observation, reflection and logical reasoning. It uses a concise system of communication, with written, symbolic, spoken and visual components. Mathematics is creative, requires initiative and promotes curiosity in an increasingly complex and data-driven world. It is the foundation of all quantitative disciplines.

To prepare students with the knowledge, skills and confidence to participate effectively in the community and the economy requires the development of skills that reflect the demands of the 21st century. Students undertaking Mathematics will develop their critical and creative thinking. oral and written communication, information & communication technologies (ICT) capability, ability to collaborate, and sense of personal and social responsibility — ultimately becoming lifelong learners who demonstrate initiative when facing a challenge. The use of technology to make connections between mathematical theory, practice and application has a positive effect on the development of conceptual understanding and student disposition towards mathematics.

Mathematics teaching and learning practices range from practising essential mathematical routines to develop procedural fluency, through to investigating scenarios, modelling the real world, solving problems and explaining reasoning. When students achieve procedural fluency, they carry out procedures flexibly, accurately and efficiently. When factual knowledge and concepts come to mind readily, students are able to make more complex use of knowledge to successfully formulate, represent and solve mathematical problems. Problemsolving helps to develop an ability to transfer mathematical skills and ideas between different contexts. This assists students to make connections between related concepts and adapt what they already know to new and unfamiliar situations. With appropriate effort and experience, through discussion, collaboration and reflection of ideas, students should develop confidence and experience success in their use of mathematics.

The major domains of mathematics in Essential Mathematics are Number, Data, Location and time, Measurement and Finance. Teaching and learning builds on the proficiency strands of the P–10 Australian Curriculum. Students develop their conceptual understanding when they undertake tasks that require them to connect mathematical concepts, operations and relations. They will learn to recognise definitions, rules and facts from everyday mathematics and data, and to calculate using appropriate mathematical processes.

Students will benefit from studies in Essential Mathematics because they will develop skills that go beyond the traditional ideas of numeracy. This is achieved through a greater emphasis on estimation, problem-solving and reasoning, which develops students into thinking citizens who interpret and use mathematics to make informed predictions and decisions about personal and financial priorities. Students will see mathematics as applicable to their employability and lifestyles, and develop leadership skills through self-direction and productive engagement in their learning. They will show curiosity and imagination, and appreciate the benefits of technology. Students will gain an appreciation that there is rarely one way of doing things and that real-world mathematics requires adaptability and flexibility.

## **Pathways**

A course of study in Essential Mathematics can establish a basis for further education and employment in the fields of trade, industry, business and community services. Students learn within a practical context related to general employment and successful participation in society, drawing on the mathematics used by various professional and industry groups.

# **Objectives**

- recall mathematical knowledge
- use mathematical knowledge
- communicate mathematical knowledge
- evaluate the reasonableness of solutions
- justify procedures and decisions
- solve mathematical problems.

Unit 1	Unit 2	Unit 3	Unit 4
Number, data and graphs	Data and travel	Measurement, scales and chance	Graphs, data and loans

## Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. Schools develop three summative internal assessments and the common internal assessment (CIA) is developed by the QCAA.

Unit 3	Unit 4
Summative internal assessment 1 (IA1):	Summative internal assessment 3 (IA3):
	Problem-solving and modelling task
Summative internal assessment 2 (IA2):	Summative internal assessment (IA4):
• Common internal assessment (CIA)	• Examination — short response

# Film, Television & New Media

Film, Television & New Media uses an inquiry learning model, developing critical thinking skills and creative capabilities through the exploration of five key concepts that operate in the contexts of production and use. The key concepts of technologies, representations, audiences, institutions and languages are drawn from a range of contemporary media theories and practices. Students will creatively apply film, television and new media key concepts to individually and collaboratively make movingimage media products, and will investigate and respond to moving-image media content and production contexts.

Film, television and new media are our primary sources of information and entertainment. They are important channels for educational and cultural exchange, and are fundamental to our self-expression and representation as individuals and as communities. Engaging meaningfully in local and global participatory media cultures enables us to understand and express ourselves. Through making and responding to movingimage media products, students will develop a respect for diverse perspectives and a critical awareness of the expressive, functional and creative potential of moving-image media in a diverse range of global contexts.

By studying Film, Television & New Media, students will develop knowledge and skills in creative thinking, communication, collaboration, planning, critical analysis, and digital and ethical citizenship. They will develop the necessary critical and creative skills to reflect on and appreciate Australian and global cultures and make sense of what they see and experience. Film, Television & New Media will equip students for a future of unimagined possibilities with highly transferable and flexible thinking and communication skills.

### **Pathways**

The processes and practices of Film, Television & New Media, such as project-based learning creative problem-solving, and develop transferable 21st century skills that are highly many areas of employment. valued in Organisations increasingly seek employees who demonstrate work-related creativity, innovative thinking and diversity. A course of study in Film, Television & New Media can establish a basis for further education and employment in the fields of film, television and media, and more broadly, in creative industries. cultural institutions, advertising, administration and management, communications, design, marketing, education, film and television, public relations, research, science and technology.

## **Objectives**

- design moving-image media products
- create moving-image media products
- resolve film, television and new media ideas, elements and processes
- apply literacy skills
- analyse moving-image media products
- evaluate film, television and new media products, practices and viewpoints.

Unit 1	Unit 2	Unit 3	Unit 4
Foundation	Stories	Participation	Artistry
<ul> <li>Technologies</li> </ul>	<ul> <li>Representations</li> </ul>	<ul> <li>Technologies</li> </ul>	Technologies
<ul> <li>Institutions</li> </ul>	Audiences	Audiences	<ul> <li>Representations</li> </ul>
<ul> <li>Languages</li> </ul>	<ul> <li>Languages</li> </ul>	<ul> <li>Institutions</li> </ul>	<ul> <li>Languages</li> </ul>

# Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Case study investigation	15%	Summative internal assessment 3 (IA3): • Stylistic production	35%
Summative internal assessment 2 (IA2):25%• Multi-platform content project			
Summative external assessment (EA): 25% • Examination — extended response			

# Food & Nutrition

Food & Nutrition is the study of food in the context of food science, nutrition and food technologies. Students explore the chemical and functional properties of nutrients to create food solutions that maintain the beneficial nutritive values. This knowledge is fundamental for continued development of a safe and sustainable food system that can produce high quality, nutritious solutions with an extended shelf life. The food system includes the sectors of production, processing, distribution, consumption, research and development. Waste management, sustainability and food protection are overarching principles that have an impact on all sectors of the food system. Students will actively engage in a food and nutrition problemsolving process to create food solutions that contribute positively to preferred personal, social, ethical, economic, environmental, legal, sustainable and technological futures.

Food & Nutrition is a developmental course of study. In Unit 1, students develop an understanding of the chemical and functional properties of vitamins, minerals and proteinbased food, as well as sensory profiling, food safety, spoilage and preservation. In Unit 2, students explore consumer food drivers, sensory profiling, labelling and food safety, and the development of food formulations. In Unit 3, students develop knowledge about the chemical, properties functional and sensory of carbohydrate- and fat-based food, and food safety, food preservation techniques and spoilage. In Unit 4, students focus on the investigation of problems for nutrition consumer markets and develop solutions for these while improving safety, nutrition, transparency and accessibility, as well as considering the wider impacts and implications of solutions.

Using a problem-solving process in Food and Nutrition, students learn to apply their food science, nutrition and technologies knowledge to solve real-world food and nutrition problems. Students learn to explore complex, open-ended problems and develop food and nutrition solutions. They recognise and describe problems, determine success criteria, develop and communicate ideas and generate, evaluate

# **General subject**

and refine real-world-related solutions. Students justify their decision-making and acknowledge the societal, economic and environmental sustainability of their food and nutrition solutions. The problem-based learning framework in Food and Nutrition encourages students to become self-directed learners and develop beneficial collaboration and management skills.

Food & Nutrition is inclusive of students' needs, interests and aspirations. It challenges students to think about, respond to, and create solutions for contemporary problems in food and nutrition. Students will become enterprising individuals and make discerning decisions about the safe development and use of technologies in the local and global fields of food and nutrition.

In Food & Nutrition, students learn transferable 21st century skills that support their aspirations, including critical thinking, creative thinking, communication, collaboration and teamwork, personal and social skills, and information & communication technologies (ICT) skills. Students become adaptable and resilient through their problem-solving learning experiences. These skills enable students to innovate and collaborate with people in the fields of science, technology, engineering and health to create solutions to contemporary problems in food and nutrition.

### Pathways

A course of study in Food & Nutrition can establish a basis for further education and employment in the fields of science, technology, engineering and health.

### **Objectives**

- recognise and describe food and nutrition facts and principles
- explain food and nutrition ideas and problems
- analyse problems, information and data
- determine success criteria
- synthesise information and data

- generate solutions to provide data to determine the feasibility of the solution
- evaluate and refine ideas and solutions to make justified recommendations for enhancement
- make decisions about and use modeappropriate features, language and conventions for particular purposes and contexts.

Unit 1	Unit 2	Unit 3	Unit 4
Food science of vitamins, minerals and protein	Food drivers and emerging trends	Food science of carbohydrate and fat	Food solution development for nutrition consumer
<ul> <li>Introduction to the food system</li> <li>Vitamins and minerals</li> <li>Protein</li> </ul>	<ul> <li>Consumer food drivers</li> <li>Sensory profiling</li> <li>Food safety and labelling</li> <li>Food formulation for consumers</li> </ul>	<ul><li>Carbohydrate</li><li>Fat</li></ul>	<ul> <li>Formulation and reformulation for nutrition consumer markets</li> <li>Nutrition consumer markets</li> </ul>

### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Examination — combination response	25%	Summative internal assessment 3 (IA3): • Food & Nutrition solution	25%
Summative internal assessment 2 (IA2): • Food & Nutrition solution	25%	Summative external assessment (EA): • Examination — combination response	25%

# **Furnishing Skills**

Technologies are an integral part of society as humans seek to create solutions to improve their own and others' quality of life. Technologies affect people and societies by transforming, restoring and sustaining the world in which we live. In an increasingly technological and complex world, it is important to develop the knowledge, understanding and skills associated with traditional and contemporary tools and materials used by Australian manufacturing produce industries to products. The manufacturing industry transforms raw materials into products wanted by society. This adds value for both enterprises and consumers. Australia has strong manufacturing industries that continue to provide employment opportunities.

Furnishing Skills includes the study of the manufacturing and furnishing industry's practices and production processes through students' application in, and through trade learning contexts. Industry practices are used by furnishing enterprises to manage the manufacture of products from raw materials. Production processes combine the production skills and procedures required to produce products. Students engage in applied learning to demonstrate knowledge and skills in units that meet local needs, available resources and teacher expertise. Through both individual and collaborative learning experiences, students learn to meet customer expectations of product quality at a specific price and time.

Applied learning in manufacturing tasks supports students' development of transferable 21st century, literacy and numeracy skills relevant to future employment opportunities in the domestic, commercial and bespoke furnishing industries. Students learn to recognise and apply industry practices, interpret drawings and technical information and demonstrate and apply safe

# Applied subject

practical production processes using hand/power tools and machinery. They communicate using oral, written and graphical modes, organise, calculate, plan, evaluate and adapt production processes and the products they produce. The majority of learning is done through manufacturing tasks that relate to business and industry. Students work with each other to solve problems and complete practical work.

### **Pathways**

A course of study in Furnishing Skills can establish a basis for further education and employment in the furnishing industry. With additional training and experience, potential employment opportunities may be found in furnishing trades as, for example, a furniture-maker, wood machinist, cabinetmaker, polisher, shopfitter, upholsterer, furniture restorer, picture framer, floor finisher or glazier.

## **Objectives**

- demonstrate practices, skills and procedures
- interpret drawings and technical information
- select practices, skills and procedures.
- sequence processes
- evaluate skills and procedures, and products
- adapt plans, skills and procedures.

Furnishing Skills is a four-unit course of study. This syllabus contains six QCAA-developed units as options for schools to select from to develop their course of study.

Unit option	Unit title
Unit option A	Furniture-making
Unit option B	Cabinet-making
Unit option C	Interior furnishing
Unit option D	Production in the domestic furniture industry
Unit option E	Production in the commercial furniture industry
Unit option F	Production in the bespoke furniture industry

# Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Furnishing Skills are:

Technique	Description	Response requirements
Practical demonstration	Students perform a practical demonstration when manufacturing a unit context artefact and reflect on industry practices, and production skills and procedures.	<ul> <li>Practical demonstration</li> <li>Practical demonstration: the skills and procedures used in 3–5 production processes</li> <li>Documentation</li> <li>Multimodal (at least two modes delivered at the same time): up to 3 minutes, 6 A4 pages, or equivalent digital media</li> </ul>
Project	Students manufacture a product and document the manufacturing process.	<ul> <li>Product</li> <li>Product: 1 unit-specific product manufactured using the skills and procedures in 5–7 production processes</li> <li>Manufacturing process</li> <li>Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media</li> </ul>

# **General Mathematics**

Mathematics is a unique and powerful intellectual discipline that is used to investigate patterns, order, generality and uncertainty. It is a way of thinking in which problems are explored and solved through observation, reflection and logical reasoning. It uses a concise system of communication, with written, symbolic, spoken and visual components. Mathematics is creative, requires initiative and promotes curiosity in an increasingly complex and data-driven world. It is the foundation of all quantitative disciplines.

To prepare students with the knowledge, skills and confidence to participate effectively in the community and the economy requires the development of skills that reflect the demands of century. Students the 21st undertaking Mathematics will develop their critical and creative thinking, oral and written communication, information & communication technologies (ICT) capability, ability to collaborate, and sense of personal and social responsibility - ultimately becoming lifelong learners who demonstrate initiative when facing a challenge. The use of technology to make connections between mathematical theory, practice and application has a positive effect on the development of conceptual understanding and student disposition towards mathematics.

Mathematics teaching and learning practices range from practising essential mathematical routines to develop procedural fluency, through to investigating scenarios, modelling the real world, solving problems and explaining reasoning. When students achieve procedural fluency, they carry out procedures flexibly, accurately and efficiently. When factual knowledge and concepts come to mind readily, students are able to make more complex use of knowledge to successfully formulate, represent and solve mathematical problems. Problem-solving helps to develop an ability to transfer mathematical skills and ideas between different contexts. This assists students to make connections between related concepts and adapt what they already know to new and unfamiliar situations. With appropriate effort and experience, through discussion, collaboration and reflection of ideas, students should develop confidence and experience success in their use of mathematics.

# General subject

The major domains of mathematics in General Mathematics are Number and algebra, Measurement and geometry, Statistics and Networks and matrices, building on the content of the P-10 Australian Curriculum. Learning reinforces prior knowledge and further develops key mathematical ideas, including rates and percentages, concepts from financial mathematics, linear and non-linear expressions, sequences, the use of matrices and networks to model and solve authentic problems, the use of trigonometry to find solutions to practical problems, and the exploration of real-world phenomena in statistics.

General Mathematics is designed for students who want to extend their mathematical skills beyond Year 10 but whose future studies or employment pathways do not require calculus. It incorporates a practical approach that equips learners for their needs as future citizens. Students will learn to ask appropriate questions. map out pathways, reason about complex solutions, set up models and communicate in different forms. They will experience the relevance of mathematics to their daily lives, communities and cultural backgrounds. They will develop the ability to understand, analyse and take action regarding social issues in their world. When students gain skill and self-assurance, when they understand the content and when they evaluate their success by using and transferring their knowledge, they develop a mathematical mindset.

## Pathways

A course of study in General Mathematics can establish a basis for further education and employment in the fields of business, commerce, education, finance, IT, social science and the arts.

# **Objectives**

By the conclusion of the course of study, students will:

- recall mathematical knowledge
- use mathematical knowledge
- communicate mathematical knowledge
- evaluate the reasonableness of solutions
- justify procedures and decisions
- solve mathematical problems.

### **Structure**

<ul><li>Summative external assessment (EA): 50%</li><li>Examination — combination response</li></ul>			

# Geography

Geography teaches us about the significance of 'place' and 'space' in understanding our world. These two concepts are foundational to the discipline, with the concepts of environment, interconnection, sustainability, scale and change building on this foundation. By observing and measuring spatial, environmental, economic, political, social and cultural factors, geography provides a way of thinking about contemporary challenges and opportunities.

Teaching and learning in Geography are underpinned by inquiry, through which students investigate places in Australia and across the globe. When students think geographically, they observe, gather, organise, analyse and present data and information across a range of scales.

Fieldwork is central to the study of Geography. It provides authentic opportunities for students to engage in real-world applications of geographical skills and thinking, including the collection and representation of data. Fieldwork also encourages participation in collaborative learning and engagement with the world in which students live.

Spatial technologies are also core components of contemporary geography. These technologies provide a real-world experience of Science, Technology, Engineering and Maths (STEM), allowing students to interact with particular geographic phenomena through dynamic, threedimensional representations that take the familiar form of maps. The skills of spatial visualisation, representation and analysis are highly valued in an increasingly digital and globalised world.

In Geography, students engage in a range of learning experiences that develop their geographical skills and thinking through the exploration of geographical challenges and their effects on people, places and the environment. Students are exposed to a variety of contemporary problems and challenges affecting people and places across the globe, at a range of scales. These challenges include responding to risk in hazard zones, planning sustainable places, managing land cover transformations and planning for population change.

This course of study enables students to appreciate and promote a more sustainable way of life. Through analysing and applying geographical knowledge, students develop an understanding of the complexities involved in sustainable planning and management practices. Geography aims to encourage students to become informed and adaptable so they develop the skills required to interpret global concerns and make genuine and creative contributions to society. It contributes to their development as global citizens who recognise the challenges of sustainability and the implications for their own and others' lives.

#### Pathways

A course of study in Geography can establish a basis for further education and employment in the fields of urban and environmental design, planning and management; biological and environmental science; conservation and land management; emergency response and hazard management; oceanography, surveying, global security, economics, business, law, engineering, architecture, information technology, and science.

#### **Objectives**

- explain geographical processes
- comprehend geographic patterns
- analyse geographical data and information
- apply geographical understanding
- propose action
- communicate geographical understanding using appropriate forms of geographical communication

Unit 1	Unit 2	Unit 3	Unit 4
Responding to risk and vulnerability in hazard zones	Planning sustainable places	Responding to land cover transformations	Managing population change
<ul> <li>Natural hazard zones</li> <li>Ecological hazard zones</li> </ul>	<ul> <li>Responding to challenges facing a place in Australia</li> <li>Managing challenges facing a megacity</li> </ul>	<ul> <li>Land cover transformations and climate change</li> <li>Responding to local land cover transformations</li> </ul>	<ul> <li>Population challenges in Australia</li> <li>Global population change</li> </ul>

## Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Examination — combination response	25%	Summative internal assessment 3 (IA3): • Data report	25%
Summative internal assessment 2 (IA2):	25%	Summative external assessment (EA):	25%

# Health

The Health syllabus provides students with a contextualised strengths-based inquiry of the various determinants that create and promote lifelong health, learning and active citizenship. Drawing from the health, behavioural, social and physical sciences, the Health syllabus offers students an action, advocacy and evaluation-oriented curriculum. Embedded in Health is the Health inquiry model that provides the conceptual framework for this syllabus.

The Health syllabus is developmental and becomes increasingly more complex across the four units through the use of the Health inquirv model. This syllabus is underpinned by a salutogenic (strengths-based) approach, which focuses on how health resources are accessed and enhanced. Resilience as a personal health resource in Unit 1, establishes key teaching and learning concepts, which build capacity for the depth of understanding over the course of study. Unit 2 focuses on the role and influence of peers and family as resources through one topic selected from two choices: Elective topic 1: Alcohol, or Elective topic 2: Body image. Unit 3 explores the role of the community in shaping resources through one topic selected from three choices: Elective topic 1: Homelessness, Elective topic 2: Transport safety, or Elective topic 3: Anxiety. The culminating unit challenges students to investigate and evaluate innovations that influence respectful relationships to help them navigate the post-schooling life course transition.

Health uses an inquiry approach informed by the critical analysis of health information to investigate sustainable health change at personal, peer, family and community levels. Students define and understand broad health topics, which they reframe into specific contextualised health issues for further investigation. Students plan, implement, evaluate and reflect on action strategies that mediate, enable and advocate change through health promotion.

Studying Health will highlight the value and dynamic nature of the discipline, alongside the purposeful processes and empathetic approach needed to enact change. The investigative skills required to understand complex issues and problems will enable interdisciplinary learning,

# General subject

and prepare students for further study and a diverse range of career pathways. The development of problem-solving and decisionmaking skills will serve to enable learning now and in the future.

The health industry is currently experiencing strong growth and is recognised as the largest industry for new employment in Australia, with continued expansion predicted due to ageing population trends. A demand for individualised health care services increases the need for health-educated people who can solve problems and contribute to improved health outcomes across the lifespan at individual, family, local, national and global levels. The preventive health agenda is future-focused to develop 21st century skills, empowering students to be critical and creative thinkers, with strong communication and collaboration skills equipped with a range of personal, social and ICT skills.

## **Pathways**

A course of study in Health can establish a basis for further education and employment in the fields of health science, public health, health education, allied health, nursing and medical professions.

# **Objectives**

- recognise and describe information about health-related topics and issues
- comprehend and use the Health inquiry model
- analyse and interpret information to draw conclusions about health-related topics and issues
- critique information to distinguish determinants that influence health status
- investigate and synthesise information to develop action strategies
- evaluate and reflect on implemented action strategies to justify recommendations that mediate, advocate and enable health promotion
- organise information for particular purposes
- make decisions about and use modeappropriate features, language and conventions for particular purposes and contexts.

Unit 1	Unit 2	Unit 3	Unit 4
Resilience as a personal health resource	Peers and family as resources for healthy living	Community as a resource for healthy living	Respectful relationships in the post-schooling transition
	<ul> <li>Alcohol and other drugs (elective)</li> <li>Body image (elective)</li> </ul>	<ul> <li>Homelessness (elective)</li> <li>Transport safety (elective)</li> <li>Anxiety (elective)</li> </ul>	

# Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Action research	25%	Summative internal assessment 3 (IA3): • Investigation	25%
Summative internal assessment 2 (IA2): • Examination — extended response	25%	Summative external assessment (EA): • Examination — extended response	25%

# **Industrial Graphics Skills**

Technologies are an integral part of society as humans seek to create solutions to improve their own and others' quality of life. Technologies affect people and societies by transforming, restoring and sustaining the world in which we live. In an increasingly technological and complex world, it is important to develop the knowledge. understanding and skills used by Australian manufacturing and construction industries to produce products. The manufacturing and construction industries transform raw materials into products required by society. This adds value for both enterprises and consumers. Australia has strong manufacturing and construction industries continue to provide that employment opportunities.

Industrial Graphics Skills includes the study of industry practices and drawing production processes through students' application in, and through a variety of industry-related learning contexts. Industry practices are used by enterprises to manage drawing production processes and the associated manufacture or construction of products from raw materials. Drawing production processes include the drawing skills and procedures required to produce industry-specific technical drawings and graphical representations. Students engage in applied learning to demonstrate knowledge and skills in units that meet local needs, available resources and teacher expertise. Through both individual and collaborative learning experiences, students learn to meet client expectations of drawing standards.

Applied learning supports students' development of transferable 21st century, literacy and numeracy skills relevant to future employment opportunities in the building and construction,

# Applied subject

engineering and furnishing industrial sectors. Students learn to interpret drawings and technical information, and select and demonstrate manual and computerised drawing skills and procedures. The majority of learning is done through drafting tasks that relate to business and industry. They work with each other to solve problems and complete practical work.

## **Pathways**

A course of study in Industrial Graphics Skills can establish a basis for further education and employment in a range of roles and trades in the manufacturing industries. With additional training and experience, potential employment opportunities may be found in drafting roles such as architectural drafter, estimator, mechanical drafter, electrical drafter, structural drafter, civil drafter and survey drafter.

# **Objectives**

- demonstrate practices, skills and procedures
- interpret client briefs and technical information
- select practices, skills and procedures
- sequence processes
- evaluate skills and procedures, and products
- adapt plans, skills and products.

Industrial Graphics Skills is a four-unit course of study. This syllabus contains six QCAA-developed units as options for schools to select from to develop their course of study.

Unit option	Unit title
Unit option A	Drafting for residential building
Unit option B	Computer-aided manufacturing drafting
Unit option C	Computer-aided drafting — modelling
Unit option D	Graphics for the construction industry
Unit option E	Graphics for the engineering industry
Unit option F	Graphics for the furnishing industry

## Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Industrial Graphics Skills are:

Technique	Description	Response requirements
Practical demonstration	Students perform a practical demonstration of drafting and reflect on industry practices, skills and drawing procedures.	<ul> <li>Practical demonstration of drafting</li> <li>Drawings: the drafting skills and procedures used in 3–5 production processes</li> <li>Documentation</li> <li>Multimodal (at least two modes delivered at the same time): up to 3 minutes, 6 A4 pages, or equivalent digital media</li> </ul>
Project	Students draft in response to a provided client brief and technical information.	<ul> <li>Unit-specific product</li> <li>Drawings: drawings drafted using the skills and procedures in 5–7 production processes</li> <li>Drawing process</li> <li>Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media</li> </ul>

# Information & Communication Technology

Technologies are an integral part of society as humans seek to create solutions to improve their own and others' quality of life. Technologies affect people and societies by transforming, restoring and sustaining the world in which we live. In an increasingly technological and complex world, is it important to develop the knowledge, understanding and skills associated with information technology to support a growing need for digital literacy and specialist information and communication technology skills in the workforce. Across business, industry, government, education and leisure sectors, rapidly changing industry practices and processes create corresponding vocational opportunities in Australia and around the world.

Information & Communication Technology includes the study of industry practices and ICT processes through students' application in and through a variety of industry-related learning contexts. Industry practices are used by enterprises to manage ICT product development processes to ensure highquality outcomes, with alignment to relevant local and universal standards and requirements. Students engage in applied learning to demonstrate knowledge, understanding and skills in units that meet local needs, available resources and teacher expertise. Through both individual and collaborative learning experiences, students learn to meet client expectations and product specifications.

Applied learning supports students' development of transferable 21st century, literacy and numeracy skills relevant to information and communication technology sectors and future employment opportunities. Students learn to interpret client briefs and technical information, and select and demonstrate skills using hardware and software to develop ICT products. The majority of learning is done through prototyping tasks that relate to business and industry, and that promote adaptable, competent, self-motivated and safe individuals who can work with colleagues to solve problems and complete practical work.

### **Pathways**

A course of study in Information & Communication Technology can establish a basis for further education and employment in many fields, especially the fields of ICT operations, help desk, sales support, digital media support, office administration, records and data management, and call centres.

### **Objectives**

- demonstrate practices, skills and processes
- interpret client briefs and technical information
- select practices and processes
- sequence processes
- evaluate processes and products
- adapt processes and products.

Information & Communication Technology is a four-unit course of study. This syllabus contains six QCAAdeveloped units as options for schools to select from to develop their course of study.

Unit option	Unit title
Unit option A	Robotics
Unit option B	App development
Unit option C	Audio and video production
Unit option D	Layout and publishing
Unit option E	Digital imaging and modelling
Unit option F	Web development

## Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Information & Communication Technology are:

Technique	Description	Response requirements
Product proposal	Students produce a prototype for a product proposal in response to a client brief and technical information.	Multimodal (at least two modes delivered at the same time): up to 3 minutes, 6 A4 pages, or equivalent digital media
Project	Students produce a product prototype in response to a client brief and technical information.	Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media that includes a demonstration of the product prototype

# Japanese

The need to communicate is the foundation for all language development. People use language to achieve their personal communicative needs — to express, exchange, interpret and negotiate meaning, and to understand the world around them. The central goal for additional language acquisition is communication. Students do not simply learn a language — they participate in a range of interactions in which they exchange meaning and become active participants in understanding and constructing written, spoken and visual texts.

Additional language acquisition provides students with opportunities to reflect on their understanding of a language and the communities that use it, while also assisting in the effective negotiation of experiences and meaning across cultures and languages. Communicating with people from Japanese-speaking communities provides insight into the purpose and nature of language and promotes greater sensitivity to, and understanding of, linguistic structures, including the linguistic structures of English. As students develop the ability to explore cultural diversity and similarities between another language and their own, this engagement with other languages and cultures fosters intercultural understanding.

Language acquisition occurs in social and cultural settings. It involves communicating across a range of contexts for a variety of purposes, in a manner appropriate to context. As students experience and evaluate a range of different text types, they reorganise their thinking to accommodate other linguistic and intercultural knowledge and textual conventions. This informs their capacity to create texts for a range of contexts, purposes and audiences.

Central to the capacity to evaluate and create texts are the skills of critical and creative thinking, intellectual flexibility and problem-solving. Acquiring an additional language provides the opportunity to develop these interrelated skills, and requires students to use language in a meaningful way through the exchange of information, ideas and perspectives relevant to their life experiences.

For exchanges to be relevant and useful, additional language acquisition must position students at the centre of their own learning. When students communicate their own aspirations, values, opinions, ideas and relationships, the

# **General subject**

personalisation of each student's learning creates a stronger connection with the language. Activities and tasks are developed to fit within the student's life experience.

The ability to communicate in an additional language such as Japanese is an important 21st century skill. Students develop knowledge, understanding and skills that enable successful participation in a global society. Communication in an additional language expands students' horizons and opportunities as national and global citizens.

Additional language acquisition contributes to and enriches intellectual, educational, linguistic, metacognitive, personal, social and cultural development. It requires intellectual discipline and systematic approaches to learning, which are characterised by effective planning and organisation, incorporating processes of selfmanagement and self-monitoring.

### Pathways

A course of study in Japanese can establish a basis for further education and employment in many professions and industries, particularly those where the knowledge of an additional language and the intercultural understanding it encompasses could be of value, such as business, hospitality, law, science, technology, sociology and education.

### **Objectives**

By the conclusion of the course of study, students will:

- comprehend Japanese to understand information, ideas, opinions and experiences
- identify tone, purpose, context and audience to infer meaning
- analyse and evaluate information and ideas to draw conclusions

apply knowledge of language elements of Japanese to construct meaning structure, sequence and synthesise information to justify opinions and perspectives

• communicate using contextually appropriate Japanese.

		<ul> <li>Groups in society</li> </ul>	

# Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete four summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A-E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Examination — short response	20%	Summative internal assessment 3 (IA3): • Multimodal presentation and interview	30%
Summative internal assessment 2 (IA2): • Examination — extended response	25%	Summative external assessment (EA): • Examination — combination response	25%

# Legal Studies

Legal Studies focuses on the interaction between society and the discipline of law. Students study the legal system and how it regulates activities and aims to protect the rights of individuals, while these with obligations balancing and responsibilities. An understanding of legal processes and concepts enables citizens to be better informed and able to constructively question and contribute to the improvement of laws and legal processes. This is important as the law is dynamic and evolving, based on values, customs and norms that are challenged by technology, society and global influences.

Legal Studies explores the role and development of law in response to current issues. The subject starts with the foundations of law and explores the criminal justice process through to punishment and sentencing. Students then study the civil justice system, focusing on contract law and negligence. With increasing complexity, students critically examine issues of governance that are the foundation of the Australian and Queensland legal systems, before they explore contemporary issues of law reform and change. The study finishes with considering Australian international human rights and issues. Throughout the course, students analyse issues and evaluate how the rule of law, justice and equity can be achieved in contemporary contexts.

The primary skills of inquiry, critical thinking, problem-solving and reasoning empower Legal Studies students to make informed and decisions recommendations. ethical and Learning is based on an inquiry approach that develops reflection skills and metacognitive awareness. Through inquiry, students identify and describe legal issues, explore information and data, analyse, evaluate to propose recommendations, and create responses that convey legal meaning. They improve their research skills by using information and communication technology (ICT) and databases to access research, commentary, case law and legislation. Students analyse legal information to determine the nature and scope of the legal issue and examine different or opposing views, which are evaluated against legal criteria. These are critical skills that allow students to think strategically in the 21st century.

# **General subject**

Knowledge of the law enables students to have confidence in approaching and accessing the legal system and provides them with an appreciation of the influences that shape the system. Legal knowledge empowers students to make constructive judgments on. and knowledgeable commentaries about, the law and its processes. Students examine and justify viewpoints involved in legal issues, while also developing respect for diversity. Legal Studies satisfies interest and curiosity as students question, explore and discuss tensions between changing social values, justice and equitable outcomes.

Legal Studies enables students to appreciate how the legal system is relevant to them and their communities. The subject enhances students' abilities to contribute in an informed and considered way to legal challenges and change, both in Australia and globally.

## **Pathways**

A course of study in Legal Studies can establish a basis for further education and employment in the fields of law, law enforcement, criminology, justice studies and politics. The knowledge, skills and attitudes students gain are transferable to all discipline areas and post-schooling tertiary pathways. The research and analytical skills this course develops are universally valued in business, health, science and engineering industries.

# **Objectives**

- comprehend legal concepts, principles and processes
- select legal information from sources
- analyse legal issues
- evaluate legal situations
- create responses that communicate meaning to suit the intended purpose.

# Literature

# **General subject**

The subject Literature focuses on the study of literary texts, developing students as independent, innovative and creative learners and thinkers who appreciate the aesthetic use of language, analyse perspectives and evidence, and challenge ideas and interpretations through the analysis and creation of varied literary texts.

Students have opportunities to engage with language and texts through a range of teaching and learning experiences to foster:

- skills to communicate effectively in Standard Australian English for the purposes of responding to and creating literary texts
- skills to make choices about generic structures, language, textual features and technologies to participate actively in the dialogue and detail of literary analysis and the creation of imaginative and analytical texts in a range of modes, mediums and forms
- enjoyment and appreciation of literary texts and the aesthetic use of language, and style
- creative thinking and imagination by exploring how literary texts shape perceptions of the world and enable us to enter the worlds of others
- critical exploration of ways in which literary texts may reflect or challenge social and cultural ways of thinking and influence audiences
- empathy for others and appreciation of different perspectives through studying a range of literary texts from diverse cultures and periods, including Australian texts by Aboriginal writers and/or Torres Strait Islander writers.

### **Pathways**

A course of study in Literature promotes open-mindedness, imagination, critical awareness and intellectual flexibility — skills that prepare students for local and global citizenship, and for lifelong learning across a wide range of contexts.

### **Objectives**

- use patterns and conventions of genres to achieve particular purposes in cultural contexts and social situations
- establish and maintain roles of the writer/speaker/designer and relationships with audiences
- create and analyse perspectives and representations of concepts, identities, times and places
- make use of and analyse the ways cultural assumptions, attitudes, values and beliefs underpin texts and invite audiences to take up positions
- use aesthetic features and stylistic devices to achieve purposes and analyse their effects in texts
- select and synthesise subject matter to support perspectives
- organise and sequence subject matter to achieve particular purposes
- use cohesive devices to emphasise ideas and connect parts of texts
- make language choices for particular purposes and contexts
- use grammar and language structures for particular purposes
- use mode-appropriate features to achieve particular purposes.

# **Mathematical Methods**

Mathematics is a unique and powerful intellectual discipline that is used to investigate patterns, order, generality and uncertainty. It is a way of thinking in which problems are explored and solved through observation, reflection and logical reasoning. It uses a concise system of communication, with written, symbolic, spoken and visual components. Mathematics is creative, requires initiative and promotes curiosity in an increasingly complex and data-driven world. It is

the foundation of all quantitative disciplines.

To prepare students with the knowledge, skills and confidence to participate effectively in the community and the economy requires the development of skills that reflect the demands of 21st centurv. Students undertaking the Mathematics will develop their critical and creative thinking, oral and written communication, information & communication technologies (ICT) capability, ability to collaborate, and sense of personal and social responsibility - ultimately becoming lifelong learners who demonstrate initiative when facing a challenge. The use of technology to make connections between mathematical theory, practice and application has a positive effect on the development of conceptual understanding and student disposition towards mathematics.

Mathematics teaching and learning practices range from practising essential mathematical routines to develop procedural fluency, through to investigating scenarios, modelling the real world, solving problems and explaining reasoning. When students achieve procedural fluency, they carry out procedures flexibly, accurately and efficiently. When factual knowledge and concepts come to mind readily, students are able to make more complex use of knowledge to successfully formulate, represent and solve mathematical problems. Problem-solving helps to develop an ability to transfer mathematical skills and ideas between different contexts. This assists students to make connections between related concepts and adapt what they already know to new and unfamiliar situations. With appropriate effort and experience, through discussion, collaboration and reflection of ideas, students should develop confidence and experience success in their use of mathematics.

The major domains of mathematics in Mathematical Methods are Algebra, Functions, relations and their graphs, Calculus and Statistics. Topics are developed systematically, with increasing levels of sophistication, complexity and connection, and build on algebra, functions and

# **General subject**

their graphs, and probability from the P–10 Australian Curriculum. Calculus is essential for developing an understanding of the physical world. The domain Statistics is used to describe and analyse phenomena involving uncertainty and variation. Both are the basis for developing effective models of the world and solving complex and abstract mathematical problems. The ability to translate written, numerical, algebraic, symbolic and graphical information from one representation to another is a vital part of learning in Mathematical Methods.

Students who undertake Mathematical Methods will see the connections between mathematics and other areas of the curriculum and apply their mathematical skills to real-world problems, becoming critical thinkers, innovators and problem-solvers. Through solving problems and developing models, they will appreciate that mathematics and statistics are dynamic tools that are critically important in the 21st century.

#### **Pathways**

A course of study in Mathematical Methods can establish a basis for further education and employment in the fields of natural and physical sciences (especially physics and chemistry), mathematics and science education, medical and health sciences (including human biology, biomedical science, nanoscience and forensics), engineering (including chemical, civil, electrical and mechanical engineering, avionics, communications and mining), computer science (including electronics and software design), psychology and business.

#### **Objectives**

- recall mathematical knowledge
- use mathematical knowledge
- communicate mathematical knowledge
- evaluate the reasonableness of solutions
- justify procedures and decisions
- solve mathematical problems.

Unit 1	Unit 2	Unit 3	Unit 4
Surds, algebra, functions and probability	Calculus and further functions	Further calculus and introduction to statistics	Further calculus, trigonometry and statistics

# Media Arts in Practice

The arts are woven into the fabric of community. They have the capacity to engage and inspire students, enriching their lives, stimulating curiosity and imagination, and encouraging them to reach their creative and expressive potential. Arts subjects provide opportunities for students to learn problem-solving processes, design and create art, and use multiple literacies to communicate intention with diverse audiences.

Media arts refers to art-making and artworks composed and transmitted through film, television, radio, print, gaming and web-based media. Students explore the role of the media in reflecting and shaping society's values, attitudes and beliefs. They learn to be ethical and responsible users and creators of digital technologies and to be aware of the social, environmental and legal impacts of their actions and practices.

When responding, students use analytical processes to identify individual, community or global problems and develop plans and designs for media artworks. They use reasoning and decision-making to justify their choices, reflecting and evaluating on the success of their own and others' art-making. When making, students demonstrate knowledge and understanding of media arts practices to communicate artistic intention. They gain an appreciation of how media artworks connect ideas and purposes with audiences. Students develop competency with and independent

selection of modes, media technologies and media techniques as they make design products and media artworks, synthesising ideas developed through the responding phase.

#### Pathways

Media Arts in Practice students develop the necessary knowledge, understanding and skills required for emerging careers in a dynamic and creative field that is constantly adapting to new technologies. Learning is connected to relevant arts industry practice and opportunities, promoting future employment and preparing students as agile, competent, innovative and safe arts workers, who can work collaboratively to solve problems and complete project-based work.

A course of study in Media Arts in Practice can establish a basis for further education and employment in a dynamic, creative and global media industry that is constantly adapting to new technologies, as well as more broadly in fields such as education, marketing, humanities, recreation, health and science.

#### **Objectives**

By the conclusion of the course of study, students should:

- use media arts practices
- plan media artworks
- communicate ideas
- evaluate media artworks.

#### Structure

Media Arts in Practice is a four-unit course of study. This syllabus contains four QCAA-developed units as options for schools to combine in any order to develop their course of study.

Unit option	Unit title
Unit option A	Personal viewpoints
Unit option B	Representations
Unit option C	Community
Unit option D	Persuasion

# Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Media Arts in Practice are:

Technique	Description	Response requirements
Project	Students make and evaluate a design product and plan a media artwork that reflects a purpose and context relevant to the unit.	<ul> <li>Design product</li> <li>Design product must represent:</li> <li>Variable requirements, dependent on selected pre- production format and the length or requirements of the media artwork (see response requirements for 'Media artwork' below).</li> </ul>
		Planning and evaluation of design product One of the following:
		<ul> <li>Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media</li> </ul>
		Written: up to 600 words
		• Spoken: up to 4 minutes, or signed equivalent
Media artwork	Students implement the design product from the project to	<b>Media artwork</b> One of the following:
	to the unit.	Audio: up to 3 minutes
		Moving image: up to 3 minutes
		Still image: up to 4 media artwork/s

# **Modern History**

Modern History is a discipline-based subject where students examine traces of humanity's recent past so they may form their own views about the Modern World since 1750. Through Modern History, students' curiosity and imagination is invigorated while their appreciation of civilisation is broadened and deepened. Students consider different perspectives and learn that interpretations and explanations of events and developments in the past are contestable and tentative. Modern History distinguishes itself from other subjects by enabling students to empathise with others and make meaningful connections between what existed previously, and the world being lived in today — all of which may help build a better tomorrow.

Modern History has two main aims. First, Modern History seeks to have students gain historical knowledge and understanding about some of the main forces that have contributed to the development of the Modern World. Second, Modern History aims to have students engage in historical thinking and form historical а consciousness in relation to these same forces. Both aims complement and build on the learning covered in the Australian Curriculum: History 7–10. The first aim is achieved through the thematic organisation of Modern History around four of the forces that have helped to shape the Modern World - ideas, movements, national experiences and international experiences. In each unit, students explore the nature, origins, development, legacies and contemporary significance of the force being examined. The second aim is achieved through the rigorous application of historical concepts and historical skills across the syllabus. To fulfil both aims, engagement with a historical inquiry process is integral and results in students devising historical questions and conducting research, analysing, and synthesising evidence evaluating from historical sources, and communicating the outcomes of their historical thinking.

### **General subject**

Modern History benefits students as it enables them to thrive in a dynamic, globalised and knowledge-based world. Through Modern History, students acquire an intellectual toolkit consisting of literacy, numeracy and 21st century skills. This ensures students of Modern History gain a range of transferable skills that will help them forge their own pathways to personal and professional success, as well as become empathetic and critically literate citizens who are equipped to embrace a multicultural, pluralistic, inclusive, democratic, compassionate and sustainable future.

#### **Pathways**

A course of study in Modern History can establish a basis for further education and employment in the fields of history, education, psychology, sociology, law, business, economics, politics, journalism, the media, writing, academia and strategic analysis.

#### **Objectives**

- devise historical questions and conduct research
- comprehend terms, concepts and issues
- analyse evidence from historical sources
- · evaluate evidence from historical sources
- synthesise evidence from historical sources
- communicate to suit purpose.

Unit 1	Unit 2	Unit 3	Unit 4
ldeas in the Modern World	Movements in the Modern World	National experiences in the Modern World	International experiences in the Modern World

Schools select one of the topic options that has been nominated by the QCAA for the external assessment and has not been studied in Topic 1. Schools will be notified of the topic options at least two years before the external assessment is implemented.

## Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Examination — extended response	25%	Summative internal assessment 3 (IA3): • Investigation	25%
Summative internal assessment 2 (IA2): • Investigation	25%	Summative external assessment (EA): • Examination — short response	25%

# Music

Music is a unique art form that uses sound and silence as a means of personal expression. It allows for the expression of the intellect, imagination and emotion and the exploration of values. Music occupies a significant place in everyday life of all cultures and societies, serving social, cultural, celebratory, political and educational roles.

The study of music combines the development of cognitive, psychomotor and affective domains through making and responding to music. The development of musicianship through making (composition and performance) and responding (musicology) is at the centre of the study of music.

Through composition, students use music elements and concepts, applying their knowledge and understanding of compositional devices to create new music works. Students resolve music ideas to convey meaning and/or emotion to an audience.

Through performance, students sing and play music, demonstrating their practical music skills through refining solo and/or ensemble performances. Students realise music ideas through the demonstration and interpretation of music elements and concepts to convey meaning and/or emotion to an audience.

In musicology, students analyse the use of music elements and concepts in a variety of contexts, styles and genres. They evaluate music through the synthesis of analytical information to justify a viewpoint.

In an age of change, Music has the means to prepare students for a future of unimagined possibilities; in Music, students develop highly transferable skills and the capacity for flexible thinking and doing. Literacy in Music is an essential skill for both musician and audience, and learning in Music prepares students to engage in a multimodal world. The study of Music provides students with opportunities for intellectual and personal growth, and to make a contribution to the culture of their community. Students develop the

# **General subject**

capacity for working independently and collaboratively, reflecting authentic practices of music performers, composers and audiences.

#### Pathways

A course of study in Music can establish a basis for further education and employment in the field of music, and more broadly, in creative industries, cultural institutions, administration and management, health, communications, education, public relations, research, science and technology. As more organisations value workrelated creativity and diversity, the processes and practices of Music develop 21st century skills essential for many areas of employment. Specifically, the study of Music helps students develop creative and critical thinking, collaboration and communication skills, personal and social skills, and digital literacy - all of which is sought after in modern workplaces.

### **Objectives**

- demonstrate technical skills
- use music elements and concepts
- analyse music
- apply compositional devices
- apply literacy skills
- interpret music elements and concepts
- evaluate music
- realise music ideas
- resolve music ideas.

Unit 1	Unit 2	Unit 3	Unit 4
Designs	Identities	Innovations	Narratives
Through inquiry learning, the following is explored:	Through inquiry learning, the following is explored:	Through inquiry learning, the following is explored:	Through inquiry learning, the following is explored:
How does the treatment and combination of different music elements enable musicians to design music that communicates meaning through performance and composition?	How do musicians use their understanding of music elements, concepts and practices to communicate cultural, political, social and personal identities when performing, composing and responding to music?	How do musicians incorporate innovative music practices to communicate meaning when performing and composing?	How do musicians manipulate music elements to communicate narrative when performing, composing and responding to music?

### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1):20%• Performance		Summative internal assessment 3 (IA3): • Project	35%
Summative internal assessment 2 (IA2):20%• Composition20%			
Summative external assessment (EA): 25% <ul> <li>Examination — extended response</li> </ul>			

# **Music Extension**

# General subject

The Music Extension syllabus should be read in conjunction with the Music syllabus. In Music Extension, students follow an individual program of study designed to continue the development of refined musicianship skills. Music Extension encourages students to investigate music concepts and ideas relevant to their specialisation.

In the **Composition specialisation** (making), students create and resolve new music works. They demonstrate use of music concepts and manipulate music concepts to express meaning and/or emotion to an audience through resolved compositions.

In the **Musicology specialisation** (responding), students investigate and analyse music works and ideas. They synthesise analytical information about music, and document sources and references about music to support research.

In the **Performance specialisation** (making), students realise music works, demonstrating technical skills and understanding. They make decisions about music, interpret music elements and concepts, and realise music ideas in their performances.

Music Extension prepares students for a future of unimagined possibilities, helping them to become self-motivated and emotionally aware. As a unique means of expression, music makes a profound contribution to personal, social and cultural identities. Students develop transversal skills, becoming adaptable and innovative problem-solvers and collaborative team members who make informed decisions. As enquirers, students develop their ability to analyse and critically evaluate. Literacy in Music Extension is an essential skill for composers, musicologists and performers, and learning in Music Extension prepares students to engage in a multimodal world.

#### **Pathways**

A course of study in Music Extension can establish a basis for further education and employment in the field of music, and more broadly, in creative industries, cultural institutions, administration and management, health, communications, education, public relations, research, science and technology.

### **Objectives**

#### **Common objectives**

By the conclusion of the course of study, **all** students will:

- analyse music
- apply literacy skills
- evaluate music.

#### **Specialist objectives**

By the conclusion of the course of study, in addition to the common objectives, students who specialise in **composition** will also:

- apply compositional devices
- manipulate music elements and concepts
- resolve music ideas.

By the conclusion of the course of study, in addition to the common objectives, students who specialise in **musicology** will also:

- express meaning or ideas about music
- investigate music and ideas about music
- synthesise information.

By the conclusion of the course of study, in addition to the common objectives, students who specialise in **performance** will also:

- apply technical skills
- interpret music elements and concepts
- realise music ideas.

Unit 3	Unit 4
Explore	Emerge

# **Music in Practice**

The arts are woven into the fabric of community. They have the capacity to engage and inspire students, enriching their lives, stimulating curiosity and imagination, and encouraging them to reach their creative and expressive potential. Arts subjects provide opportunities for students to learn problem-solving processes, design and create art, and use multiple literacies to communicate intention with diverse audiences.

Music is a unique aural art form that uses sound and silence as a means of personal expression. It is a powerful medium because it affects a wide range of human activities, including personal, social, cultural and entertainment pursuits. Making music, becoming part of music and arts communities, and interacting with practising musicians and artists nurtures students' creative thinking and problem-solving skills as they follow processes from conception to realisation and express music ideas of personal significance.

In Music in Practice, students are involved in making (composing and performing) and responding by exploring and engaging with music practices in class, school and the community. They gain practical, technical and listening skills and make choices to communicate through their music. Through music activities, students have opportunities to engage individually and in groups to express music ideas that serve purposes and contexts. This fosters creativity, helps students develop problem-solving skills, and heightens their imaginative, emotional, aesthetic, analytical and reflective experiences.

Students learn about workplace health and safety issues relevant to the music industry and effective work practices that foster a positive work ethic, the ability to work as part of a team, and

# **Applied subject**

project management skills. They are exposed to authentic music practices that reflect the realworld practices of composers, performers, and audiences. They learn to view the world from different perspectives, experiment with different ways of sharing ideas and feelings, gain confidence and self-esteem, and contribute to the social and cultural lives of their school and local community.

#### **Pathways**

The discipline and commitment required in music-making provides students with opportunities for personal growth and development of lifelong learning skills. Learning in Music in Practice is connected to relevant industry practice and opportunities, promoting future employment and preparing students as agile, competent, innovative and safe workers, who can work collaboratively to solve problems and complete project-based work in various contexts.

A course of study in Music in Practice can establish a basis for further education and employment across a range of fields such as creative industries, education, venue and event management, advertising, communications, humanities, health, sciences and technology.

#### **Objectives**

- use music practices
- plan music works
- communicate ideas
- evaluate music works.

Music in Practice is a four-unit course of study. This syllabus contains four QCAA-developed units as options for schools to combine in any order to develop their course of study.

Unit option	Unit title
Unit option A	Music of today
Unit option B	The cutting edge
Unit option C	Building your brand
Unit option D	'Live' on stage!

#### Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Music in Practice are:

Technique	Description	Response requirements
Composition	Students make a composition that is relevant to the purpose and context of the unit.	<b>Composition</b> Composition: up to 3 minutes, or equivalent section of a larger work
Performance	Students perform music that is relevant to the unit focus.	<b>Performance</b> Performance (live or recorded): up to 4 minutes
Project	Students plan, make and evaluate a composition or performance relevant to the unit focus.	<b>Composition</b> Composition: up to 3 minutes, or equivalent section of a larger work OR
		<b>Performance</b> Performance (live or recorded): up to 4 minutes
		AND <b>Planning and evaluation of composition or</b> <b>performance</b> One of the following:
		• Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media
		Written: up to 600 words
		• Spoken: up to 4 minutes, or signed equivalent

# Philosophy & Reason

Philosophy & Reason combines the discipline of philosophy with the associated methodology of critical reasoning and logic. The study of philosophy allows students to recognise the relevance of various philosophies to different political, ethical, religious and scientific positions. It also allows them to realise that decisions in these areas are the result of the acceptance of certain ideas and specific modes of reasoning. In addition, critical reasoning and logic provide knowledge, skills and understanding so students are able to engage with, examine and analyse classical and contemporary ideas and issues. The study of philosophy enables students to make rational arguments, espouse viewpoints and engage in informed discourse. In Philosophy & Reason, students learn to understand and use reasoning to develop coherent world-views and to reflect upon the nature of their own decisions as well as their responses to the views of others.

Through the study of Philosophy & Reason, students collaboratively investigate philosophical ideas that have shaped and continue to influence contemporary society. These ideas include what it means to be human, how we understand the role of reason in our individual and collective lives and how we think about and care for each other and the world around us.

Students analyse arguments from a variety of sources and contexts as they develop an understanding of what constitutes effective reasoning. They formalise arguments and choose appropriate techniques of reasoning to attempt to solve problems. The collaborative nature of philosophical inquiry is an essential component for students to understand and develop norms of effective thinking and to value and seek a range of ideas beyond their own.

# **General subject**

A course of study in Philosophy & Reason specifically focuses on the development of transferable thinking skills such as analysis, evaluation and justification, and an appreciation of the values of inquiry such as clarity, accuracy, precision and coherence; students are thus well prepared for post-school participation in a wide range of fields. Students learn to value plurality in terms of perspectives and world-views as a necessary condition for human progress. Studying Philosophy & Reason provides students with the skills of collaboration and communication that are essential components of informed participation in the 21st century.

#### Pathways

A course of study in Philosophy & Reason can establish a basis for further education and employment in a broad range of fields, including business, defence, education, ethics, health sciences, journalism, law, politics, professional writing, psychology and research.

# **Objectives**

- define and use terminology
- explain concepts, methods, principles and theories
- interpret and analyse arguments, ideas and information
- organise and synthesise ideas and information to construct arguments
- evaluate claims and arguments inherent in theories and views
- create responses that communicate meaning to suit purpose.

Unit 1	Unit 2	Unit 3	Unit 4
Fundamentals of reason	Reason in philosophy	Moral philosophy and schools of thought	Social and political philosophy
<ul> <li>Fundamentals of reason</li> </ul>	<ul> <li>Philosophy of religion</li> <li>Philosophy of science</li> <li>Philosophy of mind</li> </ul>	<ul> <li>Moral philosophy</li> <li>Philosophical schools of thought</li> </ul>	<ul><li>Rights</li><li>Political philosophy</li></ul>

# Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): •Examination — extended response	25%	Summative internal assessment 3 (IA3): •Analytical essay	25%
Summative internal assessment 2 (IA2): • Analytical essay	25%	Summative external assessment (EA): • Examination — extended response	25%

# **Physical Education**

The Physical Education syllabus is developmental and becomes increasingly complex across the four units. In Unit 1, students develop an understanding of the fundamental concepts and principles underpinnina their learning of movement sequences and how they can enhance movement from a biomechanical perspective. In Unit 2, students broaden their perspective by determining the psychological factors, barriers and enablers that influence their performance and engagement in physical activity. In Unit 3, students enhance their understanding of factors that develop tactical awareness and influence ethical behaviour of their own and others' performance in physical activity. In Unit 4, students explore energy, fitness and training concepts and principles to optimise personal performance.

Students learn experientially through three stages of an inquiry approach to ascertain relationships between the scientific bases and the physical activity contexts. Students recognise and explain concepts and principles about and through movement, and demonstrate and apply body and movement concepts to movement sequences and movement strategies. Through their purposeful and authentic experiences in physical activities, students gather, analyse and synthesise data to devise strategies to optimise engagement and performance. They evaluate and justify strategies about and in movement by drawing on informed, reflective decision-making.

Physically educated learners develop the 21st century skills of critical thinking, creative thinking, communication, personal and social skills, collaboration and teamwork, and information and communication technologies skills through rich and

# **General subject**

diverse learning experiences about, through and in physical activity. Physical Education fosters an appreciation of the values and knowledge within and across disciplines, and builds on students' capacities to be self-directed, work towards specific goals, develop positive behaviours and establish lifelong active engagement in a wide range of pathways beyond school.

#### **Pathways**

A course of study in Physical Education can establish a basis for further education and employment in the fields of exercise science, biomechanics, the allied health professions, psychology, teaching, sport journalism, sport marketing and management, sport promotion, sport development and coaching.

#### **Objectives**

- recognise and explain concepts and principles about movement
- demonstrate specialised movement sequences and movement strategies
- apply concepts to specialised movement sequences and movement strategies
- analyse and synthesise data to devise strategies about movement
- evaluate strategies about and in movement
- justify strategies about and in movement
- make decisions about and use language, conventions and mode-appropriate features for particular purposes and contexts.

Unit 1	Unit 2	Unit 3	Unit 4
Motor learning, functional anatomy and biomechanics in physical activity	Sport psychology and equity in physical activity	Tactical awareness and ethics in physical activity	Energy, fitness and training in physical activity
<ul> <li>Motor learning in physical activity</li> </ul>	<ul> <li>Sport psychology in physical activity</li> </ul>	<ul> <li>Tactical awareness in physical activity</li> </ul>	<ul> <li>Energy, fitness and training integrated in physical activity</li> </ul>
<ul> <li>Functional anatomy and biomechanics in physical activity</li> </ul>	<ul> <li>Equity — barriers and enablers</li> </ul>	• Ethics and integrity in physical activity	

### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4

Summative internal assessment 2 (IA2): • Investigation — report	25%	Summative external assessment (EA): • Examination — combination response	25%

# Physics

Physics provides opportunities for students to with the classical and modern engage understandings of the universe. In Unit 1, students learn about the fundamental concepts of thermodynamics, electricitv and nuclear processes. In Unit 2, students learn about the concepts and theories that predict and describe the linear motion of objects. Further, they will explore how scientists explain some phenomena using an understanding of waves. In Unit 3, students engage with the concept of gravitational and electromagnetic fields, and the relevant forces associated with them. Finally, in Unit 4, students study modern physics theories and models that, despite being counterintuitive, are fundamental to our understanding of many common observable phenomena.

Students will learn valuable skills required for the scientific investigation of questions. In addition, they will become citizens who are better informed about the world around them, and who have the critical skills to evaluate and make evidence-based decisions about current scientific issues.

Physics aims to develop students':

- appreciation of the wonder of physics and the significant contribution physics has made to contemporary society
- understanding that diverse natural phenomena may be explained, analysed and predicted using concepts, models and theories that provide a reliable basis for action
- understanding of the ways in which matter and energy interact in physical systems across a range of scales
- understanding of the ways in which models and theories are refined, and new models and theories are developed in physics; and how physics knowledge is used in a wide range of

- contexts and informs personal, local and global issues
  - investigative skills, including the design and conduct of investigations to explore phenomena and solve problems, the collection and analysis of qualitative and quantitative data, and the interpretation of evidence
  - ability to use accurate and precise measurement, valid and reliable evidence, and scepticism and intellectual rigour to evaluate claims
  - ability to communicate physics understanding, findings, arguments and conclusions using appropriate representations, modes and genres.

#### **Pathways**

A course of study in Physics can establish a basis for further education and employment in the fields of science, engineering, medicine and technology.

#### **Objectives**

By the conclusion of the course of study, students will:

- describe ideas and findings
- apply understanding
- analyse data
- interpret evidence
- evaluate conclusions, claims and processes
- investigate phenomena.

# **General subject**

Unit 1	Unit 2	Unit 3	Unit 4

Summative internal assessment 2 (IA2): • Student experiment	20%		
Summative external assessment (EA): 50%     Examination — combination response		ssessment (EA): 50% mbination response	

# Psychology

Psychology provides opportunities for students to engage with concepts that explain behaviours and underlying cognitions. In Unit 1, students examine individual development in the form of the role of the brain, cognitive development, human consciousness and sleep. In Unit 2, students investigate the concept of intelligence, the process of diagnosis and how to classify psychological disorder and determine an effective treatment, and lastly, the contribution of emotion and motivation on the individual behaviour. In Unit 3, students examine individual thinking and how it is determined by the brain, including perception, memory, and learning. In Unit 4, students consider the influence of others by examining theories of social psychology, interpersonal processes, attitudes and cross-cultural psychology.

Psychology aims to develop students':

- interest in psychology and their appreciation for how this knowledge can be used to understand contemporary issues
- appreciation of the complex interactions, involving multiple parallel processes that continually influence human behaviour
- understanding that psychological knowledge has developed over time and is used in a variety of contexts, and is informed by social, cultural and ethical considerations ability to conduct a variety of field research and laboratory investigations involving collection and analysis of qualitative

and quantitative data and interpretation of evidence

- ability to critically evaluate psychological concepts, interpretations, claims and conclusions with reference to evidence
- ability to communicate psychological understandings, findings, arguments and conclusions using appropriate representations, modes and genres.

#### **Pathways**

A course of study in Psychology can establish a basis for further education and employment in the fields of psychology, sales, human resourcing, training, social work, health, law, business, marketing and education.

## **Objectives**

By the conclusion of the course of study, students will:

- describe ideas and findings
- apply understanding
- analyse data
- interpret evidence
- evaluate conclusions, claims and processes
- investigate phenomena.

Unit 1	Unit 2	Unit 3	Unit 4
Individual development	Individual behaviour	Individual thinking	The influence of others
<ul> <li>The role of the brain</li> <li>Cognitive development</li> <li>Consciousness, attention and sleep</li> </ul>	<ul> <li>Intelligence</li> <li>Diagnosis</li> <li>Psychological disorders and treatments</li> <li>Emotion and motivation</li> </ul>	<ul> <li>Brain function</li> <li>Sensation and perception</li> <li>Memory</li> <li>Learning</li> </ul>	<ul> <li>Social psychology</li> <li>Interpersonal processes</li> <li>Attitudes</li> <li>Cross-cultural psychology</li> </ul>

### **Structure**

# Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Data test	10%	Summative internal assessment 3 (IA3): • Research investigation	20%
Summative internal assessment 2 (IA2): • Student experiment	20%		
Summative external assessment (EA): 50% <ul> <li>Examination — combination response</li> </ul>			

# **Religion & Ethics**

A sense of purpose and personal integrity are essential for participative and contributing members of society. Religion & Ethics allows students to explore values and life choices and the ways in which these are related to beliefs and practices as they learn about religion, spirituality and ethics. In addition, it enables students to learn about and reflect on the richness of religious, spiritual and ethical worldviews.

In this syllabus, religion is understood as a faith tradition based on a common understanding of beliefs and practices. In a religious sense, beliefs are tenets, creeds or faiths; religious belief is belief in a power or powers that influence human behaviours. Ethics refers to a system of moral principles; the rules of conduct or approaches to making decisions for the good of the individual and society. Both religion and ethics prompt questions about values, the determination of a moral course of action, and what personal and community decisions can be considered when confronted with situations requiring significant decisions.

Religion & Ethics enhances students' understanding of how personal beliefs, values, spiritual and moral identity are shaped and influenced by factors such as family, culture, gender and social issues. It allows for flexible courses of study that recognise the varied needs and interests of students through exploring topics such as the meaning of life, purpose and destiny, life choices, moral and ethical issues and social justice.

Religion & Ethics focuses on the personal, relational and spiritual perspectives of human experience. It enables students to investigate and critically reflect on the role and function of religion and ethics in society and to communicate principles and ideas relevant to their lives and the world.

Learning experiences should be practical and experiential in emphasis and access the benefits

# **Applied subject**

of networking within the community. Schools may consider involvement with religious communities, charities, welfare and service groups and organisations. The syllabus enables students to interact with the ideas and perspectives of members of the wider community who may express beliefs and values different from their own.

Students develop effective decision-making skills and learn how to plan, implement and evaluate inquiry processes and outcomes, resulting in improved 21st century, literacy and numeracy skills. They examine religion and ethics information and apply their understanding and skills related to community contexts. The knowledge and skills developed in Religion & Ethics provide students with the ability to participate effectively in the changing world around them as active and engaged citizens dealing with religious, spiritual and ethical issues.

#### **Pathways**

A course of study in Religion & Ethics can establish a basis for further education and employment in any field. Students gain skills and attitudes that contribute to lifelong learning and the basis for engaging with others in diverse settings.

#### **Objectives**

- explain religions, spiritual and ethical principles and practices
- examine religions, spiritual and ethical information
- apply religious, spiritual and ethical knowledge
- communicate responses
- evaluate projects.

Religion & Ethics is a four-unit course of study. This syllabus contains six QCAA-developed units as options for schools to select from to develop their course of study.

Unit option	Unit title
Unit option A	Australian identity
Unit option B	Social justice
Unit option C	Meaning, purpose and expression
Unit option D	World religions and spiritualities
Unit option E	Peace
Unit option F	Sacred stories

### Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Religion & Ethics are:

Technique	Description	Response requirements
Project	roject Students provide a view on a	Product/Plan/Campaign - One of the following:
	scenario.	• Multimodal (at least two modes delivered at the same time): up to 5 minutes, or 6 A4 pages, or equivalent digital media
		• Spoken: up to 4 minutes, or signed equivalent
		Written: up to 600 words
		Evaluation - One of the following:
		• Multimodal (at least two modes delivered at the same time): up to 4 minutes, or 4 A4 pages, or equivalent digital media
		• Spoken: up to 3 minutes, or signed equivalent
		• Written: up to 400 words
Investigation	Students investigate a	One of the following:
question, opportunity or issue to develop a response.	• Multimodal (at least two modes delivered at the same time): up to 7 minutes, or 10 A4 pages, or equivalent digital media	
		• Spoken: up to 7 minutes, or signed equivalent
		• Written: up to 1000 words
Extended response	Students respond to stimulus	One of the following:
related to a scenario.	• Multimodal (at least two modes delivered at the same time): up to 7 minutes, or 10 A4 pages, or equivalent digital media	
		• Spoken: up to 7 minutes, or signed equivalent
		Written: up to 1000 words

# **Social & Community Studies**

# Applied subject

Social & Community Studies fosters personal and social knowledge and skills that lead to selfmanagement and concern for others in the broader community. It empowers students to think critically, creatively and constructively about their future role in society.

Knowledge and skills to enhance personal development and social relationships provide the foundation of the subject. Personal development incorporates concepts and skills related to self-awareness and self-management, including understanding personal characteristics, behaviours and values; recognising perspectives; analysing personal traits and abilities; and using strategies to develop and maintain wellbeing.

The focus on social relationships includes concepts and skills to assist students engage in constructive interpersonal relationships, as well as participate effectively as members of society, locally, nationally or internationally.

Students engage with this foundational knowledge and skills through a variety of topics that focus on lifestyle choices, personal finance, health, employment, technology, the arts, and Australia's place in the world, among others. In collaborative learning environments, students use an inquiry approach to investigate the dynamics of society and the benefits of working thoughtfully with others in the community, providing them with the knowledge and skills to establish positive relationships and networks, and to be active and informed citizens.

Social & Community Studies encourages students to explore and refine personal values and lifestyle choices. In partnership with families, the school community and the community beyond school, including virtual communities, schools may offer a range of contexts and experiences that provide students with opportunities to practise, develop and value social, community and workplace participation skills.

### **Pathways**

A course of study in Social & Community Studies can establish a basis for further education and employment, as it helps students develop the skills and attributes necessary in all workplaces.

# Objectives

- explain personal and social concepts and skills
- examine personal and social information
- apply personal and social knowledge
- communicate responses
- evaluate projects.

Social & Community Studies is a four-unit course of study. This syllabus contains six QCAA-developed units as options for schools to select from to develop their course of study.

Unit option	Unit title
Unit option A	Lifestyle and financial choices
Unit option B	Healthy choices for mind and body
Unit option C	Relationships and work environments
Unit option D	Legal and digital citizenship
Unit option E	Australia and its place in the world
Unit option F	Arts and identity

## Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Social & Community Studies are:

Technique	Description	Response requirements
Project	Project Students develop recommendations or provide advice to address a selected issue related to the unit	Item of communication - One of the following:
		<ul> <li>Multimodal (at least two modes delivered at the same time): up to 5 minutes, 6 A4 pages, or equivalent digital media</li> </ul>
		Spoken: up to 4 minutes, or signed equivalent

Investigation	Students investigate an issue	One of the following:
collecting and examining information to consider solutions and form a	<ul> <li>Multimodal (at least two modes delivered at the same time): up to 7 minutes, 10 A4 pages, or equivalent digital media</li> </ul>	
	response.	Spoken: up to 7 minutes, or signed equivalent
		Written: up to 1000 words

# **Specialist Mathematics**

Mathematics is a unique and powerful intellectual discipline that is used to investigate patterns, order, generality and uncertainty. It is a way of thinking in which problems are explored and solved through observation, reflection and logical reasoning. It uses a concise system of communication, with written, symbolic, spoken and visual components. Mathematics is creative, requires initiative and promotes curiosity in an increasingly complex and data-driven world. It is the foundation of all quantitative disciplines.

To prepare students with the knowledge, skills and confidence to participate effectively in the community and the economy requires the development of skills that reflect the demands of the 21st century. Students undertaking Mathematics will develop their critical and creative thinking, oral and written communication, information & communication technologies (ICT) capability, ability to collaborate, and sense of personal and social responsibility - ultimately becoming lifelong learners who demonstrate initiative when facing a challenge. The use of technology to make connections between mathematical theory, practice and application has a positive effect on the development of conceptual understanding and student disposition towards mathematics.

Mathematics teaching and learning practices range from practising essential mathematical routines to develop procedural fluency, through to investigating scenarios, modelling the real world, solving problems and explaining reasoning. When students achieve procedural fluency, they carry out procedures flexibly, accurately and efficiently. When factual knowledge and concepts come to mind readily, students are able to make more complex use of knowledge to successfully formulate, represent and solve mathematical problems. Problem-solving helps to develop an ability to transfer mathematical skills and ideas between different contexts. This assists students to make connections between related concepts and adapt what they already know to new and unfamiliar situations. With appropriate effort and experience, through discussion, collaboration and

reflection of ideas, students should develop confidence and experience success in their use of mathematics.

The major domains of mathematical knowledge in Specialist Mathematics are Vectors and matrices, Real and complex numbers, Trigonometry, Statistics and Calculus. Topics are developed increasing systematically, with levels of sophistication, complexity and connection. building on functions, calculus, statistics from Mathematical Methods, while vectors, complex numbers and matrices are introduced. Functions and calculus are essential for creating models of the physical world. Statistics are used to describe and analyse phenomena involving probability, uncertainty and variation. Matrices, complex numbers and vectors are essential tools for explaining abstract or complex relationships that occur in scientific and technological endeavours.

Students who undertake Specialist Mathematics will develop confidence in their mathematical knowledge and ability, and gain a positive view of themselves as mathematics learners. They will gain an appreciation of the true nature of mathematics, its beauty and its power.

#### **Pathways**

A course of study in Specialist Mathematics can establish a basis for further education and employment in the fields of science, all branches of mathematics and statistics, computer science, medicine, engineering, finance and economics.

#### **Objectives**

- recall mathematical knowledge
- use mathematical knowledge
- communicate mathematical knowledge
- evaluate the reasonableness of solutions
- justify procedures and decisions
- solve mathematical problems.

Specialist Mathematics is to be undertaken in conjunction with, or on completion of, Mathematical Methods.

Unit 1	Unit 2	Unit 3	Unit 4
Combinatorics, proof, vectors and matrices	Complex numbers, further proof,	Further complex numbers, proof, vectors	Further calculus and statistical inference

### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Problem-solving and modelling task	20%	Summative internal assessment 3 (IA3): • Examination — short response	15%
Summative internal assessment 2 (IA2): • Examination — short response	15%		

Summative external assessment (EA): 50%
Examination — combination response

# **Study of Religion**

# **General subject**

Study of Religion is the investigation and study of religious traditions and how religion has influenced, and continues to influence, people's lives. As religions are living traditions, a variety of religious expressions exists within each tradition. Religious beliefs and practices also influence the social, cultural and political lives of people and nations. Students become aware of their own religious beliefs, the religious beliefs of others, and how people holding such beliefs are able to co-exist in modern society.

In this subject, students study the five major world religions of Judaism, Christianity, Islam, Hinduism and Buddhism; and Australian Aboriginal spiritualities and Torres Strait Islander religion. Each tradition is explored through the lens of the nature and purpose of religion, sacred texts that offer insights into life, and the rituals that mark significant moments and events in the religion itself and in the lives of adherents. Nature and purpose of religion, sacred texts, and rituals provide the foundations for understanding religious ethics and the ways religion functions in society and culture.

Throughout the course of study, students engage with an inquiry approach to learning about religions, their central beliefs and practices, and their influence on individuals, groups and society. As a result, a logical and critical approach to understanding the influence of religion should be developed, with judgments supported through valid and reasoned argument. This contributes to the development of a range of transferable thinking and processing skills that will help students to live and work successfully in the 21st century.

Study of Religion allows students to develop critical thinking skills, including those of analysis, reasoning and evaluation, as well as communication skills that support further study and post-school participation in a wide range of fields. The subject contributes to students becoming informed citizens, as reliaion continues to function as a powerful dimension of human experience. Through recognising the factors that contribute to different religious expressions, students develop empathy and respect for the ways people think, feel and act religiously, as well as a critical awareness of the religious diversity that exists locally and globally.

#### **Pathways**

A course of study in Study of Religion can establish a basis for further education and employment in such fields as anthropology, the arts, education, journalism, politics, psychology, religious studies, sociology and social work.

### **Objectives**

- explain features and expressions of religious traditions
- analyse perspectives about religious expressions
- evaluate the significance and influence of religion
- communicate meaning to suit purpose.

Unit 1	Unit 2	Unit 3	Unit 4
<ul> <li>Religion, meaning and purpose</li> <li>Nature and purpose of religion</li> <li>Sacred texts</li> </ul>	<ul><li>Religion and ritual</li><li>Lifecycle rituals</li><li>Calendrical rituals</li></ul>	<ul><li>Religious ethics</li><li>Social ethics</li><li>Personal ethics</li></ul>	<ul> <li>Religion — rights and relationships</li> <li>Religion and the nation–state</li> <li>Human existence and rights</li> </ul>

### Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4	
Summative internal assessment 1 (IA1): • Examination — extended response	25%	Summative internal assessment 3 (IA3): • Investigation — inquiry response	25%
Summative internal assessment 2 (IA2): • Investigation — inquiry response	25%	Summative external assessment (EA): • Examination — short response	25%

# Tourism

**Applied subject** 

Tourism is one of the world's largest industries and one of Australia's most important industries, contributing to gross domestic product and employment.

The term 'tourism industry' describes the complex and diverse businesses and associated activities that provide goods and services to tourists who may be engaging in travel for a range of reasons, including leisure and recreation, work, health and wellbeing, and family.

This subject is designed to give students opportunities to develop a variety of intellectual, technical, creative, operational and workplace skills. It enables students to gain an appreciation of the role of the tourism industry and the structure, scope and operation of the related tourism sectors of travel, hospitality and visitor services.

In Tourism, students examine the sociocultural, environmental and economic aspects of tourism, as well as opportunities and challenges across global, national and local contexts. Tourism provides opportunities for Queensland students to develop understandings that are geographically and culturally significant to them by, for example, investigating tourism activities related to local Aboriginal communities and Torres Strait Islander communities and tourism in their own communities.

The core of Tourism focuses on the practices and approaches of tourism and tourism as an

industry; the social, environmental, cultural and economic impacts of tourism; client groups and their needs and wants, and sustainable approaches in tourism. The core learning is embedded in each unit. The objectives allow students to develop and apply tourism-related knowledge through learning experiences and assessment in which they plan projects, analyse challenges and opportunities, make decisions, and reflect on processes and outcomes.

#### Pathways

A course of study in Tourism can establish a basis for further education and employment in businesses and industries such as tourist attractions, cruising, gaming, government and industry organisations, meeting and events coordination, caravan parks, marketing, museums and galleries, tour operations, wineries, cultural liaison, tourism and leisure industry development, and transport and travel.

#### **Objectives**

By the conclusion of the course of study, students should:

- explain tourism principles, concepts and practices
- examine tourism data and information
- apply tourism knowledge
- communicate responses
- evaluate projects.

## Structure

Tourism is a four-unit course of study. This syllabus contains five QCAA-developed units as options for schools to select from to develop their course of study.

Unit option	Unit title
Unit option A	Tourism and travel
Unit option B	Tourism marketing
Unit option C	Tourism trends and patterns
Unit option D	Tourism regulation
Unit option E	Tourism industry and careers

# Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Tourism are:

Technique	Description	Response requirements
Investigation	nvestigation Students investigate a unit related context by collecting and examining data and information.	One of the following:
		<ul> <li>Multimodal (at least two modes delivered at the same time): up to 7 minutes, 10 A4 pages, or equivalent digital media</li> </ul>
		• Spoken: up to 7 minutes, or signed equivalent
		• Written: up to 1000 words
Project	Project Students develop a traveller information package for an international tourism destination.	Product - One of the following:
		<ul> <li>Multimodal (at least two modes delivered at the same time): up to 3 minutes, 6 A4 pages, or equivalent digital media</li> </ul>
		• Spoken: up to 3 minutes, or signed equivalent
		• Written: up to 500 words
		Evaluation - One of the following:
		<ul> <li>Multimodal (at least two modes delivered at the same time): up to 3 minutes, 4 A4 pages, or equivalent digital media</li> </ul>
		Spoken: up to 3 minutes, or signed equivalent
		• Written: up to 500 words

# Visual Art

Visual Art students have opportunities to and construct knowledge communicate personal interpretations by working as both artist and audience. In making artworks, students use their imagination and creativity to innovatively solve problems and experiment with visual language and expression. Students develop knowledge and skills when they create individualised responses and meaning by applying diverse art materials, techniques, technologies and processes. On their individual journey of exploration, students learn to communicate personal thoughts, feelings, ideas, experiences and observations. In responding to artworks, students investigate artistic expression and critically analyse artworks in diverse contexts. They consider meaning, purposes and theoretical approaches when ascribing aesthetic value and challenging ideas. Students interact with artists, artworks, institutions and communities to enrich their experiences and understandings of their own and others' art practices.

Visual Art uses an inquiry learning model, developing critical and creative thinking skills and individual responses through developing, researching, reflecting and resolving. Through making and responding, resolution and display of artworks, students understand and appreciate the role of visual art in past and present traditions and cultures, as well as the contributions of contemporary visual artists and their aesthetic, historical and cultural influences.

### **Pathways**

This subject prepares young people for participation in the 21st century by fostering curiosity and imagination, and teaching students how to generate and apply new and creative solutions when problem-solving in a range of contexts. This learnt ability to think in divergent ways and produce creative and expressive responses enables future artists, designers and craftspeople to innovate and collaborate with the fields of science, technology, engineering and mathematics to design and manufacture images and objects that enhance and contribute significantly to our daily lives.

Visual Art prepares students to engage in a multimodal, media-saturated world that is reliant on visual communication. Through the critical thinking and literacy skills essential to both artist and audience, learning in Visual Art empowers young people to be discriminating, and to engage with and make sense of what they see and experience.

A course of study in Visual Art can establish a basis for further education and employment in the fields of arts practice, design, craft, and information technologies, and more broadly, in creative industries, cultural institutions, advertising, administration and management, communication, education, public relations, health, research, science and technology.

#### **Objectives**

- implement ideas and representations
- apply literacy skills
- analyse and interpret visual language, expression and meaning in artworks and practices
- evaluate influences
- justify viewpoints
- experiment in response to stimulus
- create visual responses using knowledge and understanding of art media
- realise responses to communicate meaning.

Unit 1	Unit 2	Unit 3	Unit 4
Art as lens	Art as code	Art as knowledge	Art as alternate
<ul> <li>Concept: lenses to explore the material world</li> </ul>	<ul> <li>Concept: art as a coded visual language</li> </ul>	<ul> <li>Concept: constructing knowledge as artist and audience</li> </ul>	<ul> <li>Concept: evolving alternate representations and meaning</li> <li>Contexts: contemporary, personal, cultural and/or formal</li> </ul>
<ul> <li>Contexts: personal and contemporary</li> <li>Focus: people, place, objects</li> </ul>	<ul> <li>Contexts: formal and cultural</li> <li>Focus: codes, symbols, signs and art conventions</li> </ul>	<ul> <li>Contexts: contemporary, personal, cultural and/or formal</li> <li>Focus: student-</li> </ul>	
		directed	• Focus: student-directed

## Assessment

Schools devise assessments in Units 1 and 2 to suit their local context.

In Units 3 and 4 students complete *four* summative assessments. The results from each of the assessments are added together to provide a subject score out of 100. Students will also receive an overall subject result (A–E).

Unit 3		Unit 4			
Summative internal assessment 1 (IA1): • Investigation — inquiry phase 1		Summative internal assessment 3 (IA3): • Project — inquiry phase 3	30%		
Summative internal assessment 2 (IA2): • Project — inquiry phase 2					
Summative external assessment (EA): 25% • Examination — extended response					

# **Visual Arts in Practice**

The arts are woven into the fabric of community. They have the capacity to engage and inspire students, enriching their lives, stimulating curiosity and imagination, and encouraging them to reach their creative and expressive potential. Arts subjects provide opportunities for students to learn problem-solving processes, design and create art, and use multiple literacies to communicate intention with diverse audiences.

In Visual Arts in Practice, students respond to authentic, real-world stimulus (e.g. problems, events, stories, places, objects, the work of artists or artisans), seeing or making new links between art-making purposes and contexts. They explore visual language in combination with media, technologies and skills to make artworks. Throughout the course, students are exposed to two or more art-making modes, selecting from 2D, 3D, digital (static) and timebased and using these in isolation or combination, as well as innovating new ways of working.

When responding, students use analytical processes to identify problems and develop plans or designs for artworks. They use reasoning and decision-making to justify their choices, reflecting and evaluating on the success of their own and others' art-making. When making, students demonstrate knowledge and understanding of visual features to communicate artistic intention. They develop competency with and independent selection of

media, technologies and skills as they make experimental and resolved artworks, synthesising ideas developed throughout the responding phase.

#### Pathways

Learning in Visual Arts in Practice is connected to relevant industry practice and opportunities, promoting future employment and preparing students as agile, competent, innovative and safe workers who can work collaboratively to solve problems and complete project-based work in various contexts.

A course of study in Visual Arts in Practice can establish a basis for further education and employment in a range of fields, including creative industries, education, advertising and marketing, communications, humanities, health, recreation, science and technology.

#### **Objectives**

- use visual arts practices
- plan artworks
- communicate ideas
- evaluate artworks.

Visual Arts in Practice is a four-unit course of study. This syllabus contains four QCAA-developed units as options for schools to combine in any order to develop their course of study.

Unit option	Unit title
Unit option A	Looking inwards (self)
Unit option B	Looking outwards (others)
Unit option C	Clients
Unit option D	Transform & extend

#### Assessment

Students complete two assessment tasks for each unit. The assessment techniques used in Visual Arts in Practice are:

Technique	Description	Response requirements
Project	Project Students make experimental or prototype artworks, or design proposals or stylistic experiments. They evaluate artworks, art style and/or practices that explore the focus of the unit. Students plan resolved artworks.	<b>Experimental folio</b> Up to 8 experimental artworks: 2D, 3D, digital (static) and/or time-based OR
		<b>Prototype artwork</b> 2D, 3D, digital (static) and/or time-based media: up to 4 artwork/s
		OR
		<b>Design proposal</b> Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media, including up to 4 prototype artwork/s — 2D, 3D, digital (static) and/or time-based
		OR
		Folio of stylistic experiments Up to 8 experimental artworks: 2D, 3D, digital (static) and/or time-based
	AND	
		Planning and evaluations - One of the following:
		<ul> <li>Multimodal (at least two modes delivered at the same time): up to 5 minutes, 8 A4 pages, or equivalent digital media</li> </ul>
		Written: up to 600 words
		• Spoken: up to 4 minutes, or signed equivalent
Resolved artwork	Students make a resolved artwork that communicates	Resolved artwork
	purpose and context relating to the focus of the unit.	• 2D, 3D, digital (static) and/or time-based media: up to 4 artwork/s
# Appendix A Study at TAFE Options

# **TAFE at Schools Program – TAFE Queensland**

### Please note: TAFE at Schools Programs are not available to students who select an ATAR Pathway.

TAFE Queensland is the largest and most experienced provider of vocational education and training in the state. Year 11 and 12 students can choose to study from more than 50 exciting and varied certificate level vocational education and training (VET) courses. A TAFE at School certificate can be achieved in conjunction with your Senior studies whilst at school and count towards your Queensland Certificate of Education (QCE).

The TAFE at Schools Program offers students an on-campus experience attending class and/or sharing facilities with TAFE Queensland full-time students.

For any queries regarding the TAFE at Schools Program, either speak to Mr Darren Smith (Program Leader – Vocational Education Pathways) or email the team at TAFE Queensland - schools.brisbane@tafe.qld.edu.au

## **Benefits**

### Bypass QTAC with a Guaranteed Position

When you study a TAFE at School course, you are taking the first step on your path to higher education. Once you complete your TAFE at School certificate, you are guaranteed a place in any of TAFE Queensland's diploma courses. Many of the diploma courses have formal articulation arrangements with some of Australia's top universities.

### Trade Pathways

TAFE Queensland trade courses offer the perfect way for you to get the skills you need to secure an apprenticeship or traineeship in your dream career.

#### Earn credit toward the QCE

Vocational Education and Training (VET) can contribute up to 8 points (Certificate III) toward a student's Queensland Certificate Education (QCE) via completion of embedded certificates. TAFE at Schools programs are designed to contribute the maximum credit possible, whilst providing a solid underpinning knowledge of the field of study.

# Eligibility

TAFE at Schools is available to students beginning Year 11 in 2025. TAFE at Schools requires a commitment from students to achieve the benefits of an accelerated qualification, and maximum credit toward QCE.

All students who would like to participate in TAFE at Schools must have both parental and school consent. It is an ongoing requirement that students are undertaking their Senior studies at a participating school during the course of their TAFE at Schools enrolment.

Students should only consider undertaking the program if they are able to commit to ongoing attendance requirements in line with the TAFE Queensland Brisbane's academic calendar, and personal conduct that meets the expectations of the TQ Student Rules.

# How much does it cost?

Students undertaking a nationally accredited qualification at TAFE Queensland as part of their Senior studies may pay substantially reduced or, in some cases, no tuition fees at all. However, there are material fees for all programs and an administration fee per calendar year and you'll need to meet these costs.

# How do I enrol?

Your VET Coordinator can provide you with more information. If you would like to find out more about the enrolment process and discuss student rules and expectations, program plans or participate in a campus tour then speak to one of our friendly team members.

Interested? Contact the TAFE School team at schools.brisbane@tafe.qld.edu.au, call 07 3244 6123.

\*\*VET courses, as well as apprenticeships, are not available to overseas students.

# Appendix B School Based Apprenticeships and Traineeships

School-based apprenticeships and traineeships (SATs) allow high school students (usually in Years 11 or 12) to earn a wage, train towards a nationally recognised qualification and study towards their Queensland Certificate of Education at the same time. Use your SAT to kick-start your career and learn invaluable, real-life workplace skills and hands-on industry experience.

## Traineeships

A school-based traineeship usually takes 2–4 years to complete, depending on when you start it and the type and level of the qualification. If you don't complete your traineeship before graduating, you can continue it by converting to part-time or full-time and continuing to work with your employer until you complete.

### **Apprenticeships**

You can't complete your apprenticeship during high school because apprenticeships take longer than that. But you can start one at school, convert to part-time or full-time once you graduate and continue to work with your employer until you completed after another 2–3 years.

For example, if you start a 4-year full-time apprenticeship at the start of Year 11, you will usually have finished 1year full-time equivalent by graduation (because school-based apprenticeships take twice as long). To continue it after school, you'll need to do approximately another 3 years full-time. So, in total, it may take you 5 years to complete.

### How many hours you work

You are required to work at least 7.5 hours a week, averaged over every 3 months, for every 12 months of your training contract.

For example, if you can't work during exams, you can work more hours during the school holidays.

### How much you get paid

You get paid for the hours you work, but not necessarily for the hours you attend training.

### How training works

A training organisation will work with you and your employer to develop a training plan, which describes what, when and how you do your training. They also deliver all your training and assessment. Your training may be:

- online, with a trainer checking in on you regularly
- at work, with an on-site trainer
- in a class at a training organisation, like TAFE.

### How often you attend training

Depending on your apprenticeship or traineeship and training organisation, you might complete your training:

- online
- in the workplace, with a trainer who visits regularly
- with other students in a class environment on campus, either 1 or more days a week, or for a block (e.g. you might attend a 2-week block of classes during school holidays).

## How training counts towards your grades

Training can count towards final Queensland Certificate of Education (QCE) credit points.

Credits are based on the number of 'competencies'—knowledge or skills applied to a workplace—you complete and/or the number of hours you have worked.

# Appendix C Australian Qualifications Framework

The Australian Qualifications Framework is the national policy for regulated qualifications in Australian education and training. It incorporates the qualifications from each education and training sector into a single comprehensive national qualifications framework. The AQF was introduced in 1995 to underpin the national system of qualifications in Australia encompassing higher education, vocational education and training and schools.

One of the key objectives of the AQF is to facilitate pathways to, and through, formal qualifications. It also complements national regulatory and quality assurance arrangements for education and training. The AQF is split into 10 levels, ranging from certificate 1, all the way through to Doctoral degree, with higher education awards including levels 5-10. For more information on the individual AQF levels, visit the AQF's levels webpage.
